HERTFORDSHIRE.

THE CHURCH BELLS
OF
HERTFORDSHIRE:

*THEIR FOUNDERS, INSCRIPTIONS, TRADITIONS,
AND PECULIAR USES.*

BY THE LATE
THOMAS NORTH, F.S.A.,
HONORARY SECRETARY OF THE LEICESTERSHIRE ARCHÆOLOGICAL SOCIETY, ETC.

COMPLETED AND EDITED BY
J. C. L. STAHLSCHMIDT,
AUTHOR OF "SURREY BELLS AND LONDON BELL-FOUNDERS."

WITH ILLUSTRATIONS.

P R E F A C E .

FEW words are wanted from me to preface this work of my deceased friend, Mr. North. I am very thankful to his widow for entrusting the completion of it to my unworthy self.

At the time of his lamented death, the book was well advanced; nearly the whole of the material was in hand, and a large portion of the text written. My work, then, has been mainly to edit, with the exception of the chronological account of the Bells of Hertfordshire, which is entirely my own writing. I mention this specially, in order that Mr. North may not be criticised on account of any of the theories therein contained. If he erred at all, it was on the side of over-caution, and I am by no means sure, if he had, happily, survived to have written the chapter, that he would have dealt with the various groups of bells in the same way that I have done.

I have now to thank the many friends of his and mine who have given a helping hand, and in doing this, I fear that I shall be compelled to omit the names of some, perhaps of many. Mr. North left a careful list of all to whom he was indebted for rubbings or copies of inscriptions, but not of those who supplied him with other and valuable information, and I have had to gather them from a necessarily hasty perusal of a large mass of correspondence. I trust, therefore,

that any who are unmentioned by name will not deem us any the less grateful for their kindness.

For rubbings and copies of inscriptions thanks are primarily due to the Rev. W. J. Webber Jones, who energetically and zealously visited every part of the county on Mr. North's behalf, supplying the necessary information for no less than 72 churches.

Many thanks are also due to the following Clergy for similar information kindly supplied:—

The Rev. J. Aitken.
 „ F. B. Butler.
 „ A. Brooking.
 „ Bryant Burgess.
 „ W. Bone.
 „ J. W. Cobb.
 „ W. d'A. Crofton.
 „ H. C. Close
 „ W. T. Tyrwhitt Drake.
 „ W. Davis.
 „ E. R. Gardiner.
 „ J. Griffith.
 „ F. H. Hodgson.
 „ H. W. Hodgson.
 „ C. G. Lane.
 „ R. L. Loughborough.
 „ T. Marsden.
 „ D. C. Mackenzie.
 „ S. Nairne.
 „ R. H. Neate.
 „ G. J. Pierson.
 „ W. Quennell.

The Rev. J. J. Raven.
„ W. Roberts.
„ A. C. Richings.
„ E. Ryley.
„ G. M. Squibb.
„ H. T. Tilley.
„ Canon Vaughan.
„ E. T. Vaughan, junr.
„ R. M. Wood.
„ J. Wardale.
„ A. R. Wilson.
„ C. L. Wingfield.

To the following lay members of the Church like thanks are due :—

H. H. Gibbs, Esq.
John Evans, Esq., F.S.A.
C. E. Keyser, Esq., F.S.A.
J. E. K. Cutts, Esq.
W. Osborn Boyes, Esq., LL.D.
W. R. Baker, Esq.
O. Foster, Esq., M.D.
A. T. Perkins, Esq.
E. J. Lake, Esq.
W. A. Jacob, Esq.
H. G. Daubeny, Esq., and
Mr. G. M. Bates.

For other antiquarian information we are indebted to the Rev. W. G. Dimock Fletcher, to Mr. J. L. Glasscock, junr., the Rev. J. G. Hale, Rev. A. C. Pearson, Rev. W. Wigram Rev. Alex. Buchanan, Rev. W. Bonsey, J. E. Fordham, Esq.,

Walford D. Selby, Esq., J. A. C. Vincent, Esq., and John Harris, Esq., and doubtless to many others.

Very many thanks are due to A. D. Tyssen, Esq., for the kindly loan of wood-blocks for many of the illustrations in the following pages.

J. C. L. STAHLSCHMIDT.

FONTENOY ROAD, BALHAM,

January, 1886.

THE CHURCH BELLS OF HERTFORDSHIRE.

PART I.

THERE are now in the Hertfordshire churches 712 church bells. That number includes 21 priest's and other small ones. The 691 large bells are thus distributed:—

3	Rings of	10	bells	...	30
16	„	„	8 „	...	128
35	„	„	6 „	...	210
28	„	„	5 „	...	140
5	„	„	4 „	...	20
24	„	„	3 „	...	72
16	„	„	2 „	...	32
Single	bells		59
					691

To these 712 church bells may be added, as worthy of notice, the clock and the market bells in the Clock Tower at St. Albans, the clock and two-quarter bells in that at Hoddesdon, and the bell in the Clock Tower at Layston—thus

making a total of 718 bells to be described. Chronologically these may be classified as follows :

Pre-Reformation	...	31
1560 to 1600	...	21
1601 to 1700	...	188
1701 to 1800	...	221
1801 to 1884	...	228
Doubtful (uninscribed)		29
		718

It thus appears that only the very small number of 52—or a trifle over 7 per cent.—can be positively said to have been cast in or before the year 1600. This proportion of “ancients” is the smallest that has yet been found in any one county—with the sole exception of Surrey, where the percentage is only $3\frac{1}{2}$; Bedfordshire having 9 per cent.; Northants, $10\frac{1}{2}$; Sussex, $13\frac{1}{3}$; Leicestershire, $14\frac{3}{4}$; Rutland, 16; Norfolk, about the same; and Lincoln, $17\frac{1}{2}$ per cent.

There is only one complete ring (if two are worthy of that name) of certainly ancient bells now hanging in the county—that of two at Clothall. The two at Little Hornead are also both probably ancients; but as the smaller one is devoid of inscription, it is impossible to speak positively. The single remaining bell at Letchworth is also ancient, and, having its inscription in Lombardic letters, may fairly be ascribed to the fourteenth century.

From the inventories of Church Goods made by the Royal Commissioners in 1552 (which have been transcribed and published by Mr. J. E. Cussans) we are able to ascertain exactly the number of church bells then existing in the county. And it would seem that, unlike Lincolnshire and

some other counties, the old parish churches of Hertfordshire have suffered very little loss in the number of their church bells since the date of those Edwardian inventories. There were then 477 great bells and 150 sanctus bells—or a total of 627; there are now, as has already been stated, a total of 712. This increase is owing to a considerable extent to the formation of new parishes and districts, and the consequent erection of new churches. Many of the rings in the town churches have also, as will be seen, been augmented in the number of their bells for change-ringing.

It must not, however, be supposed that the Hertfordshire folk were altogether proof against the temptations of the times. Not to mention here the robbery of the bells of the chapel of Allswike and the unlawful sale of a bell belonging to Much Hadham—both in the reign of Henry VIII.—we find that several of the parish churches suffered in later times from the cupidity or neglect of those whose duty it was to protect and preserve the church property. Thus the second bell at Letchworth has disappeared, tradition being silent as to the how and when. At Hexton again—where the inventories note four great bells, and where the pits for five still exist—there are now only three to be found.

Albury too having a bell cracked, it was removed from its frame and was afterwards stolen. The ancient churches of Ayot St. Laurence, Ayot St. Peter, and Bayford lost their old bells when new churches were built. Bovington lost two bells about a century ago, when they were probably removed to enrich the mother church of Hemel Hempstead. Several churches lost bells in an unexplained manner; for instance, Bramfield, Caldecote, Long Marston, Throcking, and Newnham have each lost two—the last-mentioned parish within

memory ; and Buckland, Bygrave, Little Gaddesden, Lilley, Totteridge, and Wormley, one each. Gilston lost a bell—and there is no talk of its restoration—during the preparation of the work, for the not very good reason that it was of very thin metal and out of tune. Two bells at Flaunden, two at Pelham Stocking, and one at Wigginton were sold, apparently, in each case to raise money to pay for repairs ; but the most reprehensible transaction was that enacted by the Welwyn folk, who, having a ring of five bells sold them, in 1746, in order to raise money to erect a turret, “or some other conveniency,” for the hanging up of a single large bell and a priest’s bell, and those two are still all the bells they possess. Northaw has been unfortunate ; the church there lost, in some unexplained manner, two of its three Edwardian bells before the disastrous fire in 1881, when the third one was melted and also lost. The good people of Sandridge lost a bell, and cannot make up their minds whether their ancestors sold it to Wheathampstead or their neighbours at Hatfield stole it : the solution must be left to them, as no documentary evidence is forthcoming.

The dedications and legends of the fifty-two ancients may thus be classified. Five have reference to the Blessed Virgin : *E.g.* the 3rd at Ardeley, inscribed—

+ VOCOR : MARIA

the second at Hexton, which has—

+ AVE : MARIA

the bell at Letchworth before mentioned, bearing—

+ AVE : MARIA : GRACIA : PLENA

An unhung bell at Barkway has a similar inscription, but in black letter, and correctly spelled, while the 2nd at Little Berkhamstead has the angelic salutation in full—

+ AVE MARIA GRACIA PLENA DOMINVS TECVM BENEDICTATV
IN MVLIERIBVS

Three bells (the 6th at Ardeley, the 5th at Kimpton, and the 4th at Little Munden) are inscribed with the not uncommon legend, "SIT NOMEN DOMINI BENEDICTUM."

The 3rd at Bushey has the suffrage—

Sancta Trinitas Unus Deus Miserere Nobis

The 2nd at Bramfield bears the leonine hexameter—

Christus Perpetue Det Nobis Gaudia Vitae

Both the 1st and 2nd at Albury have a similar triple invocation for protection—

Hoc Signum Serva Npi Maria Thoma

Of dedications to Saints and Angels we have the following :

To St. Katharine (a favourite Saint for bell-dedications—probably from the connection both of Saint and bell with a wheel) there are three—

Pelham Furneaux 4th.

Widford 3rd.

Wyddial 2nd.

Two are dedicated to St. Margaret—

Little Hornead 2nd.

Westmill 3rd.

Two to St. Peter—

Little Munden 2nd.

Norton 2nd.

Two to the Archangel Gabriel—an appropriate dedication for a bell used to ring the “Angelus”—

Little Hadham 2nd.

St. Albans clock bell.

The Clock Tower bell at Hoddesdon is dedicated to St. Ann; the sole remaining bell at Pelham Stocking to St. Vincent; the Anstey tenor to St. George; the 4th at Harpenden to the Archangel Michael; and the treble at Wadesmill to St. John Baptist. While to purely English Saints we find dedications at Eastwick (the 2nd), to St. Augustine; and Kimpton (4th), to St. Dunstan.

The very common medieval inscription (somewhat mangled however)—

In Multis annis Resonat Campana Iohanes

appears on the 3rd at Harpenden, in this case with the date 1571, and thus a rather curious instance of “survival.”

The Elizabethan bells, as a rule, bear only the founder’s name and the date; the following are exceptions: the 2nd at Flaunden, which has—

Gloria in excelsis Deo 1578

the 5th at Hemel Hempstead, which bears, without date—

laud ate do mini

and the 5th at Braughing, bearing—

deus in adiutoriu meu in fende

and in addition the date 1562 and the initials I C—doubtless those of the founder, as will be seen later on in the detailed account of the bells.

The fourteenth century 4th at Westmill bears the name of its founder, William Rofforde. A bell (the 1st) at Clothall has the most curious inscription in the county, viz. :—

+ **CAITIF : ME IOANDES**

which may contain an allusion either to Saint or Founder, according as the predicate in the legend is translated, as will be mentioned later on.

Two bells—Wyddial 3rd and Eastwick treble—bear stamps of devices only. Three—Clothall 2nd, Norton 3rd, and the single bell at Newnham—have devices and letters, the latter in apparently meaningless combination.

The earliest-dated bell in the county is the 5th at Braughing above mentioned, of the year 1562 ; indeed, it seems to be the earliest-dated Elizabethan bell yet found, with one exception.

The largest bells are the tenors at St. Albans Cathedral, at Baldock, Hitchin, Sawbridgeworth, and Tring.

The most interesting—according to Mr. North—is the bell in the Clock Tower at St. Albans. I am not sure, however, that the palm in this respect is not to be given to the treble at Clothall, just named, from the singularly puzzling character of its inscription.

With regard to the sources from which the Hertfordshire bells come, they are several. London, as might be expected, has supplied the majority, but by no means an insignificant number have been produced in the county itself. Reading and Bury St. Edmunds in pre-Reformation times, Colchester, Cambridge, Drayton Parslow (Bucks), St. Neots, Wootton, and Loughborough since then, have each contributed its quota, and a very fair proportion are the handiwork of itinerant

founders. It will now be our task to give a detailed description of the most interesting bells in the county, treating them, as far as is practicable, from a chronological point of view.

Dealing, then, first with the pre-Reformation bells, which may be divided into two classes—first, those inscribed in Lombardic lettering, all of which may safely be reckoned as earlier in date than the year 1400, and secondly, those having their inscriptions in black letter—we shall pass thence to the Elizabethan bells, and so complete the account of the “ancients” now existing in the county. The seventeenth-century bells—of which, as already stated, there still remain 188—will next be reviewed, and then—more briefly, as less interesting—the 449 bells of the last and present centuries.

The “Lombardic” bells are nine in number, and while it is impossible to place these in due sequence of date, it is still possible, with some of them, to hazard a shrewd guess as to the time of their founding.

First among these we would call attention to the 2nd at Little Berkhamstead, the inscription on which has been given above (p. 5). The initial Cross on this is Fig. 1,

FIG. 1.

which has not as yet been found elsewhere. The lettering is well formed, but roughly stamped, about $\frac{3}{4}$ in. high, and it occupies the whole length of the band, there being no stops between the words. It was, so far as can be surmised at present, the invariable custom of early fourteenth-century founders to use a stop, consisting of two or three dots placed vertically between the words of the inscription, and in the later years of that century such stop developed into other and more varied

devices, as will be shown presently. Whether the entire absence of any stops on this bell denotes an earlier origin it is quite impossible to say, but it is at least possible. It remains to be remarked that, so far as regards shape, the bell is of the normal type, and that it is possible that the omission of stops is caused by the simple want of room to insert them.

A pair—the 3rd at Ardeley and the single bell at Letchworth—claim attention next: they are both inscribed, as has already been stated, to the Blessed Virgin. The lettering, small and elegant, is alike on both, and the initial cross of the same shape (Fig. 2), but not quite of the same size, the

FIG. 2.

Letchworth cross being somewhat smaller than that on the Ardeley bell. This cross and lettering are well known; and as they do not occur in either Kent, Surrey, or Sussex, nor, so far as has yet been ascertained, in Essex, they were probably the property of some founder in one of the Midland counties. The “stop” on these is the usual early fourteenth century one of three vertical dots.

The treble at Clothall is a singularly interesting bell. It bears the initial cross (Fig. 3) and the mysterious legend—

FIG. 3.

CAVE: ME IOANNES

This cross and lettering were once the property of Richard Wymbish, well known as an early fourteenth-century London bell-founder. A bell at Berechurch, Essex,

recast about eight years ago, but of which Mr. Tyssen has preserved a rubbing, had that founder's name upon it in these letters, and the same initial cross. The lettering passed later into the hands of another London founder—Robert Rider—(who died in 1386), as appears from the 3rd at Ridgewell, Essex. Whether the Clothall bell was cast by either of these is matter of doubt. So far as is at present known they both seem, as a rule, to have put their names on their bells; and if, as Dr. Raven suggests, the word **CAIT** stands for "*calefecit*," the bell may be the handiwork of some intermediate bell-founder whose name was John. This interpretation of the inscription seems to be the most likely one. The archaic Latin verb *calo*—*calare*, does not appear to have been used in medieval times, except in the past participle, *calatus*; and if it had been, one must surely credit the men of the time with sufficient knowledge of the Latin language not to have produced an utterly ungrammatical sentence. It is possible that the inverted L may be intended as a mark of abbreviation.

We have next to deal with a group of three bells—the 2nd at Hexton, the 4th at Westmill, and the 3rd at Wyddial—all of them bearing the same initial cross (Fig. 4). They are,

FIG. 4.

however, probably not the work of the same founder. About the Westmill bell there can be no mistake, as it bears the name of its maker, William Rofforde. From the evidence adduced as to him in "*Surrey Bells and London Bell Founders*," page 36, it would seem that he was a London founder of about the middle of the fourteenth century, and

the lettering used by him is engraved on Plate X. of that work.*

The Hexton bell bears the inscription—

+ AVE : MARIA

in quite a different lettering, of simpler form, roughly impressed, and so apparently earlier in date.

The bell at Wyddial has no lettering, but a series of devices only, so badly stamped in as to be almost illegible. They are six in number, and reckoning the cross (Fig. 4) as the 1st, the 3rd, 4th, and 6th are identical, each apparently formed of four *fleurs-de-lis* in a circular stamp. The 2nd and 5th are even more illegible; but a very careful examination proves them to

FIG. 5.

FIG. 6.

be the portraits of Edward III. and his queen, Philippa (Figs. 5 and 6). These “royal heads” are well known, and evidently passed through the hands of many bell-founders. They are found in Cambridgeshire, in connection with the cross (Fig. 2); while, as a proof of the

long life of some of these founder’s stamps, the head of Queen Philippa appears on a bell at Duffield, in Derbyshire, cast by Hedderley of Nottingham, as recently as 1786.

Two more “Lombardic” bells remain to be noticed, cer-

* There is apparently some connection between William Rofforde and the founder of the two bells at Letchworth and Ardeley just dealt with. Their alphabets differ in size considerably—Rofforde’s being 1½ in. high, the other ¾ in.; but the two are identical in shape and in the character of their ornamentation. One small piece of evidence tends to show that Rofforde got his letters from another man, and not in a perfect state. It is this—the S and T used by him on the Westmill bell do not belong to the same alphabet; they are much thicker and coarser than the other letters.

tainly of later date than any of those mentioned. One is the 2nd at Little Hormead, inscribed in very elegant small letters—

+ SANCTA O MARGARETA O ORA
O PRO O NOBIS

FIG. 7.

The cross is Fig. 7. It has not, I think, been engraved before. It occurs, with the same lettering, and the same wheel-like stop (Fig. 8), on some bells in Essex.

FIG. 8.

The stop also occurs on a bell at Deopham, Norfolk, with the initial cross, afterwards used by William Ffounder (Fig. 17). There is, however, no reason for attributing the Little Hormead bell to him. It was more likely the work of a predecessor, from whom the lettering came into his hands, as evidenced by its appearance on the 2nd at Bramfield.

Last, comes the 5th bell at Kimpton. It bears the inscription—

+ SIT ❁ DOMEN ❁ DOMINI ❁ BEDE-
DICTVM

FIG. 9.

The cross (Fig. 9) is well known; the stop is a *fleur-de-lis* (Fig. 9a). Bells from this foundry — the greater number of them with this same

FIG. 9a.

inscription — are found all over the South of England. There is no doubt they are of London make, and no one is more likely to have been the founder of them than William Burford, belleyetere, whose will, dated and enrolled in 1390, is printed at length in “Surrey Bells and London Bell Founders,” page 38. All the London bell-founders before him style themselves “potter” or “brazier,” indicating that bell-casting formed only a portion of their business. He is the first to call himself “belleyetere” *pur et simple*; and as from his will he was evidently a wealthy man, he must have had a large business. When one finds, then, a large number of bells all over the South of England, evidently of this date, the inference naturally follows that they must be his. There is indeed no one else to whom they can at all be referred. The bells by William Ffounder, his partial cotemporary, are readily distinguishable : crosses, stops, and lettering all alike differ.

We pass now to those black-letter bells which are of undoubted pre-Reformation times ; London, Reading, and Bury St. Edmunds being the places from which all but one have come. They number twenty-two in all ; and it is not difficult with most of them to determine their founders and their approximate date.

The first, however, to be noticed is one which it is impossible to refer to any known founder or town. It is almost certainly the work of a country bell-maker ; and, from the fact of its having, what is most unusual with black-letter bells, a stop between the words, it is probably of quite early fifteenth century date. The bell alluded to is the 3rd at Little Hadham. Its inscription—

+ Sancta + gabriel + ora pro + nobis

is very rough in character, and, as will be seen, ill-spelt and ungrammatical. The initial cross (Fig. 10) is also used for two of the stops; it does not appear to have been engraved before. The cross, which is used for the stop before "ora," is too dilapidated to be clearly made out.

The sole representative in the county from Bury St. Edmunds is a bell at Barkway, unhung, and lying on the belfry floor. It would

seem to have been formerly a sanctus or angelus bell, more probably the latter, as it bears the angelic salutation—

+ *Aue Maria Gracia Plenu*

the capital *G* and final *a* of *Plena* being upside down. It bears in addition, thrice repeated on the crown, the well-known "Bury Shield" (Fig. 11).

FIG. 11.

FIG. 10.

The name of the original possessor of this foundry mark, whose initials were H S, has not yet come to light. It is evident, however, from the Cannon and Cannon Ball on the Shield, that he cannot be placed earlier than about 1450, when cast ordnance were introduced into the country. His successor, Reignold Church, who died 1498, appears,

from the extracts from the Churchwardens' accounts of Bishop Stortford (for the publication of which antiquaries owe a heavy debt of gratitude to Mr. J. L. Glasscock, jun.), to have been doing some bell-work for that town in 1489 and 1495. Whether the Barkway bell is by him, or by the mysterious H S, is matter of doubt.

Two bells from the Reading foundries remain next to be mentioned, to leave us free to describe the eighteen whose undoubted place of origin was the Metropolis. Of the two, one is doubtful in point of date; but the other, having the founder's initials, can be fitted with fair exactitude.

FIG. 12.

FIG. 13.

The first, which is probably the earlier bell of the two, is the 3rd at Bushey. Its inscription, precatory to the Blessed Trinity, has already been given at page 5. It bears in addition the Crowned Cross (Fig. 12), the Lion's Head Stamp (Fig. 13), and the "R L" Shield (Fig. 14).

FIG. 14.

Mr. Tyssen, in his "Church Bells of Sussex," has given ample details—all in fact accessible—of the foundries existing at Reading, both in pre- and post-Reformation times. He shows conclusively that at least two bell-foundries existed there side by side for many generations; but the original owner of the R L Shield is still unknown, and no bell-founder with a name thus initialled can be traced at Reading. It is, however, more than probable, from this stamp being occasionally found in combination with one bearing the arms of the See of Winchester, that it was originally the property of some Winchester founder, and that it passed by sale after death and consequent discontinuance to one of the Reading foundries. Nothing renders the work of campanists more puzzling than the way in which these stamps passed from hand to hand, and from place to place, oftentimes far removed by distance from one another.

The lettering on this bell is bold, large, well-formed black-letter, with handsome crowned capitals. These last have

been engraved on Plate XII. of "Surrey Bells," from an old bell at Chertsey, Surrey, formerly in the abbey there.

The other Reading bell is the 4th at Kimpton, inscribed—

sanc | te | don | stane

and in addition, the medallion with the arms of the See of Winchester just mentioned (Fig. 15), and on the waist the

FIG. 15.

R L shield (Fig. 14), with the founder's initials (I S) on either side; the stop is Fig. 16. The initials are quite conclusive as to the authorship of this bell. John Saunders was casting at Reading just about the time of the Reformation—viz., 1539 to 1559—and this bell may safely be

FIG. 16.

attributed to him. Entries in the books of the Founders' Company show that for the last few years of his life he was also casting in London. In the year 1554-55 occurs the entry:

R^d for admytting John Saunders, Straynger xij^d
 „ „ Gylbert Smythe, his S^{ant} xij^d

and in the annual entries of "quarterage" payments his name occurs for the three following years. In 1557-58 he appears to have been admitted to the "Livery" of the Guild, the entrance fine of xij^s iiiij^d being duly recorded, and then his name disappears altogether; in the 1559 list only Gylbert Smythe being entered as a "Journeyman Stranger." Saunders died intestate at Reading, in the year 1558-59.

The Kimpton bell is, however, no doubt a Reading produc-

tion ; the lettering is large, coarse black-letter, without capitals. There is a bell at Goring, Oxon, inscribed to St. Blaise, in the same lettering, but guiltless of foundry stamp, cross, or initial.

We come now to the London-made bells, eighteen in number. And first among these, as earliest in date, comes the 2nd at

FIG. 17.

The bell bears in addition to his usual initial cross (Fig. 18) the inscription—

Christus Perpetue Det Nobis Gaudia Vite

The capitals are very small, altogether out of proportion with the "smalls," being in fact the same as are found on the Little Hornead 2nd, described above.

This founder has been for many years a stumbling block to campanists. His surname was at one time somewhat rashly assumed to have been Underhill ; but although that theory is now exploded, no new one has been adopted in its place.* We are not, however, without a clue as to his date. Evidence

FIG. 18.

* Since the above was written I have come across some evidence which leads me to believe him to be identical with one William Dawe Founder, whom I find as a witness to a deed dated 16 Ric. II.

which has been brought forward in "Surrey Bells" is tolerably conclusive that he was casting from 1385 to 1408; and this agrees well with the character of the inscriptions used by him—sometimes in Lombardic, sometimes in black-letter, and generally with a stop between the words—which clearly shows that he must have lived about the year 1400, when black-letter inscriptions were coming into use among bell-founders, and the use of stops was consequently coming to an end.

Connected with this last-mentioned bell, is the sole remaining one at Pelham Stocking. The initial cross is the same, and so is the lettering, but it does not bear the circular foundry stamp, and so cannot be certainly attributed to William Founder. It has the rather curious inscription—indicative of its having been recast, and of the medieval belief in the power of bells to drive away evil spirits—

Vincencius Reboat Vt Cuncta Noxia Tollat

It has also on the crown three shields, charged with a chevron between three laverpots, possibly the device of the "Guild of the Belle-makers," which is known to have existed in London during the first quarter of the fifteenth century, but about which, unfortunately, at present nothing can be found, except the bare record of its existence. It was probably a religious guild, and of brief continuance.

The 2nd at Wyddial, dedi-

FIG. 18a.

cated to St. Katherine, has the same initial cross (Fig. 9) as the 5th at Kimpton; and the capital letters are the same. If the theory which ascribes this latter bell to William Burford be tenable, we may fairly put the Wyddial bell (later in date, be it remembered, as being a "black-letter" bell) to his son, Robert Burford, who succeeded to his business, and whose date is 1392-1418. His will, dated and proved in the latter year, will be found printed at length in "Surrey Bells."

Next comes a group of seven bells, evidently allied by their all having the same initial cross (Fig. 19). These again must be subdivided into two lots, the first of which—Eastwick 2nd, Harpenden 4th, Westmill 3rd, and Widford 3rd—bear also the foundry stamp (Fig. 20).

The other three bells—viz., the 2nd and 4th at Little Munden, and the Wadesmill treble—bear the

FIG. 19.

FIG. 20.

FIG. 20a.

FIG. 21.

royal arms (Fig. 20a), adopted in the year 1413; and they bear also the well-known floral stamp (Fig. 21). On the 2nd

at Little Munden are also to be found the initials D I, which, from comparison with other similarly inscribed bells in Cambridgeshire, Bedfordshire, and Essex, we know to be meant for I D, and without doubt to be Founder's initials. The capitals on all these bells are alike, except at Harpenden, which has much larger ones than the others, and they are crowned. The legend on this bell is—

Infonat De Cælis Vox Campana Michaelis

The 4th at Little Munden has—

Sit Nomen Domini Benedictum

The Eastwick 2nd is inscribed—

Vox Augustini Senot In Aure Dei

The other four bells have dedications to various saints.

The black-letter minuscules on five of the bells of this group are alike; those on the 2nd at Little Munden and the Wadesmill treble being also alike, but smaller than those on the other five.

The question then arises, Can these seven be ascribed to any one founder? and if so, to whom? A possible answer lies in the following remarks:—In the year 1458-60, one Danyell, a founder of London, was employed in recasting some of the bells at King's College, Cambridge. One of these bells apparently remained until the ring was sacrilegiously sold in 1754. It bore the cross (Fig. 19), the royal arms (crowned), and the initials I D. This would seem very strong evidence as to the paternity of the three bells belonging to the second sub-group mentioned above. Danyell (whose Christian name we may fairly assume to have been John, the most common baptismal name of the period) evidently, after

having cast some bells for the lately founded Royal College, considered himself entitled to place the royal arms on bells cast for other churches by him. Tradesmen of the present day, as the daily papers have just shown us, are of a similar mind.

With regard to the first sub-group, it is to be noticed that the foundry mark (Fig. 20) only bears a single initial J. In those days a man was essentially known by his baptismal name; for he might have more than one surname, derived from his father, from his place of birth, or place of abode, or from his trade (*e.g.*, William Founder, whose patronymic was probably Dawe). The initial J, then, stands for the founder's Christian name; and is it not extremely probable that this foundry stamp (Fig. 20) is John Danyell's trade-mark before he took to "casting" "royal" bells, and was probably abandoned by him afterwards?*

FIG. 22.

Another bell, the 2nd at Norton, inscribed to St. Peter, has the same capital letters as have been above attributed to the two Burfords, but in this instance they are crowned. It has the initial cross (Fig. 22) and the foundry stamp (Fig. 23), with the lozenge-shaped

FIG. 23.

* Evidence which has reached me since the above was written makes rather strongly against my theory here. The capitals used on all these bells were once the property of William Founder, and I think it will turn out that Fig. 20 is the trade stamp of some intermediate bell-founder, between the said William and Danyell. I have not, however, had time to follow up the clue, and therefore leave the text unaltered.

cross above it. It has been attempted in "Surrey Bells" to show that this shield, known to campanists as the "Cross and Ring" shield, was the trade-mark of Richard Hille, founder, of London, 1420-1440, and that the shield with the lozenge-shaped stamp above was that of his widow, Johanna, who, as we know from the town records of Faversham, in Kent, continued the foundry after his death. If the theory there advanced be sound, we have here one of that notable woman's performances. Notable indeed; for after the death of her *second* husband, one Sturdy, she undauntedly went on with the business for a second time; and bells with her initials (I S) are not at all uncommon in the Home counties.

This Norton bell, now under review, is especially interesting, as having on its crown the symbols of the four Evangelists (Figs. 24 to 27).

FIG. 24.

FIG. 25.

These occur elsewhere, on bells in Cambridgeshire, Lincoln, and Suffolk; but in these instances on bells which have a different and later foundry stamp, the property of a bell-founder, whose surname was probably Kebyll or Kebell.

FIG. 26.

FIG. 27.

The next three bells to come under notice are from the foundry of Richard Hille's son-in-law, Henry Jordeyn or Jordan. He was the son of Giles Jordan, a native of Loughborough in Leicestershire, who went up to London to seek his fortune, and became there a member of the great Company of Fishmongers; but although free of that guild, he appears to have followed the trade of a founder. Henry, his son, became also by patrimony a member of the Fishmongers' Company. His bells exist in abundance, and he accumulated a goodly estate, all of which at his death, in 1468-70, he left by will to the Company of which he was a member, in trust for certain pious and charitable uses. He left an only son—named like himself Henry—who had embraced the monastic life, but who appears, from the way in which he is mentioned in a codicil to the will, to have been not quite so pious and exemplary a character as he should have been.

The three of Jordan's bells in Herts are the 1st and 2nd at Albury, and the tenor at Ardeley. The two former ones are similarly inscribed (an unusual incident)—

Hoc Signum Serva Xpi Maria Toma

On the second bell the *g* in '*Signum*' is accidentally omitted. The capitals on these are large, well-formed, plain flat letters.

The Ardeley bell has initial letters of a much more handsome type—equally large, but ornamented and crowned, the same as those which appear on Danyell's bell at Harpenden, above mentioned. The inscription on this is—

Sit Nomen Domene Benedictum

All these bells bear in addition the stamps, Figs. 28, 29, and 30.

FIG. 28.

FIG. 29.

E

FIG. 30.

Of these Fig. 28 was probably not originally Jordan's, as it is found on bells that do not bear his foundry stamp (Fig. 30), which shows clearly his connection with the Fishmongers' Company in the Dolphin and Crossed Keys, his occupation in the Bell and Laverpot; while the "garb" or wheatsheaf is part of his ancestral armorial bearings, as evidenced by coats of arms once existing on Giles Jordan's brass in Loughborough Church.

The crowned capital letters used by him on the Ardeley bell (and before him by John Danyell) passed—whether directly or not is doubtful—into the hands of a bell-founder whose initials were T B, and whom Mr. Tyssen, with the greatest probability, shows to have been one Thomas Bullisdon, who was certainly casting bells in London in 1510.

From this maker we have two bells in Herts, both bearing his foundry stamp (Fig. 31), viz.: the 6th (tenor) at Anstey, and the bell in the Clock Tower at Hoddesdon, which was formerly in the chapel of St. Katharine in that town. Of these the Anstey bell is inscribed, with Henry Jordan's capitals as above mentioned—

FIG. 31.

Sancte George Ora Pro Nobis

It bears also on the crown, alternating with two plain Maltese crosses, two shields; one with a "Rose en Soleil" (Fig. 32), and the other charged with three lions passant—the Plantagenet arms of England (Fig. 33). This last shield is not infrequently found on bells of an earlier date than this. The bell has in

addition an inscription on the waist, a practice which, apparently copied from French custom, seems to have come into fashion about this period. The inscription is as follows—

Ser Richard Pansan Ceypte

and is especially interesting as being the earliest known mention on a bell of a Deputy Vicar, or in modern speech a Curate, there being no doubt that the first letter of the last word is a D reversed.

The capital letters of this last inscription, *i.e.* that on the waist, are those formerly in the possession of John Danyell before mentioned, and they appear again on the Hoddesdon bell, which, with the usual pious precatory reference to St. Anne, bears the shield, Fig. 31, and the cross, Fig. 19.

FIG. 32.

FIG. 33.

The Clock bell in the tower at St. Albans, with the motto—

+ **Missi De Celis Habeo Nomen Gabrielis**

is probably of early sixteenth century date. The capitals and

black-letter "smalls" are very handsome and large. They have been engraved on Plate XIII. of "Surrey Bells," from an example at Limpsfield. There are a few specimens in Essex of bells with this lettering, but altogether they are rare; and the initial cross (Fig. 34) is rarer still. The only other

FIG. 34.

instance at present known is the 7th at Gloucester Cathedral, where it appears with a similar inscription to the Archangel Gabriel (with all the letters reversed) and the date 1628, it being evidently, as the Rev. H. T. Ellacombe remarks, "a reproduction of an older bell" ("Gloucester Bells," page 16). It is devoutly to be wished that our modern bell-founders would

invariably adopt this practice of reproducing the ancient inscriptions when recasting medieval bells. Messrs. Warner and Co., of London, and Gillett and Co., of Croydon, are setting a good example in this respect. May others follow in their footsteps; the process is perfectly easy.

Only one other pre-Reformation bell now remains to be noticed, the 4th at Pelham Furneaux, inscribed—

Sancta Katerina Ora Pro Nobis

It is the handywork of William Culverden, citizen and brazier, of London, whose foundry stamp (Fig. 35) it bears. This shield, when it came first to light, was a considerable crux

to campanists, and various were the guesses at its owner's name. Bird, Sparrow, and Peacock were some of the names

FIG. 35.

suggested, until Mr. Tyssen solved the problem by turning up the will of the genuine Simon Pure. The bird being a "culver" or wood-pigeon, the rebus reads easily enough.

Culverden's career was but a short one: from 1513 to 1522. Dr. Raven has printed his will at full length in the "Church Bells of Cambridgeshire" (2nd ed., page 44). His successor in business was one Thomas Lawrence, who was a member

of the Founders' Company, serving the office of under-warden of that Guild in 1530-31, and upper-warden in 1537-38. His name appears regularly on the Company's books until 1540-41, when he seems to have retired to Norwich, probably his native place. There are no bells by him in Hertfordshire, and only one or two elsewhere which appear likely to be of his make.

As with him, so with several other London bell-founders of this epoch, although their names are known, no bells by them have yet been absolutely identified. It would be only reasonable to conjecture, as to this, that bell *casting* at this date was exceedingly rare, and that these men dealt mainly in second-hand bells, looted by Government from the suppressed monasteries and sold at old-metal price to the trade. The public accounts of the time, preserved at the Record Office,

teem with accounts of bells (and lead) thus sold.* So great was the quantity of bell-metal accumulated, that more than once in Queen Elizabeth's reign proclamations were put forth by royal authority forbidding the export of it, obviously lest it should be used abroad for the manufacture of cannon, to be employed to the hurt of our sea-girt isle.

One may here draw attention to a pair of bells, no longer, unfortunately, to be counted among the "ancients" of the county, but which were in existence at Sawbridgeworth until 1870, when the ring there was augmented, and in part recast, by Taylors of Loughborough. Which numbers they were seems a little doubtful; but the inscriptions have been preserved and repeated on the present 5th and 7th. They are—

Stella Maria Socurre Piissima Nobis †
and—

In Mulfis Annis Resonet Campana Johannis

According to information which has reached Mr. North, however, this last inscription was originally—

Carmina Johannis In Mulfis Annis Resonet

which was most probably the case, the maker thereof having a great weakness for putting original mottos on his bells, and not perpetuating the old time-worn inscriptions of former founders; and this renders it probable that the other bell is also by him.

The Johannis bell bore his name, "Johannes Tonne," a well-known London founder, contemporaneous with Culverden.

* In the Accounts of the Receiver for Cardinal's College, Oxford, 16th to 19th Henry VIII., is an entry of £13 6s. 8d., received of Thomas Lawrence, bell-founder, for the price of bells sold to him at Begham.

† This inscription is generally worded "Stella Maria Maris," etc.

He was without doubt a Frenchman (? Jean Antoine), from his method of ornamenting his bells in the French fashion, with medallions and crosses, etc., on the waist. Mr. A. D. Tyssen, whose knowledge of French bell-inscriptions is greater than that of any other Englishman, is absolutely of this opinion. Accordingly there was on the bell under review a large shield of the English Royal Arms, with supporters, and the Prince of Wales's Crest above. This is found on other of his bells; *e.g.*, on all three at Aythorp Roding, in Essex. It also occurs on a bell at Downe, in Kent, with the date 1511, but no founder's name, and with cross and stops which as yet have not been found on any of John Tonne's bells, and were possibly the property of a predecessor.

Whether there was anything on the waist of the Mary bell at Sawbridgeworth is unknown. If, as seems likely, it was also one of Tonne's making, it is most probable that there was either the Royal Arms or his large handsome cross, figured in the "Church Bells of Sussex."

We have now to consider the bells of the early post-Reformation period, from 1560 to 1600; and as at this time it commenced to be the usual thing for founders to place their names upon the bells they cast, as a rule it is easy to deal with them. There are, however, a fair number where a certain amount of hypothesis has to be sustained, and Hertfordshire is fairly represented as to bells in this category.

The first bell to notice is one which comes under the latter of these heads. It is the 5th at Braughing, notable as being, with one exception, the earliest dated Elizabethan bell in existence. The inscription upon it is in black letter without any capitals, and is meant for—

deus in adiutorium meum intende

It has also upon the crown the date 1562, and yet again, above the date, so close under the headstock that a rubbing was only obtained with much difficulty, the initials **ic**, without doubt those of the founder, who would seem to have been a Hertfordshire man. Among the Land Revenue papers preserved at the Record Office is a certificate, dated 1557, of the weight of some bells from the Priory of Wymondley. It is of sufficient interest to be given *in extenso*.

“The stificat of the weyght of the iiij bell℥ of Graueley sum tyme
“be longnyg to the Priore of Wymūdelay pua mad by Edward
“Brokett & Edward Pulter y^e xxvj day of Maii a^o dni m^lvclvij.

“p me Edward Brokett

“p me Edward Pulter

Thesthewurth, the dwelling-place of this bell “funder,” is readily identifiable with Datchworth, near Welwyn, formerly spelled, and still locally pronounced, Thatchworth.

It seems not unlikely that this Braughing bell was by this man, especially as we have at Eastwick a bell dated 1601, which will be duly mentioned, by one John Clarke, proved by other productions in this quarter—notably in Cambridgeshire, Essex, and Bedfordshire—to have been a local bell-founder, and not at all improbably a son or grandson of the above-named individual.

By the kindness of the Rev. J. Wardale, I have been permitted to examine thoroughly the Parish Registers of Datchworth. They commence only in 1570, and so, unfortunately, throw no light upon the Marian founder. I find, however, that in 1572 to 1585 there was a John Clarke living in the parish, the baptisms of seven of his children and the deaths of two, being recorded—one son, the eldest, also a John, being baptized on the 8th May, 1575. Joane Clarke, the wife, was buried in May, 1584; the only later entry being the marriage of one of the daughters. This points to a general migration of the family. Whether John Clarke the father, of these entries, was the founder of the Braughing bell is doubtful. He would appear more likely to have been his son, so far as dates are concerned; but the name is so common a one that it is extremely hazardous to found any theory without further confirmatory evidence, which at present is not forthcoming.

At Harpenden are two bells, the first and 3rd, dated respectively 1574 and 1571, the manufacture of one John Grene, also without doubt a local founder, but one as yet unidentified as to his place of abode. The treble bears his name; the other bell perpetuates a pre-Reformation inscription, somewhat ungrammatically rendered—

*In Nullis Annis Resonat Campana Johanes**

Another local founder, John Dier by name, supplied no less than eleven bells, still existing. They range in date from 1580 to 1597, and are—the 4th at Ardeley, the 3rd at Graveley, the 3rd and 4th at Much Hadham, the 2nd at Little Hadham,

* There must have been more than one John Greene. In the churchwardens' accounts of Stratford-on-Avon, under date 26th July, 1627, John Greene, bell-founder, was presented by the minister and churchwardens "for working on Sabbath-day, July 13, in y^e time of 'divine service,'" and probably fined.

the 3rd at Offley, the 4th at Therfield and Wadesmill, the 3rd at Great Wymondley, and the 2nd at Little Wymondley. All these bear his name, and the year in which they were cast. To them may be added the 5th at Hemel Hempstead, dateless and nameless, but identifiable as his by the lettering and stop. It is inscribed—

lawd ate § do mini

John Dier's place of abode has not yet been found out; but from the fact of no less than five out of the above eleven bells being dated in the same year, 1595, it may reasonably be surmised that he was an itinerant founder. There are bells by him in Cambridgeshire, Essex, and Bedfordshire. He spells his name indifferently, **Dier** or **Dyer**, and in one instance **Dyey**.

Among the "doubtful" bells of this period is the treble at Lilley, which only has upon it—

ANNO DM 1580

and is difficult to place. The lettering, however, has much resemblance to that used later by the Knights, of Reading, and if it were reckoned to be the work of William Knight, the guess would probably not be a bad one. John Brend, of Norwich, had a weakness for this inscription, but I think the localities are too far apart for it to be his.

The single remaining bell at Flaunden, with the date 1578, and the motto, with a plain Maltese cross at the beginning—

Gloria in excelsis deo

is certainly by William Knight, for it bears his initials **w k**. The lettering is badly formed black-letter, different from that used by him elsewhere; but the cross and initials are conclu-

sive. A bell, formerly at this church, and now at St. John's, Uxbridge, is inscribed—

+ *sancta iohani ora pro nobis* WK 1578

a very late instance of a distinctly pre-Reformation invocation. In an abbey town like Reading, however, Catholic sayings and practices would certainly die hard.

There are four more bells in the county which may, from their lettering, be fairly referred to this period. Three of these are evidently the work of one man, and so form a group by themselves. The other is unique : it is the treble at Eastwick. It has neither name nor what may be correctly called an inscription ; all that is to be found thereon is a series of ten stamps, very few of which are intelligible. Six of these are evidently black-letter smalls, of which the first, a **D**, can alone be made out. Next comes what seems to be meant for a wheatsheaf, or a bundle of something tied round the middle ; then two letters, apparently **of**, thus placed ; then the only stamp which is clear and unmistakable—a crowned rose ; the tenth and final stamp being quite unrecognisable.

The crowned rose—a Tudor emblem—is found on bells in Kent and Essex of this date. The size, however, of the stamp is different, and there is no founder as yet known to whom this bell can be ascribed. Whether the letters S F are the maker's initials is quite matter of doubt ; at any rate, if they are, they are at present unidentifiable.

The group of three bells, alluded to above, are the 2nd at Clothall, the 3rd at Norton, and the single bell at Newnham. It will be noticed that all these three places are within a very short distance of Baldock, which points to their being the work of some one whose abode, permanent or temporary, was

in that town. There is nothing on the bells to give a clue to his name. The inscriptions are : on the Clothall bell—

+ ihs  T M  2

While the Newnham bell has—

+ N N I T N D O Y  I ihs

and the Norton bell—

+ H    ihs  E A D

The cross and crown are given as Figs. 36 and 37. It will

FIG. 36.

FIG. 37.

be seen that, so far as regards the lettering, there is no sense to be made of the inscriptions. Had the L W been repeated on the two last bells, one would have been tempted to ascribe them to Lawrence Wright, bell-founder, of London, who was employed in 1587 to recast a bell at St. Michael's Church, Cornhill; but as it is, it would seem more probable that they were the work of an itinerant.

We pass now from the sixteenth to the seventeenth century; and the first bell to notice is one which in strictness belongs to the group of Elizabethan bells, its date being 1601. It is the 3rd at Eastwick, and the inscription is very indistinct,

and needed the very careful examination of a practised eye to determine it. It proves to be—

John Clarke Made This Bell

This maker's bells are found also in the counties of Sussex, Kent, Essex, Bedfordshire, and Cambridgeshire. This would seem to point him out as a London founder, itinerating largely, probably the John Clarke who was baptized at Datchworth in 1575, and son or grandson of the Clarke who certified the weight of some bells in Herts, as before detailed.

In dealing with the other bells of the seventeenth century—of which, it will be recollected, there are no less than 188—it will be most convenient to take first three foundries, the productions of which comprise about two-thirds of the whole number. The three are those belonging to Robert Oldfeild; the Chandler family, of Drayton Parslow (Bucks); and the celebrated Colchester founders, Miles Graye, father and son of the same name; and of these Robert Oldfeild, who has some claim to be regarded as a Hertfordshire founder, shall have the first notice. His dates range from 1605 to 1638. In the "Church Bells of Bedfordshire," Mr. North states that he "was doubtless connected with the Nottingham founders of that name." The connection, however, has not been absolutely made out; and it is noteworthy that, according to the records of the Founders' Company, there were about this period two men of this surname on their books—Rowland and Hugh. There had been also, about the time of the Reformation, a bell-founder at Canterbury, of the name of William Oldfield.

As with his descent, so with his place of abode: it is as yet matter of doubt. He was certainly living at Hertford in 1638. This we know from the churchwardens' accounts

of Shillington, Beds, for which place he cast in that year the treble, still hanging in the church ; but whether he was simply there on a journey, or had been permanently located there, is not known. Researches at Somerset House have failed to produce his will ; and local researches among the Hertford parish registers show no trace of him.

FIG. 38.

There are forty-six bells by him still in Hertfordshire, and two more are known of, which have been recast. He uses ordinary Roman type for his lettering ; and his bells, with four exceptions, bear his foundry stamp (Fig. 38). He makes use also, almost invariably, of an initial cross, one or other of the three here figured (Nos. 39, 40, and 41).

FIG. 39.

FIG. 40.

FIG. 41

The 3rd at Stanstead Abbots, dated 1605, is probably his earliest production. This bears his name in full as the maker

(but no foundry shield), and a *fleur-de-lis* stop between the words, which is not found on any other of his bells. Three of them, however—the treble at Broxbourne, the 7th at Hemel Hempstead, and the 7th at Tring—have a stop of floral device. His favourite inscription is—

PRAISE THE LORD

no less than nineteen bells bearing it in several varieties of spelling. They are :—Albury treble, Great Amwell 2nd, Ardeley 5th, Bengoe 2nd (recast), Broxbourne 4th, Caldecote single, Digswell 2nd, Little Hadham 4th, Harpenden 2nd and 5th, Hemel Hempstead 4th, Great Munden 3rd, Pirton 5th, Saint Ippolyts treble, Shenley 3rd, Tring 6th, Wadesmill 3rd, Widford 4th, and Great Wymondley treble.

GOD SAVE THE (or OVR) KING

appears on eleven bells : Anstey 5th, Broxbourne 2nd, Digswell 3rd, Hunsdon 2nd, Great Munden 4th, Reed 3rd, Saint Ippolyts 3rd, Stanstead Abbots 2nd, Thorley 3rd, Tring 5th, and Widford 2nd.

Seven—viz., the trebles at Broxbourne, Graveley, Hunsdon, and Offley, the 3rd at Gilston, and the 2nd at Great Munden and Wadesmill—bear the pious ejaculation—

IESVS BE OVR SPEDE

Four—Little Berkhamstead 3rd, and three bells at Kimpton (the 1st, 3rd, and 6th)—bear the names of donors or churchwardens.

GOD SAVE HIS CHVRCH

appears on one bell only—the 3rd at Albury.

Of Latin inscriptions used by him there are two. The first—

SONORO SONO MEO SONO DEO

occurs on three—the 4th at Anstey, the 5th at Great Munden, and the 7th at Tring. The other more elaborate one—

SANA MANET CHRISTI PLEBISQVE RELIGIO VANA

is found on one bell only—the 7th at Hemel Hempstead. It was also formerly on the 6th at Great Munden, since recast.

As regards dates, his bells are spread fairly evenly over his epoch, 1605 to 1638; and, allowing for the many that must have been recast since his day, we may conclude that he had a steady and profitable business. No doubt he, in common with all the country bell-founders of his time, did a good deal of itinerant work—setting up his furnaces and casting bells where needed on the spot; but, from the fact of there being far more of his bells in this county than in any other, he may fairly be claimed as a Hertfordshire founder, and it is only to be hoped that researches among parish and other archives will confirm this, and bring to light his place of abode, whether Hertford (as seems most likely) or elsewhere.

We now come to a group of forty bells, cast by one or other members of the family of Graye, of Colchester, and ranging in date from 1615 to 1666. The first bell-founder at Colchester is stated to have been Richard Bowler, whose dates run from 1583 to 1620; and Miles Graye the elder is believed to have learned his craft from him. This seems probable enough; but as their dates overlap for twenty years (Graye's earliest being 1601), the connection was probably severed early; Miles—later to be known as “Colchester Graye”—starting casting

on his own account soon after finishing his apprenticeship. He soon showed that he had not learned his lesson badly, that he was emphatically master of his craft, and for the best part of half a century he held the pride of place all over the Eastern Counties. So far-spread was his reputation that the tenor bell of the church of St. Nicholas, Newcastle-on-Tyne, was sent all the way to Colchester to be recast by him.

He died in 1649, advanced in years, his end not improbably hastened by the privations which he, in common with his fellow-townsmen, had borne during the memorable siege of 1648.

There are five-and-twenty bells in Hertfordshire which bear his name, inscribed in square, sturdy, well-formed Roman type, most generally large-sized, though a smaller alphabet is also occasionally found. They are : the 2nd, 3rd, and 5th at Aston, the 5th at Bennington, the 6th and tenor at Braughing, treble and 2nd at Cheshunt, the three largest of the ring at Great Hormead, the 2nd, 4th, and tenor at Kelshall. These last three are of the year 1642—his *latest* date in Hertfordshire, as the Braughing 6th (1615) is his earliest. Further, we have the treble at Little Munden, treble, 2nd, and 4th at Pelham Brent, 5th at Pelham Furneaux, the tenor at Sandon, Nos. 2 and 4 at Standon, No. 2 at Therfield, the 5th at Westmill, and the 3rd at Weston. Of these, the 4th at Great Hormead, dated 1626, bears also the name of William Harbert, who was, in and about the years 1626 to 1628, foreman or temporary partner with Miles Graye. The 4th at Braughing, dated in the last-named year, bears William Harbert's name alone, but in Graye's letters.

Old "Colchester" Graye's will is dated 17th May, 1649, and was proved on the 23rd June of the same year. With

the exception of some small bequests to his sons, Miles and James, and his daughters, Ann Darbye and Mary Starlinge, he leaves everything, including trade implements, to his wife, Dorothy. How long she survived him is unknown; but his son, Miles Graye the younger, was casting bells in the following year, and putting his own name on them, which looks as if the business had then entirely passed to him.

There are only eight bells by Miles Graye the younger in Hertfordshire, and six of these are dated 1650 and 1651. They are Baldock 5th, Cottered 4th and 5th, Hinxworth 2nd and 3rd, and the 4th at Ickleford. These places all lie pretty handy to one another, and it would seem very likely that they were cast on a flying visit to Hertfordshire. The other two are the 7th at Braughing, dated 1653, and the 3rd at Therfield, dated 1656. There were probably many more of his once hanging (but which have been recast during the last and present centuries), for his work was not finished for another thirty years. He died in 1686, his will being dated on the 9th June of that year, and proved within a few days afterwards by his widow, Elizabeth, his executrix, and, with the exception of small pecuniary legacies to his children, his universal devisee.

Six bells in the county: the 1st and 2nd at Buckland, the Measden treble, 2nd and 3rd at Willian, and the 4th at Wyddial, are by one Christopher Graye, who was probably a member of this family, although the actual connection has not yet come to light. He was eminently peripatetic, setting up his furnaces, as Dr. Raven has found out, at one time as far off as Staffordshire; at another at Amptill in Beds; finally, it would seem, settling down at Haddenham. His work is far inferior to that of his two namesakes.

The group of seventeenth-century bells from the foundry of the Chandler family at Drayton Parslow in Buckinghamshire yet remains to be noticed; but as it really stretches into the next century it will be more convenient to leave it for the present and deal with the few other remaining bells of Caroline times whose makers are known.

Of these the first to be noticed is one of the latest in point of date—the 2nd at Ashwell, dated 1694, by Charles Newman, the successor of Christopher Graye, and like him very much itinerant. All that is known about him is detailed very fully in Dr. Raven's "Church Bells of Cambridgeshire."

Two bells, the 1st and 2nd at Bushey, are from the well-known foundry of the Eldridges, at Chertsey, in Surrey. They are by William Eldridge the elder, and dated 1664. There is a full account of this foundry, which existed for nearly a century, in "Surrey Bells and London Bell Founders."

Bells from the London foundries come next to be mentioned. Of these, during the seventeenth century, there are several—twelve from the well-known Whitechapel foundry, and just half that number from the rival establishment of the Hodsons.

Early City records prove conclusively that in the thirteenth, fourteenth, and fifteenth centuries the bell-founding trade was confined exclusively to the extreme east of the City—Aldgate Ward inside the walls, and Portsoken outside them. At what date it spread to the country parish of St. Mary Matfellow is unknown; but in or about 1570 we find Robert Mot located there. Who he was, and where he learned his trade, is uncertain. The name, however, is a Kentish one, and indications are not wanting that he was a native of Canterbury, and the son of one John Mott, who, at the time of the Reformation, did a good stroke of business in that city, buying up bell-

metal, organ-pipes, old latten, etc., etc., the plunder of the monasteries and churches. If this be the case, Robert Mot may not improbably have "served his time" to, and learned his trade from, William Oldfield, of Canterbury, bell-founder, who was casting before and during the Reformation period, some of whose bells are still hanging in Kentish churches.

Robert Mot, from the large number of his bells still existing, must have had an extensive business. There were other bell-founders in London at the period, but the Whitechapel foundry evidently had the pre-eminence. There are none of his bells now in Hertfordshire, but two were there until recently—they were at Elstree—and were handed over to Messrs. Warner and Sons in 1879 in part payment for the new ring cast by them for that church. Their date was 1589.

In 1606, Mot sold the business to Joseph Carter, of Reading, who sent his son William to London to manage it. The 3rd bell at Ridge is by this William, bearing the date 1613 and the maker's name in large handsome Lombardic letters. The stamps for these letters—evidently part of the trade plant handed over by Mot, for they were used by him, although very rarely—were originally the property of the Braziers, of Norwich, bell-founders in the fourteenth and fifteenth centuries. They have been so often engraved that their reproduction here is deemed superfluous. William Carter is the last who used them, as they were probably worn out, and his successors, the Bartletts, three generations of whom carried on the foundry, use plain Roman capitals exclusively.

The three of these Bartletts—Thomas, Anthony, and James—spread over the remainder of the century from William Carter's death in or about 1619.

Thomas has four examples in the county—they are the

2nd at Shenley, and the 5th at Offley, which both bear—

GOD BE MY GOOD SPEED

(the spelling on the Shenley bell being somewhat more archaic), and the 2nd and 4th at Offley, which have only the churchwardens' and founder's names. These bells bear dates from 1616 to 1619, and as the foundry, according to Mr. Tyssen, did not come into Thomas Bartlett's hands until this last mentioned year, it would seem probable that these four bells were moulded by him while he was still foreman to William Carter.

Anthony Bartlett succeeded his father Thomas in 1647. Three only of his bells now hang in the county : the 4th and tenor at Hunsdon and the 2nd at Gilston. Anthony died in 1676, and was succeeded by his son, James Bartlett, who carried it on for almost exactly the remainder of the century, dying in January, 1701. The 2nd at Ardeley, 4th at Cheshunt, 3rd at Sacomb, and the priest's bell at Barkway are by him.

The rival foundry in London during the middle of this century was that of the Hodsons—John and Christopher. Its site has not been ascertained. They, like their rivals, had a large business, their connection apparently lying in the south and east ; Kent especially has many of their bells still hanging in its steeples.

There are none of Christopher's works in Herts, but of John's we have the following examples : the 5th at Broxbourne, the 2nd at Much Hadham, two at Hertingfordbury—the 4th, inscribed—

O PRAISE THE LORD FOR HIS GOODNES AND DECLARE
HIS W 1656

and the 5th, or tenor, which has, with the same date—

ICEPE DVLCE SEQVAR W. WHITMORE FOR IOHN HVDSON

Whitmore's name or initials appear on bells in other counties, he being evidently at the time John Hodson's foreman. His initials, without, however, any mention of Hodson's name, appear on the 2nd at Bovingdon, dated 1654, which we may also fairly ascribe to this foundry. Then comes the 3rd at Pelham Furneaux, dated 1662, with the initials of a fresh foreman, W H, standing for William Hull, who served more than one founder in this capacity. A full, true, and particular account of him will be found in Mr. Tyssen's "Church Bells of Sussex."

To John Hodson also may fairly be ascribed the 3rd at King's Langley. It bears no founder's name, but the date (1657) and the lettering are strong evidence in favour of this—not, however, absolutely conclusive, as the lettering used by all founders at this date is very similar.

William and Philip Wightman were also London founders of the latter half of the seventeenth century, and appear to have been successors of the Hodsons, although the connection has not been quite made out. At Thorley the 1st and 2nd are by William Wightman, dated 1682; the treble at Therfield bears the names of both, and the date 1689; while the 5th at Little Hadham, dated 1693, has Philip's name alone. At St. Albans Cathedral, too, there are four bells by this last, all dated in the same year, 1699. The closeness of the dates on these two men's bells points to the two being brothers rather than father and son.

From the Reading foundry, belonging to various successive members of the Knight family all through this century, we have three bells in Hertfordshire. Their sixteenth-century bells have already been noticed on page 34. Henry Knight cast the 2nd at Sarratt in 1606; it bears his name, and the Maltese Cross used by his predecessors.

The 3rd at Tring, with the curious legend—

ON PART OF THIS BELL WAS GIVEEN BY MANI MEN

bears the date 1636, which, with the somewhat peculiar shaped letters, clearly indicates it to be the work of Ellis Knight, whose dates are 1623 to 1642. The oddly shaped I which he used has drawn Mr. Cussans into a strange error. In his history of Herts he gives the last two words of the inscription "MANX MEN."

The last of this family who cast bells at Reading was Samuel Knight. He migrated to London in the early years of the eighteenth century, and the bells cast by him there will be duly noticed later on. The only specimen of his seventeenth-century work at Reading is the 4th at Knebworth, with the date 1697. It does not bear his name, but the lettering is that used by him.

Four bells (Nos. 1 to 4) at Layston, dated 1633, bearing the names of vicar and churchwardens, are rather difficult to place. The lettering is certainly not that used by any bell-founder yet mentioned, and it is not improbable they were the work of John Clifton, a London founder, who would seem to have learned his trade at the Whitechapel foundry. I know of no one else to whom to ascribe them—the lettering, so far as I know, is unique.

We now come to the bells from the foundry of the Chandlers at Drayton Parslow, Bucks, completing the seventeenth century and linking it with the eighteenth. They are fifty-six in number, and range in date from 1651 to 1723.

The foundry at Drayton Parslow stood on ground at the back of the "Three Horse Shoes" inn, now used as a garden and paddock. Founder's *débris* have been dug up on the site.

The first of the family to cast there was Richard Chandler, the son of Anthonie Chandler, blacksmith. Richard was born in 1602, married in 1622, and died in 1638. Where he learned the craft is unknown, but it was probably at Leicester, nor is it as yet clear in what year he began bell-founding; we must wait for that information until the bells of his native county are taken in hand by some one competent to the task. His earliest (and only) specimen in Bedfordshire is dated only two years before his death. There are none of his bells in Hertfordshire.

After his death, his only son Anthony, born in 1622, carried on the business, probably during his nonage with the assistance of a foreman, if indeed any bells at all were cast during this period, which at present seems doubtful. His earliest date in Hertfordshire is 1651; but as it is found on four bells out of a ring of five—probably at the time the entire peal—it is in the highest degree likely that he had been founding for some years previously. The bells referred to are the 1st, 2nd, 3rd, and 4th at Berkhamstead Northchurch. Others by him are the 2nd at Aldbury, and 3rd at Puttenham, dated 1655 and 1656 respectively. The Restoration seems to have brought him, as indeed might well be expected, a tolerable influx of business. In 1662 he cast four bells for Great Gaddesden, and one for Bovingdon in the following year; in 1664 no less than five out of the peal of six at Flamstead; and in 1665 the 1st, 2nd, 3rd, and 5th at St. Paul's Walden. All these bells are inscribed "Chandler made me." His later examples—for instance, the 3rd, 4th, 5th, and 6th at Datchworth, and the 4th at Tewin—have his name in full; the 2nd, 3rd, and 5th at the last-named church bearing initials "A C" only. These last eight bells are all dated in 1673. The date of his death

is a little doubtful, but it was most probably in January, 1681. He was succeeded in the business by his two elder sons, Richard (born 1650) and George (born 1654). Richard indeed appears to have been moulding before his father's death, as we have his name on the 3rd bell at Ickleford, with the date 1680. The other bells by him are: the 3rd, 5th, and 6th at Essendon (1681), the tenor at Weston (1682), the 3rd at Aldbury (1683), and the 2nd and 4th at Essendon (1685). George Chandler's bells are the 4th, 5th, 6th, 7th, and 8th at Aspenden, dated 1681 (the 7th has since been recast); the 2nd and 3rd at Wotton (1682); Aldenham tenor, dated 1683; and 2nd at Lilley, dated 1704. Bells "by the firm," inscribed "Chandler made me," are the 3rd at Hemel Hempstead and the 3rd at Hexton (both dated 1688), the tenor at Tring (1695), and the treble at Hexton (1697).

Richard died on one of the last days of the year 1704; his brother George surviving until 1725. The only bell, however, in Herts bearing George's name in this latter period is the tenor at Kensworth, dated 1717. All the other bells from the foundry bear "Chandler" alone. They are: the 1st, 2nd, 3rd, and 4th at the last-named church—Kensworth, the treble at Puttenham, 3rd at Sarratt, and the 5th at Great Gaddesden. This seems to indicate the presence in the business of another Richard Chandler, whose name occurs, with the date 1723, on a bell at Hulcote, in Bedfordshire. Whose son he was is not known; nor do we know precisely the date when the foundry passed, as it certainly did, into the hands of Edward Hall. There are only two bells by this last-named founder in Herts—the 2nd and 3rd at Knebworth, dated 1730 and 1732 respectively. He was apparently unsuccessful, his business being doubtless killed by the competi-

tion of the great London foundries. He died in 1755, and is described in the parish registers as "a poor bell-founder."

We are now fairly entered upon the eighteenth century, the bells of which, as of less antiquarian interest, may be more briefly dismissed, those which we owe to the celebrated Hertfordshire bell-founder, John Briant, always excepted. We will leave his productions till last.

At the close of the seventeenth century, the Whitechapel foundry was in the hands of James Bartlett, and on his death in 1701 it passed, probably by purchase, to Richard Phelps, under whose skilful management it soon obtained the high reputation which it has ever since borne. The mania for change ringing, which seems to have reached its zenith about this time, inducing so many parsons and churchwardens to convert their peals of three or four heavy bells into lighter rings of five or six or even eight, must have conduced largely to the profit of Richard Phelps and his contemporaries in the craft.

Hertfordshire is not so well represented, as regards Phelps, as the other home counties; it has only twenty-three as against sixty-seven in Surrey. No doubt, however, many by him formerly existed, but have been since recast. The twenty-three include only one entire peal, that of six at Wheathampstead. Five at Abbots Langley (Nos. 1 to 5); four at St. Peter's church, St. Albans; three each at Aspenden and Ware, and odd bells at King's Langley and Shenley, complete his specimens. His dates, so far as Herts is concerned, range from 1717 to 1736; he was, however, founding from 1700 to 1738.

He was succeeded after his death, in the last-named year, by his foreman, Thomas Lester, who during his career in sole

occupation of the foundry, 1738 to 1752, sent sixteen bells into the county, including two whole rings, one of eight at Watford, and one of six at Royston (one bell in each has, however, been since recast), the 2nd at Hertingfordbury, and the 3rd at Sawbridgeworth.

In 1752, Lester took into partnership Thomas Pack, who had probably been his foreman, and the firm became "Lester and Pack." Specimens of their work are fairly abundant in Herts: the entire peal at Rickmansworth, eight in number, is theirs; three bells, including the tenor, at Hemel Hempstead; and eleven other examples at other places make up their tale. Dates range from 1752 to 1767.

In 1769, William Chapman, Lester's nephew, was added to the firm, which then became, for a short period, "Lester, Pack, and Chapman." None of their bells, however, reached Hertfordshire, and Lester dying in December of that year, the firm became "Pack and Chapman" only. At Essendon, however, the treble bell, cast in 1769, bears the name of Thomas Pack only, and is, so far as is known, unique in that respect. Pack and Chapman's examples are fifteen in number, and include the then entire peal of eight at All Saints, Hertford, two trebles having since been added to the ring. The remaining seven bells are at various churches in the county.

Pack died in 1781, and William Mears became a partner a few years later, and the business eventually passed entirely into the hands of him and his descendants. As, however, there are no bells in the county by any of them until the nineteenth century came in, we will pass now to the consideration of the other eighteenth-century founders.

Samuel Knight, of Reading, has already been mentioned, and his transfer of his business to the Metropolis. His Hert-

fordshire business was not extensive, only eight bells bearing his name; but, as will be seen presently, there is reason to suppose him to have been interested, if not personally concerned, in the moulding and recasting of some other examples in the county. The eight include the five smaller bells of the ring of six at St. Michael's Church, St. Albans (the tenor, which was probably also by him, was recast in 1845); they are dated 1739. The 5th proclaims the fact that "Robert Catlin hung us all." The treble and 5th at Much Hadham, dated 1738, and the treble at Redbourne, are Knight's other examples.

This last-mentioned bell is somewhat of a curiosity. It bears the inscription "PRAYSE THE LORD" (unusual at this date, and probably reproduced from the bell it replaced) "1716 H. KNIGHT." The 2nd and 3rd of the ring are inscribed—in the same lettering, and with the same *fleurs-de-lis* as ornaments—"JOHN WAYLETT MADE ME." This clearly indicates, what was not uncommon about this time, viz., a temporary partnership, or rather, association in business. It is rather curious, however, that Waylett should be apparently so ignorant of Knight's Christian name as to put H instead of S for his initial.

As John Waylett comes to the fore here, perhaps it will be most convenient to deal with him altogether before mentioning Knight's successor. He was eminently peripatetic, travelling, it would seem, at times for other founders of established reputation. Thus, at Great Thurlow, Suffolk, is a bell inscribed with his name and that of John Thornton, of Sudbury, and the date 1712. His temporary connection with S. Knight is evidenced by bells in Kent, as well as those at Redbourne in this county. In connection with this last, it is noteworthy

that the trebles at Knebworth and Weston, and the tenor at Great Wymondley, all bear the same date, 1716, and were probably cast by him for Samuel Knight's account. His Herts connection seems to have been tolerably good. Altogether there are twenty-six bells bearing his name, ranging in date from 1706, on the treble at Hertingfordbury, to 1730, on the tenor at Bishop Stortford. They are mostly "odd" bells, testifying to itinerant casting, but there are exceptions; for instance, Nos. 4, 5, and 6 at Bishop Stortford (1713), 5 and 6 at Cheshunt (1712), and 3, 4, and 5 at Walkern. Sandon has four of his moulding; but one has no date, and the other three are all of different dates. His place of abode is not known, but it would seem most likely to have been London.

Knight's successor in the foundry (which, by the way, was situated somewhere in the parish of St. Andrew, Holborn) was the Robert Catlin before mentioned as a bell-hanger. This was in 1739. Hertfordshire possesses only six bells cast by him—the 1st, 2nd, and 3rd at Braughing, the treble at Kelsall, and the bell in the Clock Tower at Layston.

Catlin died in 1751, and was succeeded by Thomas Swain, whose works, however, are not to be found at the present day in Hertfordshire.

Samuel Newton, about whom nothing is known at present, but who was probably a Londoner, cast the 2nd bell at Totteridge in 1707. The only other bell by him, noticed as yet, is the 3rd at Kingsbury, Middlesex, dated 1708.

Thomas Newman, seemingly the son of Charles Newman, who has been already mentioned, was an itinerant founder, with his head-quarters at Norwich (See "Norfolk Bells," pages 40 to 42). Dr. Raven claims him as a Cambridgeshire founder, and he certainly was casting at Cambridge in 1723,

but he had evidently only set up his furnaces there temporarily. His sole Hertfordshire example, the 2nd at Pelham Furneaux, from its date, 1723, was probably cast at Cambridge.

Thomas Russell, of Wootton, Beds, supplied two bells to the county—the tenor at Ickleford, dated 1726, and the 4th at Pirton, dated 1731. An account of this—the only bell-foundry in the county of Bedfordshire of any permanence—will be found in Mr. North's book, "The Church Bells of Bedfordshire," pages 36 to 39. It is hardly of sufficient consequence to be reproduced here.

The St. Neots Foundry, however—a much more important one—is entitled to a more extensive notice. It was an offshoot from a foundry established at Kettering, Northants, in or about 1717, by Thomas and John Eayre, and carried on with varying success until 1761, when it was finally closed. Joseph Eayre, the brother of the above-named Thomas, opened his foundry at St. Neots, somewhere about 1735. His Hertfordshire bells are fourteen in number. They include seven bells out of the ring of eight at Hitchin parish church, Nos. 2 and 3 at Pirton, the treble at Willian, the 2nd at Great Wymondley, the treble at Little Wymondley, and the only large bell which, as before related, the parishioners of Welwyn have allowed to remain in their church. These last two bells bear a curious inscription, apparently recording Mr. Joseph Eayre's solemn protest against Methodism and all the other isms which about that time were stirring the somewhat dry bones of the Church of England. The Welwyn bell has—

"PROSPERITY TO THE ESTABLISHED CHURCH OF ENGLAND—No
ENCOURAGEMENT TO ENTUSIASM"

The inscription at Little Wymondley is to the same effect—

the word 'established' being omitted, and 'enthusiasm' being correctly spelled. They are both dated in the same year of grace, 1760.

His latest date in Herts is 1763 ; but he was founding for certainly nine or ten years longer. After his death the business was carried on for a time by Thomas Osborn, who had been his foreman, and Edward Arnold, Joseph's cousin, in partnership, Arnold eventually obtaining the entirety of it. In 1784 he cast (or probably recast) the tenor at Hitchin, a fine bell, fifty-three inches in diameter, and weighing twenty-eight hundredweight. It will be seen that the whole peal at this church comes from the St. Neots foundry, and it does them much credit, the ring being decidedly above the average in tone and tune. From the fact that specimens from this foundry are found as far off as Kent, they must have had a good reputation, evidently holding their own against the competition of their Metropolitan rivals.

Arnold's successor at St. Neots was his sometime apprentice, Robert Taylor, the progenitor of the family which have been for so many years famous in the craft. Only one of his bells now remains in the county—the 5th at Ashwell, which, as it is dated 1808, should not in strict chronological sequence be noticed here, but is mentioned for reasons of convenience, completing the history of the St. Neots foundry as far as concerns Hertfordshire.

We have now to deal with the man who may be fairly described as the Herts founder *par excellence*—John Briant. He was born at Exning, in Suffolk, and at an early age was sent to a school at Newmarket, from which it was his father's design he should proceed to one of the Universities and eventually take Holy Orders. He, however, had a great

taste for mechanics, clock and chime making specially engrossing his attention, so that he did not follow the course marked out for him by his father. He commenced business as a bell-founder by casting the ring of eight bells for St. Andrew's, Hertford, and his fame as a good founder soon procured him a large connection. His masterpiece is, perhaps, the tenor bell at St. Michael's, Coventry. Most of the eight fine bells at Waltham Abbey were from his hands, as was a charming light ring of eight at St. Alkmunds, Shrewsbury. The six at St. Ebbe's, Oxford, were by him, as well as numerous other rings in and out of Herts. But his chief merit, perhaps, was as a "splicer." He was almost unrivalled in adding trebles to rings of bells. Specimens of his skill in this line will be found at All Saints, Hertford; at St. Peter's, St. Albans; at Soham, Cambridgeshire; and at numerous other places, as will be seen by the list of his bells to be given presently.

His bells in this county date from 1782, at St. Andrew's, Hertford, to 1825, at Hinxworth.

He had an excellent tuner of bells—Henry Symondson—who, speaking of him to my informant, Mr. Leonard Proctor, of Bennington, said "that no man took so much pains and trouble as his master in turning out superior bells in perfect tune," and that "oftentimes he would rather lose by a job than have the reflection that he had sent out a bad bell." He had also an excellent foreman as bell-caster, named Henry Skerman, a native of Hertford, who worked with him for above thirty years. He made some excellent clocks, of which the present Town Hall clock at Hertford may be accepted as a fair specimen.

John Briant seldom placed any inscription on his bells beyond the names of vicar and churchwardens, with his own

as founder, and the date. He not unfrequently used an initial cross, and the Masonic Pentacle.

That his reputation, not only as a skilful founder, but as a conscientious man, was widely known, and that he retained it to the end of his long life, is shown by the fact that the Dean and Chapter of Lincoln being sorely perplexed as to the best mode of dealing with their bells, and specially with their well-known "Great Tom" which was then cracked, appealed to him for his advice in the year 1827, he being then about eighty years of age. The queries then put to him by Mr. Edward Betham, the surveyor to the Dean and Chapter, and his replies thereto, are preserved among the cathedral documents at Lincoln. The latter are so characteristic of the man, and show so well the clearness of his intellect and his mental capacity even at that advanced age, that the correspondence may well form a part of this brief sketch of the "ingenious" Hertford bell-founder.

31ST DECEMBER, 1827.

COPY of Queries put to Mr. John Briant, of Hertford, for many years a bell-founder (which he has lately declined) and church and turret-clock maker, aged nearly eighty years, by Edward Betham, surveyor to the Dean and Chapter, respecting the crack discovered in Great Tom o' Lincoln, which was particularly described to Briant.

First.—Could such an accident occur by the accidental or intentional pressure, by any person, upon the bell at the time the clock was striking?

Second.—It has been thought right to discontinue the striking of the clock, and tolling with the clapper for the present; but Mr. Briant is particularly requested to state, with as little delay as possible, whether any further injury would be occasioned by allowing the clock to strike, and the bell to be tolled with the clapper as heretofore?

Third.—Whether any temporary improvement in the tone would be obtained by cutting a piece out of the bell as far or a little beyond the present crack?*

Fourth.—In case Mr. Briant should not think it safe to adopt any of the above plans, it is proposed to let the clock strike upon the tenor bell of the peal of eight in the opposite tower of St. Hugh.

The quarters now strike upon the 4th and 7th of that peal. The treble bell is broken; therefore upon which two of the bells would Mr. Briant recommend the quarters to strike in the absence of the treble, the clock striking upon the tenor in the key of F? Would 2, 5, . . . 8 do?

Fifth and Lastly.—What would be the *probable* expence of recasting this stupendous bell, taking into consideration the getting down and up again, and having to pass through one groined stone ceiling?

And would it be more readily done at Lincoln or in London?

In a letter on the following day Mr. Betham sent a proposition of Poole, the whitesmith of Lincoln, for restoring the tone of this bell. This letter Mr. Betham presumes Mr. Briant had not received when the one enclosed herein was despatched, but Mr. Betham considers this letter as a full answer disapproving of Poole's plan.

HERTFORD, January 2nd, 1828.

DEAR SIR,—Agreeable to your request contained in your favour of the 31st of December, I do myself the pleasure to answer your enquiries.

First.—I entertain no doubt that the fracture was not occasioned from either of the causes you have named.

Second.—By continuing the clock to strike upon the bell, or tolling with the clapper, will probably extend the fracture.

Third.—I am confident that cutting out a piece of the bell as you suggest would not produce any sensible improvement in the tone. Such an operation upon a bell in a peal, as at Peterboro', might not be so

* Mr. Betham, and no doubt Mr. Briant, knew this expedient to have been tried and acted upon for full twenty years with the 6th bell of the old peal of eight in Peterborough town church, but certainly the tone of *it* was anything but pleasant, though perhaps not quite so bad as before that operation was performed.

perceptible when rung with other bells ; but upon a single bell, as at Lincoln, it would be exceedingly palpable. Any attempt that may be made will be attended with great trouble and expence, and be eventually abortive.

Fourth.—As you are so unfortunately placed in respect to your peal of eight in having the treble cracked, and thereby reduced to the necessity of having your quarters strike offensive to the musical ear, it is difficult to recommend which of the others would be best. I should rather that would be left to the musicians of your own neighbourhood. To my fancy the 4th and 7th would be the least objectionable.

I shall now take the liberty to offer you my opinion as to the cause that has produced the misfortune to your Lincoln bell. You state that the fracture is perceivable seven inches upwards from the extremity of the skirt (besides which there is probably a still further fracture *that is not perceptible to the eye*), and which, in my opinion, has been occasioned by the line of the momentum of the clock hammer being in too perpendicular a direction with the bell, and striking on a thinner part than the extreme thickness of the sound ball,* instead of having its impetus inclined to a more horizontal position. Most likely that part of the fracture above the sound ball was done before it extended to the skirt, *at which* time the tone was very little impaired.†

It is worthy of remark that during my late visits to Lincoln I felt a disappointment in the difference of the tone of this bell to what it was when I first heard it about twenty years ago. I thought its vibrations of shorter duration, but I then attributed it to the possibility of age having in some degree dulled my ear. But I now believe my faculty of earing‡ was not impaired, but that the fracture then existed, and has since increased to its present fatal termination.

I will, in the course of a short period, give you the desired information as to the expense of recasting, and also the fruits of my best experience as to the place of founding it—they require more consideration than

* Query Sound Bow.

† These observations apply, I conclude, to the presumed position of the *old* clock hammer, which it appears struck upon that part of the bell which is now cracked, and which was pointed out to Mr. Briant. The clock *now*, and for upwards of fifty years, has struck upon the opposite side of the bell.

(Signed) E. B.

‡ *Sic.*

the time, between this and the departure of our post, allows. I trust you will rest assured of receiving, and that you will command, my best advice and services, either as regards the clock or bells.

Mr. Shaw requests his respectful compliments, and the acceptance of his thanks for your kind attention while at Lincoln. Vale,

(Signed) JOHN BRIANT.

HERTFORD, January 8th, 1828.

DEAR SIR,—I received your second letter duly, and now proceed to answer it. It would be of no use whatever to drill any hole—rely upon it, no more good would result from such an experiment than making the excision you mentioned in your first. It is in truth a *cracked* bell, and my experience of now more than upwards of half a century has never seen any remedy applied to one, although frequently attempted, nor do I entertain the least prophetic knowledge I ever shall; and I should be extremely sorry that any friend of mine should make an attempt to effect what I feel convinced is impossible to be accomplished.

In reply to the material question, contained in your first letter, as to the probable expence, and the most eligible place to recast the bell at, I offer the following as my opinion after the most mature deliberation. It is now upwards of a century since a bell of this magnitude has been founded, consequently no living experience derivable from founders concerned in them is now available to guide us. We must, therefore, place our confidence for success in the account that has been handed down to us by others, aided by our own, and these will concur in giving the most decided preference to London, for this reason:—We know that there is a furnace of sufficient capacity that has been PROVED over and over again, and has at all times been capable of producing that heat to the metal which is the *desideratum* for ensuring a *good* bell; and allow me to remind you heat is of all things what we have most to combat with for success.

I have no fear of a good article with a *proved* furnace; but the great uncertainty of effecting a cast with a *new* one is greatly decreasing the probability of success. Not that I think it wholly impossible; and did I feel myself equal, as I have had so considerable experience in building

furnaces both for myself and others, I should have had no repugnance to make an attempt ; but the anxiety and care it would create upon my mind would be so great as to divest me of that equanimity I find necessary to retain at my advanced years. Exclusive of the great risk of a good cast in a new furnace, there would also be a great additional expense in consequence. A proper furnace would cost about £60, besides which there would be many incidental and necessary expences in a new place of casting, all which would be avoided if founded in London ; and the expense to be considered against this is the amount of carriage. Whether water carriage is available I cannot tell, probably not. If so, and land carriage is resorted to, you can be supplied with a new bell before the old one is removed, and the same conveyance that brings the new one to Lincoln can carry the old one back to London. I have made some enquiry as to the probable amount of the carriage, and, from the best information I can obtain, it would be less in proportion than one to two as to the erection of a furnace. But under every consideration London is the preferable place ; nor is there another furnace *novv* in England sufficient to contain the requisite quantity of metal.

In confirmation of my opinion upon the difference of a new and an old furnace, we have an elucidation of it at Oxford. The great bell there had a new furnace erected to cast it in, and after casting and recasting three times produced the worst of all the great bells in England. St. Paul's, which was recast in 1709 in London, turned out a good one the first heat—the proved furnace in London being capable of producing the requisite intenseness of heat, but which the new furnace at Oxford could not effect after three attempts. And in a work of this magnitude I submit, with great deference, no experiment ought to be tried ; yet, if the Dean and Chapter should desire to have it founded in their cathedral, so far as my best judgment and experience might be rendered useful, it would be one of my highest gratifications to promote their wishes.

It would be impossible, not having particularly noticed the groined roof where you propose to take this stupendous bell up and down, and also some other matters connected with it, to state anything like an accurate sum, but I think the operation of recasting will be from £200 to £250.

In undertakings of this nature, which so seldom occur, I am exceedingly happy that it is to be effected by so liberal and learned a body as

the present Dean and Chapter of Lincoln, as upon their arrangements everything depends ; and I entertain no doubt a proper regard will be had to obtain the greatest excellence, in preference to adopting a system that has of late been resorted to by inferior bodies, to induce persons contracting to execute their orders at so low a price as to sacrifice all other considerations, of which there is a notable instance recently at Liverpool.

Having myself declined founding, I hope readily to receive your assent, as well as of all those concerned, that I am not influenced by any other feelings in this affair than a most ardent desire to be instrumental in producing as good a bell as the old one, which was the most superior great bell in England, and in the attainment of which object I hope I shall not be found to shrink from any exertions. On the subject of a new or an old furnace I have personally conferred with Mr. Mears, the London founder, whose opinion and mine are in unison in this respect. Should it be thought well, we shall be happy of an opportunity to examine the place, and to confer with you upon any further steps in this business, of which you will be pleased to let me know. Any communication for the succeeding three weeks will find me if addressed to King's College, Cambridge, where I am going to fix a new turret clock.

I am, dear Sir, most respectfully your ob^d servant,

(Signed) JOHN BRIANT.

HERTFORD, January 15th, 1828.

DEAR SIR,—I have discovered since I wrote last that my Amanuensis has fallen into an error in stating the probable expence of recasting your great bell : the expence there stated is from £200 to £250, instead of which it should have been from £200 to £240, the latter being the extreme amount I conceived it could possibly come to ; even if in recasting, the next bell should come heavier than the present one ; and it would be quite impossible for any founder to cast it exactly the same wt. I much regret that such a mis-statement should have occurred, but be assured it was the accidental error of the writer, and not the individual who dictated it, which my rough calculations and copy of letter will evidence. But I have discovered an error of much greater consequence, and I congratulate you, and all those interested for a *new* bell, that it is one which will show that a bell of the same weight as the present one, can be

recast for considerably less than even the lowest sum already named (£200).

The error alluded to is in the accuracy of the weight, this has been variously stated, but none of them less than 95 cwt. On referring to some observations I made twenty years ago, and which I had no opportunity of referring to when I last wrote, on account of my books and papers being at St. Albans, from whence I have just returned, I find the true diameter is 6 feet $3\frac{1}{2}$ inches. Now, we have a mode of ascertaining the weight of bells by their diam^r. up to about 5 feet 6 inches to a great nicety, and although this, which is beyond all rule that we have on account of its greater diameter, yet we can ascertain sufficiently to know it cannot be any such weight as 95 cwt. I believe 88 will be the actual weight, and in this I am confirmed by the opinion of Mr. Mears, the London founder, a man who has cast more *great* bells than all his competitors have *small* ones; and he lays it at rather less. Therefore, taking into consideration the reduction in the weight of metal to be cast, and the risk to the founders is thereby reduced, I think it may be re-cast in London for £165, taking the weight at 88.

I have at this instant such imperious claims on my time at Cambridge, that I cannot do all I wish, and I mean, as to ascertaining the *precise weight*; but when I return, which will be in about a fortnight, I will, by taking the cubic inches of metal it contains, which I can very well ascertain, knowing the exact thickness in every part.

I am, respectfully,

(Signed) JOHN BRIANT.

Mr. Briant's advice was not immediately followed. In June, 1831, an attempt was made to prevent the extension of the cracks by cutting a piece out of the bell: this, as Briant warned the Dean and Chapter, proved "eventually abortive," a large piece of the rim broke off, and soon afterwards, in 1834, the bell was broken into pieces and had to be recast as recommended by Briant. This was effected at the White-chapel foundry in London by its then occupant, Thomas Mears, the younger.

It is melancholy to have to state that the latter part of the

life of one so honest and true was far from prosperous. He fell into extreme pecuniary difficulties and was eventually driven to seek a home in the Spencer Almhouses, St. Albans, where he died on Friday, the 27th February, 1829, in the eighty-first year of his age.

It is said by some that unfortunate family differences were the cause of his poverty, but Mr. Lewis Turnor, the author of the "History of the Borough of Hertford," published in 1830, who doubtless knew him well, gives other reasons for his distressed circumstances. He writes :

"That Mr. Briant should have died without having realized any property may to many appear surprising, but to those who were more intimately acquainted with his modest and generous nature, and who knew the extreme liberality which he displayed in all his dealings, as well as the aversion he ever felt in pressing for a discharge of his accounts from those who ought never to have subjected him even to an application, it was not a matter of wonder, though of sincere and extreme regret."

Henry Symondson relates that Briant "would have one gross of iron screws put into his coffin, which was done." After death his body was brought from St. Albans, and buried in All Saints' Churchyard, Hertford, when a muffled peal was rung upon the ten bells by the Hertford College Youths. He was twice married, and left two daughters, one by each wife, but no son.

The site of his foundry, near Castle Lane, is now occupied by the premises of Mr. Simpson, bookseller and printer.

In a book entitled "Name Book," preserved in the chest of the "College Youths of Hertford," is the following list of bells cast by John Briant. It is undated; but as it includes the ring at North Mimms, cast in 1806, it must have been compiled after that date.

ENTIRE PEALS CAST.

	No. of Bells.	Weight of Tenor.
Codicote, Herts	5	10 cwt.
St. Andrew's, Hertford	8	16
Rushden, Herts	5	7
Hatfield, Herts	8	26
Hanwell, Oxon	5	9
Adderbury, Oxon	8	25
St. Ebbe's, Oxford	8	5 (? 25)

Some few of these have been since recast, or their numbers in the peal altered by the addition of one or more smaller bells. The following Hertfordshire bells may be added to the list :— Abbots Langley, tenor ; Little Gaddesden, 1 and 2 ; Hertingfordbury, 3 ; Hinxworth, 1, 4, and tenor ; Knebworth, 5 ; Little Munden, 3 ; Norton, treble ; St. Peter's Church, St. Albans, 4 ; Stanstead Abbots, treble ; Stanstead St. Margaret's, single bell ; Tewin, treble ; and Walden St. Paul's, 4. A formidable list in all, testifying most strongly to the capacity, earnestness, and integrity of good John Briant, one of Hertfordshire's worthies, although occupying only the position of a tradesman—one who did with all his might whatever his hand found to do.

John Briant's work, it will have been noticed, stretches over the last quarter of the eighteenth century and the first quarter of the present one. The remaining bells of this century have now to come under brief review. They are, as may well be conjectured, mostly of London make—the Whitechapel foundry contributing the larger proportion of these.

This foundry, which we left in or about 1781 (the actual date being 1784) in the hands of William Mears, passed in 1791 to his son, Thomas Mears (the elder), who had for the previous four years been in partnership with him. Striking evidence of John Briant's well-deserved local fame is to be found in the fact that during his business career, so far as can be traced by present examples, only eighteen bells were supplied to the county by the Whitechapel firm, although confessedly the largest bell-founders in the kingdom. These eighteen are : the peal of six at St. Stephen's Church, St. Albans, by the above Thomas Mears the elder, dated 1803 ; the peal of five at Barley, dated 1807 ; and the clock bell at Broxbourne

(1809), by Thomas Mears and Son, a partnership which existed from 1805 to 1809 ; and the six middle bells of a peal of eight at Chipping Barnet, dated 1811, by Thomas Mears the younger. Briant's retirement, however, threw a good amount of business into Mears's hands, and from 1825 to 1843 we have over thirty bells cast by him. His successors—in the following order : C. and G. Mears, G. Mears, G. Mears and Co., Mears and Stainbank—from 1844 to 1883, are all and each well represented in the Hertfordshire steeples.

The Crescent foundry in Cripplegate, belonging to Messrs. John Warner and Sons, has since 1850 done a considerable amount of casting for the county. "Old John Warner" was casting bells for the last ten or fifteen years of the eighteenth century (none, however, for Herts) ; but for some reason or other this branch of their business was dropped, and resumed only in 1850. The *peals* by them are those at Ayot St. Peter and Elstree.

C. S. Osborn, of Bishopsgate, London, cast the single bell for Thundridge in 1853. This completes the Metropolitan bells ; but there are two other country foundries to be noticed.

Robert Taylor, of St. Neots, has already been mentioned. The business was removed to Oxford in 1821, the firm being then R. Taylor and Sons ; and in or about 1839 a branch business was established at Loughborough, which eventually became their sole foundry, and is continued there to the present day, under the style of John Taylor and Co.

Symondson, once John Briant's foreman, appears to have transferred his services to them, whether as foreman or actual partner is not clear ; but the fifth bell at Redbourne in this county bears the inscription "TAYLOR & SYMONDSON, BELL-FOUNDERS, OXFORD, LONDON, & LOUGHBORO', 1839."

Messrs. Taylor's other Hertfordshire examples are all of quite recent date. Praise of the work of the founders of "Great Paul" is superfluous, although a cockney may well be pardoned for regretting that the Dean and Chapter of St. Paul's did not think fit to entrust the casting of this last-named bell to one or other of the founders of the City in which their cathedral stands.

Messrs. Gillett, Bland, and Co. (now Gillett and Co.), of Croydon, Surrey, have contributed a small quota to the county bells, notably Nos. 1 and 2 at Tring, the clock bell at Chorley Wood, and the two "quarter bells" in the clock tower at Hoddesdon. Bell-founding has only of recent years been added to their original clock-making business, and their productions are rather to be found in secular than in sacred edifices; but their work is good and thorough, and is making its way steadily against their competitors.

END OF PART I.

PART II.

LOCAL USES IN HERTFORDSHIRE.

NO book dealing with the bells of a county would be complete which did not contain an account of the uses made of them—whether local and peculiar, or general—in common with bells in other counties.

And, indeed, for some people this part of bell-lore is the most attractive, as that which recalls memories of past joys or sorrows, or, for the antiquary, as dealing with customs and usages of old time which have long since passed away.

At the present day, so far as we can gather the mind of the Church of England from her Prayer Book, one bell is all that seems to be required. The sole rubric dealing with the matter orders the curate that ministereth to “cause a bell to be tolled . . . a convenient time before he begin”—daily morning and evening prayer—“that the people may come to hear God’s Word, and to pray with him.”

The Canons, however, contemplate the use of more than one bell. The sixty-seventh, after ordering the use of the passing bell, directs that after death no more than “one short peal” is to be rung, and one other before the burial, and one other after the burial. The eighty-eighth Canon clearly places the government of the belfry in the hands of the parish

priest and the churchwardens, forbidding ringing, except with their permission, at other times than is especially prescribed.

In medieval times it was different. Two bells (to which should probably be added a sanctus bell) appear to have been the minimum complement of a parish church. No doubt before the Reformation the bells were heard much more frequently than now. Where the Canonical Hours were kept, they would be ringing frequently and regularly by day and by night, answering very much the purpose of a clock; and the different ways in which they were rung told the service then about being said. In early days the bell-ringers or campanarii—at all events in the cathedrals and large parish churches—formed a distinct order of clerics in minor orders. This was the case at St. Paul's Cathedral, certainly as late as the time of Henry III., as the archives of the Dean and Chapter clearly show. On the font of Belton church, in Lincolnshire, is a figure of a campanarius, duly vested, chiming two bells.

Local uses may be divided into two classes—ancient and modern—comprising among the former those which at the present day are continued, although their meaning has been lost or perverted—such as early week-day or Sunday ringing, the “Curfew” and “Pancake” bells, etc.; while among the latter it will be more convenient to class those which, although as ancient as the others in their origin (such as ringing for Service and Death Knells), are still adapted to the requirements of the present day, as well as those which are distinctively modern in their inception.

We will take the ancient uses first, dealing first of all with the EARLY SUNDAY RINGING, at seven, eight, nine, and ten o'clock. The seven o'clock ringing only now obtains at four churches in the county—at Much Hadham, where the tenor is

rung and called the "Sermon" bell; at Tring (treble); and at Watford and St. Stephen's Church at St. Albans, at both of which the 1st and 2nd bells are chimed. At other churches, however, this has only been discontinued of late years. Rickmansworth, for instance, retained the custom until six years ago—the 1st and 2nd being rung. At St. Peter's Church, in St. Albans, until 1879 the 4th bell was rung at this hour. Bishop Stortford "formerly" had a full peal; at Hitchin the treble was rung; and at Ashwell a bell (which, is not stated). At this last place it was known as the "Horse-keepers" bell—doubtless from the habit of those in charge of those animals to rise by it to attend to their duties of feeding, etc.—a perversion of the original meaning of the ringing, which was to call the faithful to Matins.

Ringings at eight o'clock (the usual time for Matins) is very much more common—thirty-three churches still continuing the custom, while at three more it has been discontinued within living memory. Among the thirty-three churches are Little Gaddesden, Ickleford, Kelshall, Willian, Aldbury, Aldenham, Broxbourne, King's Langley, Pirton, Redbourn, and Stapleford. It is not known which bells are used at these churches. At Rickmansworth the treble is used; at Great Amwell and Tring the tenor; at Little Berkhamstead, Little Hadham, and Little Munden the 1st and 2nd; at Abbots Langley three bells are chimed; at Hertingfordbury "bells," how many not being specified; while at Standon there is a peal for five minutes. At Watford it was formerly the custom to use the 4th, but since there has been a celebration of Holy Communion at this hour the 1st and 2nd have been rung. At Hitchin, similarly, the 3rd and 4th were formerly used; the present custom not being specified.

At some places this bell is called the "Sermon" bell; *e.g.*, at Barley, Braughing, and Bishop Stortford, at all these three the tenor being rung (the last-named place had formerly a full peal), at Pelham Brent (3rd), Watton (3rd), Bennington (treble), Thorley (treble), Ridge (treble), Royston (1st and 2nd), and Norton.

The origin of this "Sermon" bell at this and other hours is somewhat obscure. It would seem most likely to have originated in the early days of Queen Elizabeth's reign, when for a time many churches were served by "Readers," the regulations for the employment of whom are to be found in Cardwell. They were strictly forbidden to preach; and an early peal at one or other hour on Sunday seems to have been intended to announce a sermon by some priest, licensed for such work by the bishop of the diocese.

At Ashwell the treble is rung at eight, and is called the "Sacrament" bell, there being probably a celebration at this hour.

The churches where the eight o'clock ringing has been discontinued are Lilley, Albury (treble), and Hexton. At the last place it was called the "Sermon" bell.

The nine o'clock bell, or "Mass" bell, is of rare occurrence in Hertfordshire. It is stated to have been rung at Pirton "from time immemorial." Great Gaddesden, Hinxworth, and Little Berkhamstead also preserve the custom. At Ashwell the 2nd is rung, and is called the "Sunday-school" bell. This last is a very doubtful case of survival. From what has already been stated, it would appear most probable that Sunday Matins and Mass at Ashwell in medieval times were at seven and eight respectively, instead of the more usual hours of eight and nine.

It is stated that the treble used formerly to be rung at Albury at ten a.m. on Sundays. This is the only instance reported from the county; and it is somewhat to be feared that tradition is incorrect in this case, and has shifted the hour from nine to ten, unless it was a "Sermon" bell, as is still rung at Westmill at this latter hour.

Of EARLY RINGING ON WEEK-DAYS (the morning ANGELUS bell) no instances have survived until now. There are, however, records of a bell being rung at four a.m. at the following places:—Hitchin (the tenor), Tring (3rd), Baldock (3rd), called the "Malt-makers'" bell, Ashwell (supposed to be to call the horse-keepers up to feed their horses), and Bishop Stortford. The larger bell in the Clock Tower in St. Albans town was also rung at this hour. This bell is dedicated to the Angel of the Annunciation, Gabriel, and was doubtless placed there specially for ringing the "Angelus" morning and evening, and possibly at noon as well; for the latter custom, common in France, also obtained at a few places in this country—at Cropredy, Oxon, for instance.

Two examples of the EVENING ANGELUS or CURFEW bell still remain. At Baldock the 3rd bell is used for this as for the early morning peal. From March to October it is raised and rung at eight p.m., and, after sinking, the day of the month is tolled. At Hitchin the tenor is rung for ten minutes at this time on week-days, from 29th September to the 25th of March.

Tradition has also preserved other instances of this old custom at Ashwell, Harpenden, Bishop Stortford, Tring, and St. Albans, on the "Gabriel" bell just mentioned.

The "PANCAKE" BELL—really the Shriving bell, rung on Shrove Tuesday to call men and women to confession—is still

rung at Ashwell at noon; the 5th bell being used. It was also rung formerly at Baldock, Hitchin, and Hoddesdon.

Of RINGING ON THE GREAT CHURCH FESTIVALS there are many instances. Easter, the Queen of them, is ushered in with peals, at five or six o'clock in the morning, at Aston, Ickleford, Albury, Barley, Cottered, Datchworth, Royston, Knebworth, Rushden, Sawbridgeworth, Walkern, Ware, Hertford (All Saints), Hitchin, Bishop Stortford, Little Hadham, Hemel Hempstead, and Redbourn. At Baldock there are peals both in the early morning and on the Eve.

The Feast of the Nativity—as may be well understood from our insular custom of regarding this as the principal time for merry-making—is still more honoured. There are peals on Christmas eve at Abbots Langley, Ashwell, Cottered, Datchworth, Pelham Brent, Sawbridgeworth, Watton, St. Albans (St. Michael's and St. Stephen's Churches), Redbourne, Bovington, Flamstead, Royston, King's Walden, Ware, Baldock, Barkway, Braughing, Great Gaddesden, Hemel Hempstead, Hinxworth, King's Langley, Standon, and Wyddial.

The Day itself is marked by peals in the early morning at Rushden, King's Walden, Walkern, Ware, All Saints' and St. Andrew's at Hertford, Hitchin, Wyddial, Royston, Albury, Aston, Ickleford, Essendon, Standon, Bishop Stortford, Barley, Cottered, Datchworth, Baldock, Knebworth, Little Hadham, Lilley and Meesden.

On Whitsun-Day there are early peals at Albury, Aston, Bishop Stortford, Little Hadham, Ickleford, Walkern, and Ware. Ascension Day is marked by ringing at three places only—Abbots Langley, Baldock, and Ickleford.

To pass from Festival to Fast, Good Friday, so far as information goes, is specially marked in one parish alone—

Ayot St. Peter—where the Cemetery bell (query, the bell of the old disused church) is tolled thirty-three times at three p.m.—“the ninth hour.”

Ringling on New Year's Eve is hardly to be classed among ancient customs; it is more likely to have come in with change and peal ringling in the seventeenth century. It will be noticed here, however, as a kind of link between ancient and modern usages.

Midnight peals are rung at Abbots Langley, Ashwell, Barley, Bennington, Ware, Bovingdon, Cottered, Flamstead, Royston, Sandon, Walkern, Watton, St. Michael's and St. Stephen's at St. Albans, Anstey, Ayot St. Peter, Barkway, Little Berkhamstead, Little Munden, Norton, Wyddial, Bishop Stortford, Great Gaddesden, Hemel Hempstead, and Hertingfordbury. Particulars as to the ringling on this occasion at these places are not given.

The old year is rung out, and the new one in, at Much Hadham, Little Hadham, All Saints' and St. Andrew's, Hertford, Hitchin, King's Langley, Lilley, North Mimms and Bramfield.

At Ickleford and Pelham Furneaux there is a muffled peal at half-past eleven p.m.; and at midnight the new year is welcomed with a joyous open peal. At Braughing the proceedings are more elaborate—the bells are rung all the evening until ten o'clock, when the ringers adjourn to a plentiful supper provided by the vicar. At a quarter-past eleven they return to the belfry and ring a dumb peal until midnight; the muffles are then removed and a peal rung for about an hour.

We have to deal now with the modern uses of the county bells. These, as regards ringling for Divine Service, need

only very brief mention. The most usual practice seems to be to chime for twenty or twenty-five minutes before service, and then "ring in" on one bell, generally the tenor. There are, however, as will be well understood, many deviations from this rule; but on the principle "*De minimis non curat lex*," it is not conceived advisable to occupy several pages of this book in detailing the various local "rituals of the bells" which obtain in many of the town and country churches of the county.

SUNDAY MID-DAY RINGING obtains in several places. It is difficult to say with regard to this whether it is a survival. It *may* be a reminiscence of the mid-day Angelus bell; but this is so exceedingly doubtful that it is deemed best to class it with modern usages.

At Bennington and Hitchin the treble is rung at the conclusion of morning service, and the same at Thorley, "to show that service is over."

At St. Stephen's Church, St. Albans, the 1st and 2nd are chimed.

The treble at Rickmansworth is rung at one p.m. This seems to be the most likely case of "survival."

Places where the custom was formerly observed are the following:—Walkern, where the tenor was rung after morning service if evensong was to follow; at Bishop Stortford a bell used formerly to be rung at one p.m.; at Albury the treble was rung at two p.m.; at Watford the 4th bell was rung after morning service, "to give notice to gentlemen's servants to get their masters' carriages ready." In the interest of the "survival of the fittest" one can hardly regret that this last-named custom has died out.

The "SERMON" BELL has already been noticed when

dealing with the eight o'clock peals. There are many other instances of its use, at other times, throughout the county, generally either before or after the ringing (or chiming) for service. For instance, at Rushden, Sawbridgeworth, Barkway, Much Hadham, Little Hadham, King's Langley, Standon, and Widford; also, formerly, at Walkern and Baldock. Variations from this are the following: at Pelham Furneaux the tenor is rung at two p.m. in addition to the eight a.m. ringing, as previously mentioned; at Ridge the treble, after morning service; at Pelham Brent the 3rd is rung at two p.m., and called the "Sermon bell for afternoon service."

The use of the church bells in connection with WEDDINGS has almost universally sunk into a question of £ s. d. with the "happy pair;" there are therefore only a few instances of past and present usage of a different character to be noted with regard to this.

"BANNs PEALS" used to be rung at Hinxworth on the first Sunday of publication. This custom has apparently died out altogether, as this is the only mention in the reports kindly furnished by the parochial clergy.

Wedding peals are rung at Essendon after the ceremony, and also in the evening. At Stanstead Abbots there is a short peal after the wedding, for which payment is optional; if more be required payment is expected. At Wyddial they "ring them in;" *i.e.*, a peal is rung when the newly-married return from the honeymoon.

We come now to the more solemn subject of ringing in connection with the time when "man goeth to his last long home;" and this, clearly derived from the ancient custom of the "Passing" bell, calling all to pray for the welfare of the

neighbour departing this life in His faith and fear, demands a detailed account. However little the church bells may peal "over hill and dell" on other occasions, they are never silent on this.

The "Passing" bell, properly so called—*i.e.*, a bell rung while the dying man or woman is actually passing away—is not, so far as is known, ever rung now. In a few instances, however, there is a near approach to this good old custom. For instance, at Hexton, Little Munden, Sandon, and Royston the death knell is tolled as soon as notice is given to the parish clerk or sexton.

At other places it is rung on the day following the death. This occurs at Barley, Braughing, Layston, Thorley, and Wyddial; the hour not being stated. At Chipping Barnet it is rung between eight a.m. and noon. At the St. Albans churches, and at Essendon and Kensworth, it is the rule to ring twelve hours after death. At Cottered, Kelshall, Pelham Brent, Ware, Little Hadham, and All Saints', Hertford, it is rung twelve or twenty-four hours after death. Abbots Langley, Meesden, Aspenden, and Bishop Stortford apparently allow the full twenty-four hours to elapse before the death knell is tolled. The duration of it varies from twenty minutes to an hour.

The number of years of the departed is tolled at Chorley Wood, Ickleford, St. Ippolyts, and Willian; while at Walkern the age is approximately denoted by the use of different bells for different ages.

The reason why the death knell is so frequently postponed until the following day is not easy to guess. It may have originated in the Protestant prejudice against praying for the dead; anyhow it is a fact. Upon inquiring at one place as

to this, the reply was, "The people here don't approve of the bell being rung as soon as death takes place." "Why?" was the next question, which received the straightforward bucolic but eminently inconclusive answer to the seeker after knowledge, "I don't know." Similar inquiry pursued elsewhere resulted in an attempted explanation to the following effect:—"Sir, it looks as if you were glad to get rid of the party."

In ringing the death knell it is almost invariably the custom to denote the sex of the departed by what are technically known as "tellers." What may best be described as the normal use as to this is, three times two strokes for a female, and three times three for a male—this last-named use of three \times three clearly explaining the meaning of the old proverb, "Nine tailors make a man;" *i.e.*, "Nine tellers mark a man."

This normal use, however, has many modifications, and, indeed, in some places "tellers" are omitted altogether. Such modifications will be noticed presently. We will deal with the normal practice first.

Sometimes these are rung *before* the knell; *e.g.*, at Chipping Barnet, Chorley Wood, Kensworth, Pelham Stocking, and Pirton; sometimes *afterwards*, as at Cheshunt, Eastwick, and Bishop Stortford. They are rung *both before and after* at Datchworth, Essendon, Great Gaddesden, Hertingfordbury, Knebworth, and Sawbridgeworth.

At the following places the normal "tellers" are used; but information is wanting as to whether before or after, or both: Abbots Langley, Aldenham, Ayot St. Laurence, Ayot St. Peter, Barley, Bennington, Barkway, Bramfield, Braughing, Broxbourne, Cottered, Digswell, Great Amwell, Much Hadham, Little Hadham, All Saints' and St. Andrew's, Hertford, Hexton, Kelshall, King's Walden, Layston, Meesden, Pelham

Brent, Pelham Furneaux, Redbourn, Reed, Royston, Sandon, Thorley, Walkern, Ware, and Wyddial.

We come now to detail the various modifications of the use of "tellers" which obtain in the county.

At Widford there is no distinction of sex, three times three being used in all cases.

At Anstey, Bovington, Hunsdon, Ridge, and Sacombe, the use is three \times three for a man, three \times two for a woman, and three \times one for a child; at Cheshunt, three \times three for man, three \times two for woman, in both cases on the tenor, while a child is denoted by three \times two on the 2nd bell. Aston has the use of three \times three for man, two \times two for woman. The same custom obtains at Gilston, with the addition of one single stroke for a child.

Standon use is four \times three for man, three \times three for woman, two \times three for child.

Six strokes for a man, five for a woman, and three for a child is the rule at Flamstead.

Six for a man and four for a woman or child obtains at Little Munden; six for a man and three for a woman at Tring. At the St. Albans churches the use is five strokes for a man and three for a woman.

Three strokes for a male and two for a female is the rule at the following places: Ardeley, Ashwell, Baldock, Great Berkhamstead, Caldecote, Clothall, Hatfield, King's Langley, Great Munden, Rickmansworth, Sarratt, St. Ippolyts, Watford, Welwyn, and Weston. At Albury the rule is similar, except that for children no "tellers" at all are used.

Three strokes for a man, two for a woman, and one for a child is the custom at Ickleford, Newnham, Shephall, Stapleford, Totteridge, and Willian.

At Hemel Hempstead the custom is somewhat peculiar. For a man first of all three strokes on each bell, then the tenor is tolled, finishing with three \times three. For a woman two strokes on each bell, then tenor tolled as before, finishing with three \times two. For children the 1st, 2nd, 3rd, and 4th bells are tolled, finishing with "tellers" on 2nd, number of strokes not being stated.

No "tellers" whatever are used in ringing the death knell at Aspenden, Little Berkhamstead, Hinxworth, Great Hormead, Lilley, Stanstead Abbots, Watton, and Wormley.

On the day of the funeral, two bells are chimed at Ashwell an hour before the funeral, to give notice to the bearers. At Braughing the tenor is rung two hours beforehand. At Thorley, also at the same interval, the tenor for adults, and the treble for children. At Pelham Furneaux for adults the tenor is raised and rung two hours before the funeral, and tolled for fifteen minutes immediately before the ceremony; for children the 2nd bell (the former treble) is similarly used.

With regard to the ringing at the time of, or, rather, immediately before, the interment, the usual custom seems to be to toll a bell, generally the tenor, for half an hour previously. There are, however, several variations, but they are not considered of sufficient importance or interest to demand detailing. It may be noted, however, that at Ayot St. Laurence the bell is not always tolled at funerals, because, according to the parish clerk, it "touches" the mourners, and they do not like to be reminded of their loss.

DEDICATION PEALS are rung, so far as is known, only at Ardeley, on the 10th of August; the church being dedicated to St. Laurence. This is rather a revival than a survival, due

to reverence for good old customs of the worthy vicar, the late Rev. W. Malet.

We come now to what may best be described as secular uses—some modern, some old, some perverted instances of survival.

Royal Anniversaries are of course taken due notice of. The Queen's Birthday, for instance, is marked by peals at five a.m. at Abbots Langley, Chipping Barnet, Great Berkhamstead, Flamstead, Hatfield, and Great Gaddesden. Peals are rung also at King's Walden, Ware, Watton, Baldock, King's Langley, North Mimms, Redbourn, and St. Andrew's, Hertford; whilst at All Saints' Church, Hertford, it is marked by ringing "all day." No doubt these are far from being all the examples of the loyalty of the ringers of Hertfordshire, but they are all that have been reported.

The Birthdays of the Prince and Princess of Wales are marked by peals at Great Berkhamstead.

Accession Day is noted at Abbots Langley, Broxbourne, King's Walden, North Mimms, and All Saints', Hertford; Coronation Day apparently only at Watton.

Restoration Day, the 29th of May, is marked by peals at King's Walden, King's Langley, and Watton. The custom also obtained formerly at Essendon, Hitchin, and Little Hadham, but is now discontinued at those places.

Guy Fawkes' Day, November 5th, is also noticed by ringing at Cottered, Pelham Furneaux, Flamstead, Watton, Great Gaddesden, Much Hadham, Hemel Hempstead, King's Langley, North Mimms, Redbourn, Westmill, and Wyddial. The custom has been (very wisely) discontinued at Essendon, Sandon, Little Hadham, Great and Little Munden, and Standon.

The "Vestry" bell—the modern representative, and doubtless in some cases the survival, of the ancient "Moot," or assembly, bell of the people—is rung in many places. For instance, at Ashwell both for vestry and town meetings the tenor is tolled.

The tenor also is rung for vestry meetings at Royston, Ware, Great Amwell, and Digswell;—the treble at Bennington, Essendon, Kelshall, Harpenden, Ridge and Thorley; the 2nd at Kensworth; the 3rd at Rushden and Ayot St. Peter; the 4th at Chipping Barnet, Cottered, Ware, and Baldock; the 5th at Rickmansworth and Tring; the 6th at Hitchin; and the 7th at St. Peter's Church, St. Albans. At Hatfield the 1st, 2nd, and 3rd are chimed for ten minutes.

At the following places a bell is rung, but it is not stated which one of the peal: Bygrave, Buntingford, Little Gaddesden, Totteridge, King's Walden, St. Paul's Walden, Walkern, Willian, Aldbury, Broxbourne, Great Wymondley, and Norton.

At Barley, Sawbridgeworth, Albury, Anstey, Bramfield, Clothall, Little Hadham, and St. Ippolyts the "Vestry" bell is reported to be now discontinued.

Another purely secular use for the occupants of our church steeples was to mark the time in harvest-tide when gleaning was to begin and end; and in country parishes, where clocks are few and watches fewer, the "GLEANING" BELL was a useful institution, and as such, on the Darwinian theory, has survived to the present day in many places. Eight in the morning and five in the afternoon seem to be the most usual hours for its being rung. This is the custom at Ashwell, Barley, Buckland, Bennington, Cottered, Kelshall, Rushden, Sandon, Albury, Pelham Furneaux, Redbourn, Clothall,

Much Hadham, Little Munden, and Standon. At Watton and Thorley the hours are eight a.m. and six p.m.; at Ickleford seven a.m. and six p.m.; at Hertingfordbury eight a.m. and seven p.m.; at Ardeley nine a.m. and four p.m.; and at Pelham Stocking nine a.m. and five p.m. At the following places the custom has been discontinued, mostly quite recently: Aston, Datchworth, Essendon, Flamstead, Pelham Brent, Thundridge, Walkern, Anstey, Baldock, Barkway, Bramfield, Braughing, Little Hadham, Harpenden, Hinxworth, Great Munden, and Pelham Furneaux.

“FIRE” BELL.—This very obvious use for one or other of the church bells seems to have almost died out. The 2nd bell at Tring is called the “Fire” bell; but whether it is actually now used as an alarm is not stated. The 5th is rung at Ashwell, and this seems to be the only example in the county of a *church* bell being used for this purpose. The bells in the town clock towers at St. Albans, Layston, and Hoddesdon of course are so used.

A curious instance of bell usage is reported by Salmon as existing in his time (1728) in Hinxworth parish. He says, page 341 :

“The Cow Commons were given to keep the Church in repair. A tax “for that purpose hath been ever since laid upon the Inhabitants, who keep “84 Cows upon the Common, and pay to the repairs according to the number “of Cows they keep upon the Common, except the Rector, who keeps three “and pays nothing to it. This is kept in memory by the tolling a Bell on Whit- “sun Eve. There is a tradition that this was given by two maiden sisters; “but it is generally thought that John Ward, the Lord Mayor, was the “Benefactor.”

According to Chauncey, this John Ward, Lord Mayor of London, 2 Richard III., was Lord of the Manor, and re-

roofed the church, and so would appear most likely to have been the institutor of the custom. He can hardly be said to have been much of a benefactor, as no doubt rights of pasturage over the common-lands must have been in existence as long as the manor itself.

Many instances of ringing on various occasions, of more or less interest, at Bishop Stortford, will be found in the extracts from the parish accounts given in a later part of this book, under the head of that place. These are extracted from the admirably made transcript of those accounts, which we owe to the persevering ability of Mr. J. L. Glasscock, junr., of that town.

END OF PART II.

PART III.

RINGING IN HERTFORDSHIRE.

ALTHOUGH there is no record to show that change-ringing was practised in Herts so early as in some other counties, there is ample evidence that in the eighteenth century this county possessed bands of ringers who delighted in the music of their steeples. Thus, in 1724 a complete peal (five thousand and forty changes) of triples was rung at All Saints', Hertford. In 1729 "a compleat peal of five thousand and forty changes, in the method of Bob Major," was rung on the then new bells of St. Peter's, St. Albans, by a company from London. Peals were rung by local ringers at Baldock in 1737; Braughing in 1745; Aspenden in 1764; and at Essendon in 1769. In 1777 the ringers of Ridge were evidently imbued with a love for change-ringing, which its three bells could not satisfy; for they record that on the 9th of December in that year a compleat peal of one hundred and twenty changes was rung there by the three ringers, of course on hand-bells, although they do not say so. Two years later, in 1779, the "Braughing Youths" rang on their parish church bells their famous complete peal of twelve thousand two

hundred and forty Bob Majors, which occupied seven hours and thirty-four minutes ; when, as the Peal Board says,

“ It was long each man did stand with zeal,
An ardent union performed the peal,”

and which is still annually commemorated. Peal-ringing is also commemorated during this century at Bennington, Bishops Hatfield, Rickmansworth, Watford, Hertford (St. Andrew's), and Hitchin.

But it was at All Saints', Hertford, that the most important movement was made, by the ringers there constituting themselves, on the 5th of September, 1767, into a Society, under the title of THE HERTFORD COLLEGE YOUTHS.

The Society, when instituted, consisted of thirteen members, who subscribed and agreed to the following articles :—

INTACTUM SILEO  PERCUTE DULCE CANO.

ARTICLE 1.—A Master of this Society shall be chosen by the majority of members on the Annual Feast Day.

ARTICLE 2.—Four Stewards shall be chosen on the said Feast Day by the majority of members present.

ARTICLE 3.—A Treasurer and Clerk shall be chosen on the said Feast Day, in manner following, viz. : The person who served the said office the preceding year shall nominate two proper members, who are Steeple Ringers, to succeed him ; and which of those two persons is chosen by the majority of Steeple Ringing members, shall serve the said office until the succeeding annual feast, or forfeit five shillings, and in such case he shall nominate two other proper members, one of whom shall be chosen in the same manner.

ARTICLE 4.—Whenever by death, misbehaviour, or otherwise, the office of Warner or Beadle to this Society shall become vacant, a new one shall be chosen by Ballot of the majority of Steeple Ringers ; and if the Ballot in this, or any other affair respecting this Society, should be equal, in such case the junior member shall withdraw, and a fresh Ballot taken.

ARTICLE 5.—The Election of Members of this Society as Steeple Ringers shall be in the majority of such members only who have rung one thousand changes, which election shall be by Ballot of such Steeple Ringers who shall be particularly summoned for that purpose.

ARTICLE 6.—Any person who shall by subscribing his name to these Articles become a member of this Society, and who is not a Steeple Ringer, shall not be subject to any of the forfeits specified in these Articles (that in the succeeding one excepted). Every member upon his admission into this Society shall pay one shilling to the Warner or Beadle.

ARTICLE 7.—The Master and Stewards, under his direction, shall have the management of the Annual Feast, which Feast shall be held upon Thursday before Midsummer Day, at which Feast every member shall attend or forfeit 2s. 6d.

ARTICLE 8.—The Treasurer shall receive all money that shall arise by Ringing, and keep the same in his custody, which money shall be parted on the first club night after Christmas-day, and on the Annual Feast day, when every Steeple Ringer liable to receive Benefit according to these Articles shall receive his dividend and pay his forfeits. Nevertheless, if any member chooses to receive his share before such time the Treasurer shall pay it to him, deducting the forfeits he owes thereout.

ARTICLE 9.—There shall be a meeting of the Steeple Ringers of this Society on every Thursday evening; which meeting shall be at seven o'clock from Lady-day to Michaelmas, and at six o'clock from Michaelmas to Lady-day, at which time every Steeple Ringing member shall appear in the churchyard belonging to the Parish of All Saints', Hertford, or forfeit twopence, except detained by sickness, lameness, or infirmity, rendering him incapable of Ringing. And if any member, after having appeared, should go away without the consent of the majority then present before Ringing, he shall forfeit twopence.

ARTICLE 10.—No member of this Society shall receive any Benefit arising from the moneys received for Ringing until he has rung one thousand changes.

ARTICLE 11.—Every member who shall appear to Ring for any Benefit shall receive his full share thereof; and any member who doth not appear shall receive one half part of such share. When any benefit is to be rung for, every member, who is entitled to receive benefit, shall

personally appear in the Bellfry of the aforesaid Parish Church of All Saints', Hertford, within half an hour after the time at which he was summoned to meet, or be deem'd absent if eight members are present besides himself.* And when any benefit shall be rung for at two or three several times in the same day, every member who was present at the first time of Ringing, shall attend at the succeeding times, or procure some other proper member to attend in his stead, or in default thereof shall forfeit sixpence, or receive but half share, which the majority think proper.

ARTICLE 12.—The forfeit money incurred by the Steeple Ringers of this Society by virtue of these Articles (that of non-attendance on the Annual Feast excepted) shall be spent on the evening of the first Thursday after Christmas-day.

The Society held its meetings at the World's End Inn, now known as the Plough. The Annual Festival, which was held on the Thursday before Midsummer Day, was, we are told, so well attended that seldom less than two hundred persons sat down to a dinner served in the Council Chamber of the County Town Hall, and to which the Marquis of Salisbury every year sent a fat buck.

The Minute Book of the Proceedings of the Society, dating from its formation, contains, of course, many entries: the substance of a few may be quoted:—

- 1768—Feb. 20. Edward Barker, one of the members, was expelled the Society, he having rung several times at “St. Andrew's steeple for Hire.”
- 1769—Feb. 21. Another member was expelled “for divers reasons.”
- Aug. 20. 720 changes were rung at Essendon, to celebrate the gift of a treble bell by Saml. Whitbread, Esq., of Bedwell Park.
- 1770—May 3. Isaac Spencer, senr., was elected Warner or Beadle.
- June 5. Several members of this Society having last year paid a

* This sentence is not very clear: it is copied literally from the MS. Book.

visit to St. Albans College Youths, the latter returned the same on this day, and rang in All Saints' steeple, after which the members of this Society dined with them "at Mr. Thomas North's, at the World's End."

- June 28. Henry Dunster, Esquire, was chosen Master; Mr. John Frost, senr., Mr. John Frost, junr., Mr. John Hanchett, and Mr. Jas. Atkinson, Stewards; and Mr. Richard Silverside, Treasurer and Clerk for the year ensuing.
- July 15. Isaac Spencer "having at divers times illiberally reflected upon several of the members of this Society" was expelled. Mr. Wm. Hilliar was chosen Warner or Beadle in his stead.
- Oct. 15. The Parish of All Saints, Hertford, having at the request of the members of this Society agreed to have their two treble Bells and Saints' Bell recast into two Treble Bells, provided it was done by subscription and not by rate, certain members of this Society each subscribed a sum placed against his name, amounting in the whole to £16 os. od.; and there was also received from non-members £8 8s. 9d., making a total received of £24 8s. 9d., which was expended in the recasting and putting up the new bells, and in paying for a Faculty.
- 1771—Nov. 20. The "new peal" was opened.
- Dec. 20. John Hanchett, Esq., presented a new brass Chandelier for the use of the Society for ever, which bore the following inscription:—
- "The Gift of Jno. Hanchett, Esq., A.D. 1770,
To the Hertford College Youths."
- 1773—March 2. A Peal of 5040 changes (Bob Major) rung in honour of Henry Dunster, Esq., who was elected Alderman.
- April 17. William Hilliar suspended from his office of Warner or Beadle for having "ill-treated and abused several of the members at their meeting last night."
- May 13. William Hilliar, on public submission to the members present for his ill-treatment on the 16th April last, was restored to his office. It was, however, agreed that "if in future the said W^m Hilliar shall refuse to obey the reasonable requests of the majority of the members, or behave to the said members in an unbecoming manner, he shall be discharged and immediately expelled;" and if

after such expulsion any member should again propose his re-admission, such member should be expelled [!!].

June 22nd. This order of the 13th May was rescinded.

1782—May 20. 5280 changes Treble Bob rung in “St. Andrew’s steeple, Hertford,” being the first peal that was rung on the new Bells.

1783—April 21. A Peal of “6176 changes of Tribble Bob” rung in 4 hrs. and 2 min. in St. Andrew’s steeple.

[Other peals are recorded].

1789—Jan. 8. At the Annual Meeting of the Steeple Ringing members of this Society, it was unanimously resolved and agreed to subscribe one half part of the money arising from Ringing, until it became the sum of £20, towards the metal and all expence attending the erection of two new trebles in addition to the ring of eight bells then “in All Saints’ steeple in Hertford.” The sum of £4 18s. 10d. was then “resting in the hands of Mr. Matthew England, the Treasurer of this Society, towards forwarding the above business.”

1798—March 30. It was unanimously resolved “that the sum of Ten Guineas be subscribed towards the exigences of the State ; and that the sum of Ten Guineas be annually subscribed by the Ringing Society of Hertford College Youths during the present War, and that the Treasurer do pay the same into the Bank of England accordingly.”

Soon after this date the Society apparently declined ; indeed, so much so, that in 1822 John Carr, a native of Waltham Holy Cross, where his father was clerk and sexton, and who at an early age had learned change-ringing, was engaged by a gentleman at Hertford to instruct a company of young men in the art. He himself tells us that he visited Hertford for three years, and one evening, after walking from Waltham, he conducted and rang in a peal of five thousand and forty changes, on which occasion the following “song” was composed, and may be quoted here as giving the names of local ringers :—

Ringing in Hertfordshire.

I.

Attend, brother ringers, to what I do say—
 In S. Andrew's Church, and on S. Andrew's day,
 At our fam'd town of Hertford the Ringers did meet,
 And rang a true peal of Grand Tripples complete.

A Peal of ten courses,
 Two singles combine,
 With nine dozen bobs
 Makes the music sublime.

II.

These Youths they had been only six months in train,
 And briefly to you I will mention each name ;
 For a progress so great they a pleasure must feel,
 In so soon being able to accomplish a peal.

A Peal of ten courses, etc.

III.

On November the 30th these lads they set to,
 In the year eighteen hundred and twenty and two ;
 When Osborn and Skerman, Bill Farrow and South,
 Carr, Biggin, and Foster, with his brother so stout,
 Rang a Peal, etc.

IV.

This Peal I must own it was conducted well,
 By John Carr, of Waltham, who rang second bell ;
 Changes five thousand and forty they rang then so prime,
 In two hours and forty-five minutes of time.

For a Peal, etc.

V.

Here's a health to these youths in a full flowing bowl,
 Likewise to John Carr, who's a true British soul ;
 May their deeds be recorded in the annals of time,
 And long may they live in the steeple to chime.*

* See *A Narrative of Various Peals in Change-ringing* by John Carr (Cambridge, 1847), p. 6.

Notwithstanding this effort and these good wishes, change-ringing did not prosper in Hertford; for "after the year 1822," writes the Rev. W. Wigram, "the Society sank into a state of suspended animation. There is no record of its meetings between the years 1838 and 1847. There appears to have been an unbroken succession of 'members,' but there is no evidence of the election of any 'Steeple Ringers,' and the ringing degenerated into mere 'rounds,' and 'called peals,' rung by makeshift companies on occasions when fees were paid. Regular practice was dropped altogether."

1869. S. Andrew's Church rebuilt against the old tower.
1873. An attempt made to form a Society of Change-Ringers in S. Andrew's Parish, which failed.
- 1875-6. S. Andrew's tower rebuilt, and the eight bells rehung.
1876. Whit-Monday. A Peal of 5040 grandsire triples rung in S. Andrew's tower by the Cumberland Society (London), in which F. G. Crawley, member of the old Hertford College Youths, took part.
1876. A Society formed in S. Andrew's under the name of the "Hertford Change-Ringers," for the practice of scientific ringing. President, the Rev. W. Wigram, M.A., member of the Ancient Society of College Youths, London, the then newly appointed Rector of S. Andrew's. This Society was joined by two members of the older Hertford Society, viz.: F. G. Crawley, Parish Clerk of S. Andrew's, and Charles Tyler; and the two companies continued side by side, the one practising change-ringing in S. Andrew's tower regularly, the other ringing "called peals," as above described, in the tower of All Saints' Church occasionally.
1879. The bells of S. Andrew's Church rehung and provided with the Ellacombe chiming hammers, the ringing chamber refitted, staircase built, and gas laid on, at a total cost of £175 16s. 10d., raised by John Tasker Evans, Esq., M.D., by means of a special subscription. The tower and spire also repaired, the funds being provided by the Churchwardens.

On the completion of this work the "Hertford Change-Ringers" were publicly, at a meeting held on the 9th of December, 1879,

recognised as the Ringing Society for the whole town. They were formally admitted to both towers by the authorities of both Parishes, and adopted the title of the "Hertford College Youths" in addition to their own name.

On the 9th of November, 1879, they were appointed to ring in All Saints' tower to celebrate the election of the Parishioners' Churchwarden of that Parish—Robert Cocks, Esq.—to the office of Mayor of Hertford.

On the 22nd December their Rules were finally revised and printed.
1881—March. Five members only now remained, who considered themselves members of the older Hertford Ringing Society; three of whom had been elected members of the Hertford Change-Ringers, and the other two had given up ringing.

The Hand-bells (purchased by the old Society on the 12th of March, 1878) were now offered for sale with their box. John Tasker Evans, Esq., M.D., collected the funds (£5 15s. od.) required to purchase them; and they were conveyed to Trustees—viz., the Mayor for the time being, the Clergy and Churchwardens for the time being of the two parishes of S. Andrew and All Saints, and to their successors *ex officio*—to be kept by them in perpetuity as an heir-loom, for the use of scientific Change-Ringers in the Town of Hertford, and for no other purpose.

The Books were at the same time conveyed to the same Trustees, to be preserved among the muniments of the Borough.

THE BOOKS—1. The Minutes of the Proceedings of the Society and Peal Book from 1767.

2. Name Book.

3. Touches, etc., by J. P. Powell, Esq.

THE HAND-BELLS—G F E E \flat D C B B \flat A G F E E \flat D C
B \flat A G F, from which can be formed
rings of twelve in the keys of B \flat C and
F, besides rings less in number.

1882—Feb. 21. On this day eight members of the Hertford College Youths, or Change-Ringers, rang in the tower of All Saints' Church, Holt's Bob and Single peal of Grandsire Triples, containing 5040

changes, in three hours and four minutes. This was the first peal of six of the ringers.*

With this record of the successful performance of the Hertford ringers we may well close our sketch of their Society, with every good wish for its continued prosperity and steady improvement. But any record of the restoration of change-ringing in this county would be incomplete without a reference to probably the best eight bell-ringers in England; namely, the Bennington Company, under the working and active presidency of Leonard Proctor, Esq., of that place. During the last thirty years this talented band has rung peals which are the admiration of all change-ringers; indeed, "Squire Proctor" has done much, by his complete knowledge of the science of change-ringing, as well as by his personal devotion to it, to raise it, and those engaged in its performance, to their proper position in the estimation of all thoughtful church folk.

* For these extracts, etc., I am much indebted to the Rev. W. J. Webber Jones, and to the Rev. W. Wigram, the Rector of St. Andrew's, Hertford.

END OF PART III.

PART IV.

THE BELLS OF ST. ALBANS ABBEY AND CATHEDRAL.

THE bells of the mother church of a diocese deserve a more extended notice than those in any other town or village fane; and as old records relating to them are usually more or less abundant, there is but little difficulty in piecing together the notes referring to them, as will be attempted in the following pages for the bells of St. Albans Cathedral.

Of the bells belonging to the great Benedictine Monastery dedicated to St. Alban, protomartyr of Britain, from the date of its foundation here in the eighth century, to its rebuilding in the eleventh, we know nothing. Indeed, as a matter of fact, we are ignorant as to whether there were any at all; but judging from the fact that Crowland, an abbey no less celebrated than St. Albans, possessed bells, we may fairly conclude that the latter was equally provided.

Upon the appointment, by William the Conqueror, of Paul of Caen, as fourteenth abbot of this house, in the year 1077, the rebuilding of the church was quickly begun, and the tower was in due time completed by him and stocked (*instauravit*) with bells. How many those numbered is not told by the

Chronicler; but probably they did not exceed two, that being the usual number presented to many of the great churches at that early period. Thus two bells were cast by order of St. Dunstan at Abingdon; King Canute gave two to Winchester; and we read of pairs of bells being given to Southwell, Beverley, Stow St. Mary, and other places.

These, the first occupants of the present tower, which (judging from the Chronicler's remarks) seem to have been neither large in size nor musical in tone, quickly received an important addition, and that not from the hands of a Norman churchman, but from the liberality of an English thane. The record of the gift is quaintly preserved by the monkish historian in the following terms:—

He (Abbot Paul) stocked the tower with bells, to which two, larger and more commendable, were added by one of the English nobles, named Lyolf, who dwelt in the woody parts of this country. He being rich in goats and sheep, which night-robbers from all parts stole, sold many of them and bought one bell. On hearing the sound of this, then new and hung in the tower, he merrily said in the English speech, "Eya, how sweetly my goats bleat and my sheep baa!" His wife besides got thither another bell, and the two rang out in most delightful union; which, when the wife heard, she said, "I do not believe that this couple lack God's favour, Who hath united me and my husband in lawful matrimony and in the bond of mutual love."

In the following century—Geoffrey, the sixteenth abbot (A.D. 1119—1146) having previously built the infirmary and its chapel, from which the convalescents were summoned to be fed at the upper table in the refectory, "where the bell hangs"—an imposing ceremony took place within the walls of

the monastery. It was upon the occasion of the visit of Geoffrey, Bishop of St. Asaph, who, "at the request of Abbot Robert (1151—1166) makes chrism and holy oil, confers orders, dedicates altars. He blessed also the Bells of the church of Saint Alban, small as well as great."

It was towards the close of this century (in the time of Warin, twentieth abbot, 1183—1195) that the abbey obtained a privilege from Pope Clement III., affecting the use of the bells in time of interdict. It granted that the abbot and monks of the monastery, or the brethren (friars) of its cells, wheresoever situate, should not suffer the suspension of divine offices for any interdict or excommunication, even should there be a general interdict of the land; but that the abbot and monks, as well as their servants, and those who had vowed themselves to a monastic profession—the doors of the churches being closed, the excommunicated and interdicted not admitted, and only the small bells rung—should celebrate the divine offices with lowered voices, and perform the duties of burial for them.

The reverence paid to the Blessed Virgin was a very prominent feature in the religious life of England in the thirteenth and fourteenth centuries. That reverence found expression at St. Albans in a manner which introduces us to a further addition to the bells of the abbey; and for the first time the Chronicler records the name of a new bell as bestowed upon it at its consecration. Writing under the date of William de Trumpington, the twenty-second abbot, A.D. 1214—1235, he says :

"Concerning a most sonorous bell and six monks first deputed by the afore-

"said Abbot for ringing and singing Mass of St. Mary daily.

"Also a most sonorous bell, specially assigned to this office, consecrated by

“Bishop John, and called by the name of St. Mary, he appointed to be rung thrice daily, in due time to call together the ministers thereto assigned; namely, six monks (including him who officiates at the altar) and other faithful in Christ, and meek and devoted servants of the Blessed Mary, to minister thereat and to pray for the prosperity of the Church and their own.”

It was during the rule of this abbot that two bells (*nolis*) were heard ringing during the “solemn” singing of a sequence which he had caused to be composed in commemoration of “the Blessed Alban our Patron;” and at his burial, the bell “solemnly tolling,” the body was carried into the church, the convent following and chanting the accustomed office.

The sound of the funeral bell of William, the twenty-second Abbot, has scarcely died away when the great bells are sounding out joyous peals to welcome his successor, John II. (*de Hertford*), twenty-third abbot, from 1235 to 1260. The Chronicler relates the ceremony enacted at his creation. He was first nominated by the electors, who then arose and entreated all to pray for him. Prayer having been made by the prior, with the response “Amen” by the convent, and the hymn “*Te Deum Laudamus*” begun, a procession was formed, the abbot-elect being conducted “decently and in order into the church; the prior supporting him on one side, the sub-prior on the other, together with the rest of the more worthy persons of the church next.” He was then presented to “God and the holy martyr Alban at the high altar; the bells being pealed (*pulsato classico*), the organ-pipes sounding, the candles burning round the altar, and the shrine uncovered.” There, prostrating his whole body, the new abbot prayed briefly—it was to be done “from the bottom of his heart”—that he might be made worthy of so great an honour. Then the small bell called “*muta*” or “*scilla*” being touched, the whole

clangour ceased ; and all having said *Pater Noster*, and the prior *Et ne nos*, etc., the ceremony ended.

Under the rule of this abbot, John II., although the bells of the abbey were silent, and the celebration of divine service ceased, during the time the town was under an interdict for the non-payment of money demanded on behalf of the Bishop of Hereford, the convent (under the privilege granted them by Clement III.) observed in chapter the Canonical Hours with Matins in a low voice.

At this period, too, we catch another glimpse of church discipline, though on a smaller scale—when one of the bells of the abbey was tolled at the solemn excommunication of Geoffrey de Childewicke, for having maltreated a servant of the abbot.

So, too, under the rule of the next (twenty-fourth) abbot, Roger Norton (1260—1290), the sound of a bell at the abbey formed part of one of those, to us, curious exhibitions which the monkish chroniclers of the middle ages delighted to record. The abbey possessed a mill, to which the townsmen were expected to resort to full their coarse cloths. The charges there being too high, or the townfolk disapproving of the monopoly established by the monks, resolved to full their cloth elsewhere. The abbot tried to stop this infringement upon his rights, which made the towns-people very angry, upon which he opened his spiritual armory ; the convent making special prayers, and asking divine help and the intercession of St. Alban, and the chapter, “a certain great bell tolling,” with bare feet, went often in procession before the high altar to entreat help against the turbulent townsmen.

But the joyous sound of the abbey bells is again in the air, and we listen, while we learn that the Archbishop of

Canterbury, being about this time at Hatfield, was invited to pay a visit to the abbey. Arriving before the gate of the monastery, the convent, fully vested, met him in procession, "and with all reverence, the bell being rung, and saving their privileges, openly received him with the highest honour, as beseemed the father of so great a See, and a man of fame so great."

Such privileges, it may be interesting to note, included one by which no archbishop or bishop was entitled to be lodged in the abbey, unless formally invited. And this privilege was sturdily maintained by Roger's successor, John III. (1290—1301), who, when Robert de Wynchilse, the Archbishop of Canterbury, invited himself to stay in the convent, declined the proposed visit unless prefaced with a letter from the archbishop safeguarding the rights of the convent—the consequence being an interdict, which the monks disregarded; and, as the Chronicler remarks, on the morrow then, the archbishop uttering threats, indignantly went away. An encounter in which the convent evidently "scored."

To go back for an instant to Roger Norton. He not only greatly beautified the monastery by his additions to its buildings, but he gave many vestments and books—one of the latter written with his own hand; and, what is more to our present purpose, he carried out some important work in connection with the bells, thus described by the Chronicler:—

"A great bell truly and a most sonorous one, called by the name of "Saint Amphibalus,* he caused to be made for tolling the Curfew daily; "other two bells in honour of Saint Alban and Saint Katherine being made "at the same time, under the superintendence of Sir John de Marins, then "Prior of this church, out of four old bells broken up, without adding the "smallest quantity of metal."

* The connection of St. Amphibalus with the martyrdom of St. Alban is well known.

Richard II., the twenty-eighth abbot (1326—1335) was the cause of an unexpected peal on the abbey bells. Having been with the king in parliament, the abbot, on Monday the morrow of the Trinity, riding on horseback, entered the town very early in the morning, so unexpectedly that neither the prior, nor any of the convent, nor even his own chaplains, were aware of the fact. He went up to the outer gate of the monastery and there waited until the prior and convent, warned of his arrival and fully vested, received him in devout procession and with “solemn pealing of the bells.”

During the rule of the next abbot, Michael Mentmore (1335—1349), two new bells were provided, and they were consecrated by “Lord Hugh, Archbishop of Damascus,” in honour of Amphibalus and Alban. In his time also, the great bell called Amphibalus (whose casting we have just seen noticed) was broken while the Curfew was being tolled, and was shortly afterwards recast by Friar Adam de Dankastre, in the hall of the sacristy; and most probably the same craftsman was subsequently employed to cast the bell which was called Alban, “in our time”—says the historian—“so commendable for its sonorous tone.”

It is most likely that the whole of this notice refers to the same two bells, and should be read in an inverted sense—the recasting first, and the consecration afterwards. Bells with duplicate dedications are certainly known to exist, but they are most rare, and two duplicate pairs seem highly improbable.

During this abbot’s time—and such were doubtless the customs under the rules of his predecessors and successors—we read of a bell being rung for a long time every day at dawn,* at the sound of which all the brethren priests were to

* The early “Angelus” bell.

rise and proceed to the church ; the same bell sounded (after none) for dinner (prandium), when they were to go to the table and eat together in common. At the hour of Vespers it was again rung, when all the convent were to strive to assemble for hearing and saying Vespers and Compline, and that devoutly and completely.

During the extended sway of the next abbot, Thomas de-la-Mere (thirtieth abbot, 1349—1396), the abbey was much beautified, and the buildings of the monastery extended. He also gave money towards the making of a new bell called "Christ," which was then added to those already belonging to the church. In his time the sound of the great bells was heard at a great function which took place here in the year 1369, at the obsequies of Blanche, Duchess of Lancaster. They were performed at night, and on the following morning, Prime being ended, all the great bells were rung for the Mass of St. Mary, at which (all the convent being vested in copes) the abbot celebrated at the high altar. At the close of that office, the great bells being again rung, a procession was formed prior to Mass for the Dead, at which the Bishop of Lincoln celebrated.

The great bells were heard again in loyal exultation a few years later—in 1381—upon the quelling of the insurrection which broke out under Wat Tyler. King Richard II., upon his arrival at St. Albans, held his court here. He was received by the abbot and convent after Vespers : they went in procession to meet him at the western gate of the monastery, where he was "received honourably, with ringing of bells and chanting due and devout."

Somewhat earlier than this, viz., in the year 1380, an accident happened to one of the bells of the abbey, which might have proved disastrous to some of the monks sitting beneath in the

choir. Their escape from the peril was looked upon as a miracle by one of the Chroniclers, who, in wordy wonder, thus describes the occurrence :—

“A Miracle in Relation to the Fall of a Bell.

“If we leave in writing for those who come after us records of the glories of this world, the various courses of time, and the divers incidents of perishing things, and do this too in a suitable manner, how much more does it behove us to hand down fittingly to our successors those things which by Divine grace the power of the Most High, the right hand of God, is bringing to pass in our midst. Truly a memorial of transitory things should be both written and sought after, chiefly, however, of those things which are called, and are, miracles, manifested and shown forth to us by the Maker of all things, for the glory of a certain saint. Wherefore, due thanks being first of all not unworthily offered to the Creator, and His holy martyr, to wit, blessed Alban, the protomartyr of the English, we deem this miracle worthy of being noted, which the Lord does and shows to us in this year.

“Now the fourth day prior to the Feast of the Passion of the said glorious martyr was at hand, on which, according to the custom of the conduct of spiritual works, the Office of the Dead was said in the convent for the commendation of the late most invincible King of England, Edward of Wyndeshores, when, as is the custom at such chief anniversaries, all the great bells were rung. Whilst they were being pealed, suddenly the bell which was the largest but one, and which was called Alban, becoming detached from its bearings, fell and broke the floor of the tower and two beams upon which the same bell then rested. Now was to be seen a fearful spectacle, the bell lying upon broken beams which were unable to support themselves when relieved from the weight of the bell, and these becoming stronger as if from that immense burden, and so supporting it throughout the whole day, to the admiration of all beholders. But as soon as the bell had, by the skill of the carpenters, been lifted, the very beams which before had sustained it, proved unable when lightened to maintain their position, and being broken into pieces would have forthwith fallen to the ground, if they had not been, by the contrivance of the workmen, secured and bound by ropes and cords, and attached to the upper roof.

“Great indeed and stupendous was the miracle, and one to be attributed to

the merit of the martyr, who caused the broken beams to bear up so heavy a weight, lest the bell should injure his monks who were serving him, and who sat beneath in the choir."

It is somewhat difficult to determine to which bell reference is here made, as there seem to be some grounds for believing that there may have been two bearing the name of St. Alban, one cast during the time of Abbot Roger (1260-1290), the other during that of Abbot Michael (1335-1349); unless, indeed, the bell operations carried out by this last named were simply recastings, which is at least highly probable. The occurrence is, however, at the least highly curious, even if one divests it altogether of the miraculous nature which the simple-minded monks, ever ready to magnify the merit of their martyred patron, easily attributed to it.

In times of public adversity Abbot Thomas appointed the seven penitential psalms, with similar collects, to be sung before the Body of The Lord or the Shrine of St. Alban, the largest bell meanwhile sounding to rouse the devotion of the people.

For some days after the 15th September, 1396, on which day Abbot Thomas, after a long rule of forty-seven years, was buried,

"two larger bells were tolled for a proper time after the Friars' refection, at the Office for the Dead; and after the Mass of St. Mary, at the Mass for him by the Prior, or after High Mass solemnly celebrated by the Monastery. From which no one was allowed to absent himself, but entrance thereto was open to all secular persons of both sexes through the little door of the church."

But these services for the deceased Abbot had to give place to the installation of his successor, John V., the thirty-first abbot (1396-1401). We hear the "Chapter Bell" ringing as part of the ceremony then observed. His short rule of

five years soon necessitated a repetition of that ceremony, when William II., thirty-second abbot, was, in the year 1401, received, says the Chronicler,

“in state at St. Albans by the whole Convent, who met him in procession. He then, having put off his riding gear and put on his frock, was inducted to his stall in the Choir by the ministration of the Prior and Sub-prior. The ringing of the Chapter bell having ended, he went to the Chapter together with his Convent, and there presiding received obedience from every one, as his predecessor had done.”

We must be content with only two more references to the use of the bells in this great monastery: the one shall be to their jubilant sounding in celebration of another so-called miracle, by which a poor lad was restored to life; and the other to their promised use for the spiritual benefit of the reigning king of England after his decease. The former, occurring during the rule of Abbot John Wheathampstead, shall be given in the words of the annalist John Amundesham:

“On Sunday before the Nativity of the Blessed Mary a miracle was divulged by John Turke, then preaching to the people, concerning a boy ten years old of the parish of Hemlamstede (? Hemel Hempstead), who, thrown under the iron wheel of a cart and his head crushed, had blood flowing from his ears and nose, and so to all appearance completely dead, was carried to his father’s house, and by the prayers of his parents, and the neighbours jointly aiding with money and the intervention of the holy Martyr was brought back to life again: and on the day above named, before the Abbot and Convent, the same boy, naked except his shirt, and carrying a lighted taper, together with his father and mother and the rest of the neighbours in solemn procession gave praise and thanks to God. And the Abbot beginning *Te Deum*, the Convent follow with Plain Song, all the bells ringing. And this finished, afterwards *Te Decet Laus* with Antiphons, *Laus Tibi sit, Domino* and *Terræ fundator* with the Versicle *Ora pro Nobis et propitiare.*”

The prospective use of the bells was promised in a grant of

fraternity to Henry VI. in 1459, which so far as it relates to our present subject is as follows :

“We grant yet further . . . every year after your decease . . . when “your obit-day recurs, to keep, observe and maintain that day in offices and “obsequies, in lighting of candles, in ringing of bells, and in all and other “things usual, with solemnity no wise inferior to that with which we are wont “to keep and celebrate the anniversaries of your most illustrious progenitors, “Henry the second, Edward the second, and of your father of holy memory, “Henry the fifth.”

There is one more addition to the bells to be recorded, before the heavy hand of Henry VIII. fell upon the great religious houses of the land. John Stoke, Abbot 1476-1484, “taken,” says the Abbey Register, “from the men of the small Priory of Walingforde,” and appointed Abbot “whilst he lay in bed sick and dying; he left after his death those moneys with which by his disposition that great bell which is called ‘John’ was afterwards made, together with the new glazing of the cloister.”

Richard Boreman, appointed in 1538, was the fortieth and last abbot. On the 5th December in the following year he surrendered the monastery to the Crown. Henry VIII. made a grant of the greater part of the site of the monastic buildings to Sir Richard Lee; the Conventual Church was, however, excepted, and with the lead, iron, glass and bells was subsequently—in consideration of £400—granted by Edward VI. to the inhabitants of St. Albans to be used as their parish church in lieu of the church or chapel of St. Andrew.

A long and tedious search in the Public Record Office for information as to the bells of St. Albans Abbey at the Dissolution has been made with very little result—so little, in fact,

that the information obtained is not worth printing. No light whatever is thrown even upon the number of bells in the Abbey tower, but as Chauncy says there were five in the year 1700, it is fair to presume there were at least that number at the Dissolution. The ancient and massive oak frame for five bells remained in the tower until the year 1872, when it was removed by order of the late Sir Gilbert Scott. Mr. John Harris, C.E., had previously taken measured drawings of it.

The history of these five bells, as gathered from the preceding gleanings from the Chronicles of the Abbey, may perhaps be summed up as follows :

- A.D. 1077-93. Abbot Paul of Caen stocked the tower with (two) bells, and two more (making four) were given by Lyolf and his wife.
- „ 1214-35. Bell “ Mary ” consecrated.
- „ 1260-90. Bell “ Amphibalus ” cast for curfew.
Bells “ Alban ” and “ Catherine ” recast out of the four old bells of 1077-93.
- „ 1335-49. “ Amphibalus ” of 1260-90 recast.
“ Alban ” recast out of “ Alban ” and “ Catherine ” of 1260-90.
- „ 1349-96. Bell “ Christ ” cast.
- „ 1485. Bell “ John ” cast.

So, without knowing their sequence, the five bells at the Dissolution were probably :

1. Mary, cast 1214-35.
2. Amphibalus } cast 1335-49.
3. Alban }
4. Christ, cast 1349-96.
5. John, cast in 1485.

It is, of course, sheer guess work to give the probable inscriptions which they bore—still, judging from the customs of the time, we may hazard the following conjecture on the subject :

- No. 1. either + VOCOR : MARIA
or + AVE : MARIA : GRACIA :
PLENA
- No. 2. + SANCTE : AMPHIBALE :
ORA : PRO : NOBIS
- No. 3. + O : MARTIR : ALBADE :
PRO : NOBIS : SEMPER :
ORATE
- No. 4. either + XPE : AUDI : NOS
or + CELORVM : CRISTE :
PLACENT : TIBI : REX :
SONVS : ISTE
- No. 5. either + Iohannes Est Nomen Eius
or + In Multis Annis Resonet Campana
Iohannis

The five ancient bells were broken up in 1699 by Philip Wightman, and with additional metal cast into six—four of these still remain, the 3rd, 4th, 7th, and 8th, two having been since recast. In 1730, as the inscription on the present 2nd indicates, two new trebles (cast by Richard Phelps) were added, making a ring of eight. The first of these two bells was afterwards recast, first by John Briant, and subsequently by the Whitechapel founders in 1845, it having been cracked during the ringing of the 7 o'clock peal on Sunday, 13th December, 1829.

There is a tablet in the ringing chamber showing that change-ringing was practised here in 1765; but previous to 1872, when the bells were rehung, there had been no ringing for more than forty years. On the 15th October in this last-

named year, the bells again gave out melodious music when the Bennington Society of Change-Ringers rang 2500 changes in seven distinct variations, much to the satisfaction of the inhabitants.

The inscriptions, etc., of the present peal are as follows :

The Rev. John Cole (see 2nd bell) was instituted on the 9th September, 1713, and died in 1754.

* PS Incised.

Mention must here be made of the "Sanctus" or "Priest's" bell, which is without doubt, although unmentioned by any of the Chroniclers, a genuine piece of medieval workmanship. Its comparative insignificance as regards size probably caused it to be neglected by them. It is quite devoid of inscription, but its "long-waisted" shape and its cannons unmistakably point it out as a mid-fourteenth century production—thus adding one to the thirty-one other pre-Reformation bells of this county mentioned at page 2.

In 1552 there were here “iiij bellē in the steple” and “a saunce bell.”§

Two of these ancient bells still remain; and the number “in the steple” continued to be four until about the year 1800, when, the then 3rd being badly cracked, it was removed from the belfry and placed in another part of the tower. There it remained until about sixty years ago, when it disappeared, having been stolen in the night. There is a tradition that it was thrown into a pond in the parish known as Rush Pond, but more likely it was broken up and the metal sold.

In 1552 there were here "iiij^{or} bellē in the steeple,"* which number, if Chauncy is correct, was increased to five before 1700,† in which year the present treble was added, making a ring of six.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Hist. Antiq. Herts.*, p. 110.

The tenor is an interesting ancient bell : the capitals of the first part of the first portion of the inscription, which is in bold Gothic letters, are crowned. The second portion gives the name of the donor, or of the parish priest ("Sir," the common title of priests) under whose care or direction the bell was cast. The last word is a difficulty : it is apparently "Cepute," but may be intended, with the D reversed and so looking like C, for "Depute" or Deputy, but such a word is, I believe, unknown for vicar, the deputy of arector.* It is not unlikely that "Sir Richard Pansan"—the name appears clearly so on the bell—was of the same family as William Paston and Agnes his wife, benefactors to the church of Therfield in 1418.†

The parish clerk here strongly denies the truth of the tradition that one of the bells here properly belongs to Meesden.

APSLEY END.

In 1552 the parish church of "Yardeley" possessed :—

It iij bell^e and a saunce bell in the steeple

It a hande bell.*

The ring, which at that time consisted apparently of four bells, was increased to six in the year 1685, as appears by the following list of benefactors preserved by Chauncy :—

The Inhabitants of the parish by a voluntary collection

an. 1685 gave to the purchasing of the second bell	£22 00 00
Joseph Edmunds, Esq., then High-Sheriff for this county	
gave towards the purchasing of the treble bell	05 00 00
Sir Henry Chauncy, Kt., gave towards the same	05 00 00
John Chauncy, Gent., gave more	03 00 00
Thomas Wilson, Gent., gave more	03 04 06
Anne Hall of Poplar widow gave more	02 00 00

See under Rushden for an unmistakably erroneous tradition as to these bells.

8. RALPH FREMAN ESQ. GEORGE CHANDLER MADE ME 1681
 (Diameter 40½ in.)

In 1552 there were here "iij bellē" and "ij hand bellē."*

The seventh bell was previously inscribed :—

George Chandler made me 1681 Henry Holbeam CW.

The manor of Aspenden was purchased in the 5th year of James I. by two brothers, William and Ralph Freeman, who were London merchants. From William descended Ralph Freeman, who was in many ways a benefactor to this church, and whose name is on the tenor bell. He died on the 26th of November, 1714, aged 88 years, and was buried here. William (see 1st bell) succeeded to the estates. He died on the 6th February, 1749, and was buried at Braughing, to which church he gave bells. Indeed, the members of this family were great lovers of bells and their music. Mr. Cussans relates that the Rev. Ralph Freeman, who was rector here for nearly thirty years, is said to have caused the small door at the west end of the church to be cut through the wall, so as to admit of easy approach to the belfry. One evening, when engaged in his favourite pastime of ringing, news was brought that Harnells, the residence of the Freemans, was on fire. The day being warm, he had laid aside his coat and wig, and without stopping to put them on he hurried off. The result was that he caught a severe cold, which terminated

* *Aug. Office: Misc.*, vol. 497, P. R. Oñ.

fatally on the 8th July, 1772. He was buried in the chancel of Braughing Church.*

There is a peal board dated 24th October, 1764, the gift of Wm. Freman, Esq.

There are some good rules for the guidance of the ringers.

ASTON.

ST. MARY

5 Bells.

1. } REV. M^R ELLIS VICAR. WM. WOLLATT CHURCHWARDEN
 4. } JOHN CALLEN OVERSEER. THOMAS MEARS FOUNDER

¶ *Hist. Antiq. Herts*, p. 325.

AYOTT ST. LAWRENCE (Present Church).

ST. LAWRENCE

1 Bell.

1. CAST BY J. WARNER & SONS LONDON 1881.

(Diameter 28½ in. Weight 4 cwt. 3 qrs. 20 lb. D)

This church, as an inscription on it testifies, was erected in 1778. Its original bell being cracked, and it being impossible to lower it from the bell-chamber, it was broken in pieces and so removed to London, from whence the present one was supplied in 1881 at the cost of Lionel Neville Ames Lyde, Esq.*

AYOTT ST. PETER (Ancient Church).

ST. PETER

1 Bell.

1. JOHN TAYLOR & CO. FOUNDERS LOUGHBOROUGH 1881.

In 1552 the parish church of Ayot Mutfichet possessed :

Itē iij bellē in the steple the compase of the greatest bell vij foote the depthe iij qt' of a yearde.

Itē the compasse of the second bell ys ij yearde ij ynches the depthe di yarde iiij ynches

Itē the compasse of the Littell bell one yarde and iij qrt. the depthe of the same bell ys di yad

Itē ij handebellē.†

This ancient church, which had a detached bell-tower in a corner of the churchyard, was pulled down by the Rev. Ralph Freeman, who was instituted to the Rectory in 1732, and who erected a curiously shaped building which was replaced by a new church in 1862. That church, in which were three bells, was with, the exception of the chancel-destroyed by lightning in 1874, immediately after which the new church mentioned below was erected, it being consecrated on the 26th October, 1875.

One of the three bells destroyed by the fire is said to have been inscribed :

Sancte Petre et Paule ora pro nobis‡

The chancel, which escaped the destruction of the other portions of the church, is now used as a cemetery chapel, and the single bell described above was the gift of C. W. Wilshere, Esq., of the Fryth, Welwyn.

* See Clutterbuck's *Hist. Herts*, ii., p. 255, for a Pedigree of the Lyde family.

In 1552 there were here :—

Itē iiij bellę in the steple

Itē a bell for the Clok.*

Chauncy, describing the bells here in the year 1700, writes : “ A large ring of six excellent bells, the greatest very ancient ; it was baptized in the time that the Romish religion was exercised here.” † Unfortunately, this ancient bell was very shortly afterwards recast.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Hist. Antiq. Herts*, p. 383.

In 1882, four of the bells of the old ring—the 1st, 2nd, 4th, and 5th—were recast, and two additional trebles were added, the whole being rehung in new frames by Messrs. Taylor and Co., of Loughborough.

The four bells then recast were inscribed :—

1st and 4th, present 3rd and 6th. Henry Warner Richard Move
Ch.wardens 1685 James Bartlet made me

2nd, present 4th. Miles Graye made me 1650

5th, present 7th. Thomas Lester of London made me 1742

An eye-witness describes the casting of two of these new bells at the Loughborough foundry on the afternoon of Tuesday, the 10th of January, 1882 :—“The sight was very interesting. A narrow channel led from the furnace mouth to the moulds, and in this duct were placed iron floodgates or stops, by the regulation of which the metal was diverted into the mouths or funnels of the moulds beneath. The precise moment for tapping was one of silent anxiety. At this juncture, with Mr. Taylor’s permission, I went near the furnace-mouth, and offered the well-known prayer : ‘Prevent us, O Lord, in all our doings with Thy most gracious favour, and further us with Thy continual help,’ etc. At its conclusion many of the visitors uttered a fervent ‘Amen.’ In an instant the boiling liquid gushed forth, and sped hurriedly down the previously heated channel to the first ‘swallow hole,’ and in a few seconds the new tenor for St. Laurence’s church [Reading] came into being in its subterraneous chamber. The first floodgate was then raised, and onward the bright stream rushed into the next mould, and so on successively until the whole were cast, and thus, within a very few minutes, was born a sisterhood of eight large bells ; three for S. Laurence, Reading ; three for Thurleston, Leicestershire ; and two for Baldock in Herts.”*

The augmented ring was opened on Easter Monday, 1882, by “Squire” Proctor of Bennington and his band of change-ringers.

There is in the belfry a board recording the ringing on Sunday, the 15th of May, 1737, of a “complete peal of 720 changes College little Bob method in 32 minutes Being the First Complete Peal that Ever was rung in this Tower.”

There is a piece of ground as endowment, it is said, for the curfew bell, called Bell-acre.

* The Rev. Chas. Kerry’s *Hist. of Municipal Church of S. Laurence, Reading*, pp. 90-91.

There is also an ancient bell unhung, on the floor of the bell-chamber inscribed with the salutation :—

∩ (Fig. 11.) ∩ (Fig. 11.) ∩ (Fig. 11.)
+ Ave ∎ Maria ∎ Gracia ∎ Plena
(Diameter 26 in.)

For stamps see p. 14.

In 1552 there were here “v belles in the steeple.”*

Chauncy, writing at the close of the seventeenth century, describes the church as then possessing “a ring of five bells and a turret on the Tower wherein is a clock-bell.”† The ring was augmented to six by John Briant (who recast the old bells) in 1797 : he says in his list, “Barkway, Herts. 6 bells ; weight of tenor, 16 cwt.” The clock-bell mentioned by Chauncy is now used as a priest's bell.

The Rev. J. Street (see tenor bell) was instituted as vicar on the 2nd October, 1777, and died in 1798.‡

(Diameter 36 in.)

Clock Bell: Inaccessible. Probably of same date as the other five.

In 1552 there were "in the steeple iij bellē and a sawnce bell."*

The small clock-bell hangs in a wooden erection on the top of the tower, and is all but inaccessible: this bell is generally supposed to be the one mentioned in Weever's *Fun. Mon.* as being inscribed: Sum rosa pulsata mundi Maria vocata: if so, it is probably the "sawnce bell" of the Edwardian Inventory; but it should be noted that Salmon, writing his *Hist. of Herts* in 1728, includes the bell with that inscription amongst the "five bells" then belonging to the church, but since recast.

The Rev. Charles Chester (see 5th bell) was instituted as Rector on the 2nd of June, 1804: he resigned the living in 1814.†

In 1552 there were "belonging to the parrysse Church of Cheping Barnet"—

Imprimis iij^{or} Belles and a Saunce Bell in the steple.*

The Parish Book tells that the ring consisted of five bells in 1656:—
 Chipping Barnet Parish

An inventory of all such goods that belongeth to ye Parish Church aforesaid taken at a vestrie the evening of the 20th day of December, A.D. 1656.

Item. In the steeple 5 Bells and 5 Bell roopes
 One Parish Clock with 2 long ropes.

These five bells were recast into six in the year 1811; and the present ring was completed in 1875, when the church was rebuilt, by the addition of a new treble weighing 4 cwt. 3 qrs., and a new tenor weighing 14 cwt. 1 qr. 19 lb., F sharp.

The seventeenth century churchwardens' accounts contain some references to the bells:—

		£	s.	d.
1660	Paid for ringing of the 5th of November and the 23rd of April for the Coronation Days	0	8	2
1661	Paid the Ringers on the 5th Nov.	0	6	8
1662	Ap. 18th Paid Mr. Smith the clark in full for his paines in ringing the eight o'clock Bell and keeping the Clock	1	0	0
1666	Aug. 31st Paid to the Ringers on the Thanksgiving day for the victory at sea	0	2	6
	Paid to Robt. Turner for leather to the Bells and Clock Ropes as by his Bill	0	8	3
1667	Nov. 9th Pd. for a staple and leather to ye (2nd) Bell	0	0	8
1668	Pd. for 5 Bell ropes	1	3	4
1675	June 25th Given to the Ringers for ringing on the King's birth and Coronation Days	0	16	8
1681	Pd. for mending all the Bells	1	9	2

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

Given to the Ringers when the King came
home and for Coronation o 6 8

Many similar entries occur in later years.*

The Rev. Benjn. Underwood (see 7th bell) was instituted as Rector on the 14th August, 1781.

Here is a chiming apparatus by which all the bells are easily chimed by one man.

The non-ringing of the bells here upon the coming of Henry Chicheley, Archbishop of Canterbury, to Barnet, on St. Peter's day, 1423 (?), gave great offence to that prelate. He suspended the church and excommunicated John Frende, the bailiff. Shortly afterwards—on the eve of St. Margaret—the rector of the parish and the parish priest, "Sir William," appeared before John Bleburye, Prior of St. Albans, and the elders of the convent in their chapel, and gave as their reason for not ringing in order to show reverence to the Archbishop that it was contrary to the custom of the church—it being in the jurisdiction of the Abbot of St. Albans. An agreement was ultimately made between the Archbishop and the Abbot that in all parish churches, being in the jurisdiction of the Abbey, there should in future be exhibited to him (the Archbishop) and his successors "the reverence of ringing the bells so often as he in his journey should ride through the same."†

BARNET (EAST).

ST. MARY

2 Bells.

In 1552 the "steple" here contained "iij Belles,"‡ which are now represented by two small modern ones which are properly described to me as "simply miserable tinkles."

BARNET (NEW) OR LYONSDOWN.

HOLY TRINITY

1 Bell.

A modern church built in 1864, having one bell of probably about that date.

* For these entries and for other particulars about the bells I am much indebted to W. Osborn Boyes, Esq., LL.B.

† John de Amundesham's *Annals of Mon. St. Alb.* (Rolls Series), vol. i., p. 3.

‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.

BAYFORD.

ST. MARY

1 Bell and a Priest's Bell.

In the year 1552, when an Inventory of the goods "belonging to the pish church of Bayforde" was made, there were here :—

Itm̃ iij bellē in the steple

Itm̃ a sance bell

Itm̃ ij hande bellē

Itm̃ ij sakerynge bellē*

These three bells hung in the ancient chapel, taken down in 1803; they appear to have been represented by only a single bell in the new building erected in the following year. This single bell—quite a plain one—now hangs in the little flèche of the new church, which stands on the ancient site, and was erected, at the cost of William Robert Baker, Esq., the lord of the manor, about twelve years ago. The new small priest's bell was hung at the same time.

BENGEO.

ST. LEONARD

1 Bell.

1. PRAISE THE LORD 1636 ▽ (Fig. 38.)

(Diameter 29 in.)

In 1552 "the prisse church of Bengho" possessed :—

Itm̃ in the steple ij bellē

Itm̃ ij handebellē.†

In 1855 there were here two bells and a priest's bell inscribed :—

1. T. Mears of London fecit 1851

(Diameter 26 in.)

2. Praise the Lord 1636 ▽

(Diameter 29 in.)

Priest's Bell :—

C. S. Osborne Founder Bishopgate London 1854

(Diameter 18 in.)

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Aug. Office: Misc.*, vol. 497, P. R. Off.

Upon the erection of the new church, dedicated to the Holy Trinity, in the year 1855, these three bells were removed to that church, where they were used until the arrival there of a new ring in 1882. The priest's bell and the first bell were then sold to the founders, and the second, or largest, bell was returned to the old church as above, which is now only used for funerals.

HOLY TRINITY

6 Bells.

1. ALL GLORY TO THE FATHER BE
(Weight 3 cwt. 1 qr. 20 lb. F.)
2. WHENE'ER THE SWEET CHURCH BELL PEALS OVER HILL
AND DELL MAY JESUS CHRIST BE PRAISED
(Weight 4 cwt. 0 qr. 8 lb. E $\frac{1}{2}$.)
3. HOLY SPIRIT PRAISE TO THEE NOW AND THROUGH
ETERNITY
(Weight 4 cwt. 2 qrs. 3 lb. D $\frac{1}{2}$.)
4. RING OUT THE OLD RING IN THE NEW
(Weight 4 cwt. 3 qrs. 26 lb. C.)
5. ON EARTH BELLS DO RING IN HEAVEN ANGELS SING
HALLELUJAH
(Weight 5 cwt. 3 qrs. 18 lb. B $\frac{1}{2}$.)
6. I TOLL THE FUNERAL KNELL, I HAIL THE FESTAL DAY
THE FLEETING HOURS I TELL I SUMMON ALL TO
PRAY
(Weight 7 cwt. 1 qr. 6 lb. A $\frac{1}{2}$.)

Each bell further bears the names of the founders, Messrs. Mears and Stainbank, and the date 1882.

This ring of bells (the gift of Robert Smith, Esq., of Goldings) was dedicated on New Year's eve (Dec. 31st), 1882.

ST. MICHAEL AND ALL ANGELS

3 Bells.

This modern church, consecrated in 1872, possesses three small bells, supplied by Messrs. Mears and Stainbank in that year.

CHRIST CHURCH

1 Bell.

Here is one modern and very small bell.

TONWELL CHAPEL

1 Bell.

This school-chapel, built in 1857, has only an ordinary school bell.

BENNINGTON.

ST. PETER

8 Bells.

1. }
 2. } C. & G. MEARS FOUNDERS LONDON. THE GIFT OF
 4. } LEONARD PROCTOR 1853

(Diameters $27\frac{1}{2}$, $28\frac{1}{2}$, 31 in.)

3. JOHN COCK CWARDEN. VOCE TENUI DULCE CANO. JOHN

(Diameter 30 in.)

5. MILES GRAYE MADE ME 1630

(Diameter $32\frac{1}{2}$ in.)

6. PACK & CHAPMAN OF LONDON FECIT 1777

(Diameter 34 in.)

7. JOHN ARCHER C.W. 1626

(Diameter 37 in.)

8. JOHN FISHER CHURCHWARDEN JOHN WAYLETT FECIT 1724

(Diameter 42 in.)

In 1552 there were here "iiij bellē in the steple," "ij handbellē" and "a sance bell."*

Chauncy says there were five bells in the year 1700;† these had been increased to six in 1793, when, according to a board in the belfry, a peal was rung on them. Two trebles were added (the gift of George and Leonard Proctor, Esquires), and the augmented ring was opened on Monday, 29th January, 1838, by the Society of Cumberlands from London. On the following day those ringers (Leonard Proctor, Esq., taking the tenor) celebrated the event by ringing a complete peal of Grandsire Triples, consisting of 5040 changes, in two hours and fifty minutes.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Hist. Antiq. Herts.*, p. 346.

These two trebles, probably not pleasing the correct ear of Mr. Leonard Proctor, who is well known as the head of a fine band of ringers, were, with the 4th bell, recast in the year 1853 as the bells themselves tell us.

Everything connected with the bells is in the best possible order.

BERKHAMPSTEAD (GREAT).

Priest's Bell :—

1851.

(Diameter 14 in.)

In 1552 the parish church of "Barkhamstede Peter" possessed the following bells :

Imprimis iiij ^{or} Belles in the Steple				
The gret Bell by estemacion poꝛ	xviij hundrethe
The next Bell by estymacion poꝛ	x hundrethe
The next Bell by estimacon poꝛ	viiij hundreth
The lest Bell by estimacon	vi hundreth
Itm̄ a Saunce Bell poꝛ	di hundreth
Itm̄ another Saunce Bell poꝛ	xvj pounde
Itm̄ ij handbelles poꝛ	xij pound
S̄m̄ poundres m ^{li} m ^{li} m ^{li} viij ^c xxviij ^{li}				
Itm̄ too Sacringe Belles.*				

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

Chauncy writing of the bells here in the year 1700 says "a ring of five bells not very tuneable."*

These probably remained until the year 1838, for on the 30th December, 1837, at a vestry meeting held to consider the state of the church bells and clock, the churchwardens were directed not only to provide "a new 8 or 30 day clock with three faces of the best possible description in every respect," but also "a ring of at least 8 bells hung and arranged in a scientific and substantial manner." A special rate of one shilling and sixpence was granted, with a guarantee for any further expenditure, and the present ring of bells and a clock with two faces were quickly provided. The new clock cost £210 11s. 11d. and the new bells £429 10s. 9d.†

Edward de la Hay by his will, dated 20th May, 1510, gave among many other gifts "to the reparation of the bells" here 13s. 4d.‡

The churchwardens' accounts of this parish, which are well preserved, give much information about the bells.

In the "Computus" of John Wolverston and John Busch, wardens for the nine years from 1431 to 1440, we find references to the bells, such as:—

Et solutum Johanni Spryngholt pro emendatione unius bellerop	<i>ob.</i>
Et Johanni Spryngholt pro emendatione de lez bauderikes campanarum et pro emendatione de lez belleropes ...	<i>ijd.</i>

It would appear from the following entries in this account that there were at that time five bells here, for whilst there is a charge for *iiij* bauderickes, or leather straps for fastening the clappers to the bells, there is a payment on account of the middle bell:—

Et Johanni Wavell pro una rota facta pro media campana	<i>xviiid.</i>
Et Johanni Sparwe juniori pro emendatione unius bauderike	<i>ijd.</i>
Et Johanni Wrighte pro trussatione magnæ campanæ ...	<i>ijd. ob.</i>
Et pro emendatione unius bellerop pro parva campana ...	<i>ob.</i>
Et solutum pro emendatione <i>iiij</i> bauderickes	<i>iiijd.</i>
Et in uno ligno empto de Johanne Busch pro campanas trussandas	<i>jd.</i>
Et Johanni Carpentario et socio suo per <i>ij</i> dies ad trussandas campanas pro stipendio et mensa	<i>xxijd.</i>
Et Johanni Ricard pro factura de le belleclaper magnæ companæ simul cum cariagio usque Elmedon and re-cariagio ejusdem	<i>ijs. viijd.</i>

Et Johanni Wrichte pro suspensione et trussatione magnæ campanæ	ij <i>d.</i>
Et solutum pro emendatione rotæ magnæ campanæ cum clavis emptis pro eodem opere	vii <i>d. ob.</i>
Et Johanni Ombler pro factura iij bauderikes pro campanis	v <i>d.</i>

These and other payments tend to show that the bells were then much out of order, so we are not surprised to find in the eighth year of this account—1439—that a recasting took place: the entries are, however, only meagre:—

Et Johanni Cotiller pro . . . novis bauderikes pro novis campanis	xvii <i>d.</i>
Et Willielmo Hunte pro factura v bokelles pro v bauderikes campanarum novarum	vd.
Et pro iij belleropis ponderis xiiij lb. pretium libræ <i>jd. ob.</i>	xx <i>d.</i>
Et in uncto pro campanis ij ^o anno infra tempus compoti	vii <i>d.</i>
Et in j corda empta pro parva campana	jd. <i>ob.</i>
Et Johanni Belheme pro dimidio corio equino pro bauderikes	xd.
Et solutum pro v belleropes emptis pro novis campanis ...	iijs. vii <i>d.</i>

The clock is constantly mentioned.

In 1484 we find:—

Item pd. in exsepences at dressyng of the bells	ii <i>d.</i>
Item pd. for a lye to seynte Jones belle	iiij <i>d.</i>

There was a guild or Fraternity of S. John the Baptist in this town: the altar at which the priest served was doubtless within the parish church, and “seynt Jones” bell just mentioned would be the one used specially for the services and purposes of the guild: it will be observed later on that one of the subsequent bells was dedicated to that saint.

About five years—for the date is not quite clear—after these charges, we find that the five bells were taken down and sent to Bury St. Edmunds to be recast by Reginald Chirche, a well known founder of that date. As the accounts give the sources from which the necessary funds were received, and particulars as to the expenses incurred, including that for the benediction of the new bells, it will not be amiss to give them in full—the receipts come first, thus:

1489 (?)

Et de vij^{li} iij^s iiij^d p ipos comput̄ reĉ de collectoribꝫ

1504	Item pd. for making the iiij belclapare to parle of hafele	iijs. iiij <i>d.</i>
	Item to Stoke of hellysnam for v belpypys	iiijs. iiij <i>d.</i>
1506	Item in bred and ale at the takyng downe the broken bell	iiij <i>d.</i>
	Item to John Dane ffyrher for hiering of ij horses in ledying up the bell <i>e</i> to london	xij <i>d.</i>
	Item for richard Newmans expences at the cariage of the seid bell <i>e</i> to london	ijjs. viij <i>d.</i>
	Item expences of the seid Rychard at the fetching home the seid bell <i>e</i>	xvj <i>d.</i>
	Item for tolle of the same bell <i>e</i> at Stansted thele ...	viij <i>d.</i>
	Item to the belfounder... ..	viijs.
	Item in mete and drinke to Spencer and vj other persones helping up the seid bell <i>e</i> in to the stepyll*	xvj <i>d.</i>
	Item for a corde to the sauntes bell	ij <i>d.</i>
	Item for a hyde of whit lether to the bell <i>e</i>	ijjs. iiij <i>d.</i>
	Item for making of v Bawdrikes to the bell <i>e</i> ...	xij <i>d.</i>
1510	Item payd for v foote of tymber to make a porche over the Saunse bell	v <i>d.</i>
1514	Item of Stracy of Reyston for Ryngyng at his buryyng	xij <i>d.</i>
1519	Item pd. to Rafe Thomas for going to Walden for the clokemaker and to Pukriche for Richard Bryan for to make the bell whelis	iiij <i>d.</i>

In 1520 a bell was recast, the parishioners subscribing £4 4*s.* 9*d.* towards the cost. "Wrytynges," or an agreement, was made between the parish and the bellfounder, but the latter appears to have done the work in such an unsatisfactory manner that the churchwarden, John Hawkyn, went "to london to speke w^t the belfounder for to take downe agen the seid bell." There is nothing to show that his mission was successful, so it is probable the parish had to be content with their inferior article: this and more may be learned from the following extracts:—

1520	Item of the parisssheners for the makyng of the bell <i>e</i> iiij <i>l.</i> iiijs. ix <i>d.</i>	
	Item paid for the costs of a man that dide come to see the brokyn bell	v <i>d.</i>

* Although only one bell appears to have been recast, yet in almost all the entries respecting it the mark "*e*" for *s* is added to the word "bell" as given above.

Item pd for makyng the wrytynges bytwene the parrishe and the belfounder... ..	xxd.
Item pd to the belfounder in parte of payment ...	xljs. 1d. ob.
Item pd for fettyng of herry Spencers Tryce* at Ware for to take downe with alle the bellē ...	iijd.
Item pd to herry Spenser for takyng downe and havyng up agen of the seid bellē	viijs.
Item pd for mete and drynke for them that dide helpe downe and up the seid bellē... ..	ijs. vd.
Item pd for the costs of John Hawkyn and of his horse at his rydyng to london to se the bell cast... ..	xxijd.
Item pd in reward to the belfounders servaunts at the castyng of the seid bell	iiijd.
Item pd for the costs of John Hawkyn at another at his goyng to london to speke wt the belfounder for to take downe agen the seid bell	xd.
Item pd to John Kemp for makyng of the gret bell claper and for the caryng of the seyde claper to and fro†	vij. viijd.
and the seid Kemp doth promyse that if the seyde claper do breke w th in the time of vj yeris next after this accompte that then he to make yt agen and to have alowed for his labur but iiijd.	
1532 Item pd to Roger Trenham for makyng of the seynt Joones bell wheele	viijd.

In 1537 an inventory of the goods and ornaments then belonging to this church was made, and a copy upon parchment is now preserved amongst the records of the church. There is no mention made in it of the bells in the steeple, the only entry bearing upon our present subject being :—

Item a sakeryng bell.

Chauncy writes, without giving any authority for his statement, that five bells “in this town were cast an. 1541, and were consecrated with these verses round the several bells :—

1. Hæc quæ Tuba sonat Jesu sit nomine dicta

* This is, I think, a copyist's error : the word should be “Gyn.” J.C.L.S.

† John Kemp was probably also the bell-founder. Thomas Kempe (? son and successor), bell-founder, was buried at St. Botolph's, Aldgate, in 1574. J.C.L.S.

2. Concio ut Divovum, ora tu, dirigat hoc vas
3. Nomine fac Virgo ut sonet hæc campanala tuo
4. Hæc Nola laude tui resonat Baptista Johannes
5. Hæc tibi dicata nota nunc Michael esto.”*

These were most probably the inscriptions on the five bells hanging here early in the sixteenth century, but the churchwardens' accounts do not confirm Sir H. Chauncy's statement as to the time of their casting, but rather point, as we have seen, to an earlier date—1489—as the year in which the whole five were cast, and, as we have further seen, to the years 1506 and 1520 as the dates when two of those five were recast.

The churchwardens charge :—

1546	Item pd for a rope for seynt Joonys bell	iiij <i>d.</i>
	Item to Roger Trenham for makyng of a bell wheele ayenst All haluntyde	iiij <i>s.</i>
	Item paid to Browne the Smyth for mendyng of a bell claper and for makyng of the nepill of the same claper	viij <i>s.</i>
1547	Item payd to Wyll ^m Crab for ryngyng of the day bell and Curfew	iiij <i>s.</i> iiij <i>d.</i>
1548	Pd ffor the Charges Rydyng to the kyngs Comysseners at iij tymes the ffyrste tyme to Ware viij <i>s.</i> <i>vd. ob.</i> at the second tyme at Ware agen iiij <i>s.</i> ix <i>d.</i> , the third to Welwyn viij <i>s.</i> vj <i>d.</i>xx <i>s.</i> viij <i>d.</i> <i>ob.</i>

These Commissioners for Church Goods then belonging to this church were Sir Henry Parker, knight, and William Barlee, Esq. The inventory delivered to them by the churchwarden and some of the inhabitants of the parish is fortunately preserved amongst the parish papers: the following entries refer to the bells :—

Item v bells in the steepill w^t the chyme hammers as they hang w^t roopis to them

Item a litill klok bell hangyng w^owte the stepill

Item a saunse bell and a sakeryng bell

Item ij hand bells and a sakeryng bell.

The churchwardens further charge :—

1548	Pd to Wede Coler maker for makyng the baderyckes for the belles	xx <i>d.</i>
------	---	--------	--------------

* *Hist. Antiq. Herts*, p. 166.

Among the "goods belonging to Stortford cherche," sold in 1551 "for the necessary reparacons of the seid churche," were

Item ij hand bells and a sakeryng bell

and amongst the goods that "do remayn in the cherchwardens keypyng to the cherche" at that date were, according to lists still preserved in the Church records :—

ffyrst v bells w^t ropis and the chym hammers

Item the klok bell

Item the saunse bell

In 1552 the inventory then made was similar :—

Itm̄ in the stepie v bell^e and a lytle cloke bell

Itm̄ . . . ij^o handbell^e and a saunse bell*

The churchwardens further enter :—

1553	Item paid to crabe for rynging the daybell	xij <i>ʒ</i> .
1554	Item [rec ^d] of mysterys Glascoke for the gyft of here husband for the bells	xxs.
1561	Item payd for bread and alle for ye ryngers at the Quenes comyng through y ^e towne	iiij <i>s</i> .
1563	Item for hangyng of a bell	ijs. ij <i>ʒ</i> .
1564	Rec. of John Bayford for the fowerth bell for hys mother			vii <i>ʒ</i> .
1565	Item [rec ^d] of John Parsmith senr. for the grett bell...			xij <i>ʒ</i> .
	Item for Isabells knell the iiiijth bell	xij <i>ʒ</i> .
1567	[Rec ^d] of the honorable lord morley for y ^e knell of Tho Crabbs child	vii <i>ʒ</i> .

In 1572 the churchwardens had trouble with the clapper of the great bell. They appear to have had no confidence in the Stortford smith, for they sent it to Preslond of Hadham Magna, a village five miles from Stortford, who mended it, charging them 6*s*. 8*d*. for the work ; but he evidently did not make a good job of it, as Anthony Bayford had to take it over again to Preslond, who for this second attempt charged them 3*s*. 4*d*. It was sent home, but was a second time found in a faulty state. The churchwardens now fell back upon Warren, the Stortford smith, who appears to have satisfactorily done his work, and who, doubtless, laughed in his sleeve, when he sent in his bill of 12*s*. 8*d*., or rather when he received the money. The churchwardens say :—

1572	Item pd for carrieng ye gret bell clapper to preslons of hadham	iiiij <i>ʒ</i> .
------	---	-----	-----	------------------

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

Inscriptions.

1588	Pd for ringing upon St James daye in rejoysing of y ^e victory		xvs.
	Pd for ringing upon the crownacion daye in rejoysing of the Queenes prosperous Raigne in meate and drinck	xjs.	viijs.
	Pd for Ringing the teusedaye after and for j ^{li} of can- dell in rejoysing of our delyveraunce from the Spaynyardes	viijs.	xd.

* 17th November : Queen Elizabeth's accession day.

1589	Item pd for rynginge at the visitation and on the Coronation day	xvjs. iiij <i>z</i> .
1591	Pd for mending the saunce bell wheel being broken...	vii <i>z</i> .
1600	Item sold the mettall of the litle Broken Bell w ^{ch} Garyes man broke	iijs.
	Item Receyved of Garyes man towards the same bell	ijs. v <i>z</i> .
	Pd for a Roope for the saunse bell	ijs. iiij <i>z</i> .
	Pd for a litle bell w ^{ch} is also broken	ijs. v <i>z</i> .
1601	Item Receyved for the mettall of a litle bell that was broken	vii <i>z</i> .

That these last entries relating to "a little bell" probably refer to a small bell or bells connected in some way with the clock or chimes is shown by an entry made in

1583	Pd for the exchange of the bell for Jack	vjs.
------	---	------

There are also entries "for painting Jack"; "for mending the jack to the chymes"; and again "pd for a Jack for the chymes."

The churchwardens further charge :—

1602	Pd to whalle for rynging sondayes and hollidaies ...	iijs. iiij <i>z</i> .
	Pd to the Ryngers of St. James' daye	ijs. vii <i>z</i> .
	Pd and layed out for meat and drink for the Ryngers the 24 daye of marche as we accompte for the crownacon day	xxvjs. x <i>z</i> .

The clock at this time struck upon the "lytle cloke bell" mentioned in the Inventories, but now the hammer was moved to the great bell, in order, probably, to gain more sound in the striking. This alteration does not appear to have been acceptable, for two years later the "lytle" bell was again brought into its original use :—

1607	Pd to Cooke the snyth for making the hammer of the Clocke to strike upon the Gret Bell	iijs.
	Pd to Tayler for mending the Clock and chymes and making the clocke to strick upon the great bell ...	xiijs.
1609	Pd to Wm Tayler for altering the clocke to the litle bell	vs.
1614	Pd for charges of the Ringers the v of August and coronation day	xijs.
1620	Pd for mending the sancebellhowse and hanging up the bell	ijs. v <i>z</i> .
1622	Pd to Ringers on the v of November	iijs.

1623 Pd for Ringing at the Princes coming home... .. iijs. ij*d.*

In 1624 a new frame was made for the bells ; the three next entries relate to it :—

1624	Gathered by the Towne rate for the making of the fframe for the Bells xxix <i>l.</i> js. v <i>d.</i>	
	Payd to Thomas Allis for making the frame for the bells and some other worke... .. xii <i>l.</i> xvjs. vii <i>d.</i>	
	Pd for carting Timber out of Goose meade to the Church viijs.	
1625	Given to the Ringers on the xxvij th of March last ...	vs.
1629	Pd for Ringing the day that the Kings Ma ^{tie} dyled at the George iijs.	
1630	Pd to old Warman for mending the third Bell when it fell downe iijs. iiij <i>d.</i>	
	Pd for Ringing when the Kings Ma ^{tie} came to the George iiijs.	
1631	Paid for bread and beere for the Ringers at the Bishops vizitacon iijs.	
	Paid to Warman to increase his wages and for Ringing the bell at ix of the clocke xs.	
	Paid for not ringing the 9 of September when the Chancellor came vs.	
	Pd for ringing on the morrow at his going away ...	ijs. ij <i>d.</i>
1635	Pd for ringing when the Palsgrave came to Towne ...	xij <i>d.</i>
	Pd for ringing at the Kings coming and at his Ma ^{ties} retourne ix <i>s.</i>	
1637	Pd to the Ringers when the Chancellor was here ...	3 0
	Pd for ringing at the Kings coming and at his retourne	8 8
1639	Item rec. for a peece of bras 3 <i>s.</i> 6 <i>d.</i> and for a litle bell waying 5 pound 1 <i>s.</i> 8 <i>d.</i> and for farthings a chayne and leade 9 <i>d.</i> 5 11	
1641	Pd to the ringers on the powder treason day 5 of November 2 6	
1648	Pd him [Thomas Warman] for mending the chymes and wyres that the soldiers broke 3 0	
1661	Given to the Ringers at the Kings crow nation ...	5 0

This year (1671) an additional bell was provided, thus making a ring of six, at the expense of the town and the overseers, in whose book the following entry occurs :—

1671	April 24th Mr. Stevens Mr. Holgate Mr. Manistyes and Mr. Matthew Woolley's accompt for a new Bell	£	s.	d.
	Paid for the Bell clappers brasses and wheles	...	60	10 0
	Received of the Towne	...	39	16 6
			<hr/>	
	Due to Mr. Wolley	...	20	13 6
	Ordered that he receive the money of Tho. Scott untill satisfied. [Thomas Scott was collector of the Market House Rents.]			
1680	Pd Mr. Osborne for ringing Kings birth coronation and going and coming from Newmarkett	...	2	16 4
	[In 1681, 1682, and 1684 payments to Ringers on Kings going to and return from Newmarket.]			
1683	Pd Ringers 29 May 1683	...	6	8
1684	May 30th pd for a rope for the saints bell	...	2	0
1684-5	April 4th pd to Robert Bonns for his yeares wages	...	3	9 0
	viz. fforty shillings a yeare to ring the Bell			
	Twenty shillings a yeare to looke after the chymes			
	ffive shillings a yeare to looke after the clocke			
	and fflower shillings a yeare for oyle for the Bells, clock and chymes.			
1685	April 23 given to the ringers when Kinge James was crowned	...	10	0
	June 8th given to the ringers for wringing that the Duke of Mulmone was taken or fled	...	7	0
1688	June 12 Given to the Ringers for ringing for the Prince	...	5	0
1688-9	Feb. 14 Given to the Ringers upon the Thanksgiving day	...	10	0
	Feb. 21. and for ringing when King William and Queene Mary were proclaymed	...	10	0
1696	pd for a rope for the Saints Bell	...	2	8
1698	ffor making Iron worke for y ^e six bells roules	...	0	9 00

In the year 1713, an important alteration was made in the ring of six bells by the casting of three of them into five, and so making a ring of eight. We find from the records of a dispute which arose between the trustees of certain charities belonging to the church and poor of the parish and the churchwardens that the latter did "confess that in 1713 one of the Bells called the Treble being crackt, and the canons of the Tenor Bell broke, and another Bell being out of order insomuch that the said Bells were useless, the Respondents did without the direction of the Trustees employ a Founder to melt three of the largest Bells and made six Bells into Eight, and caused new wheels to be made, but whether the same was contrary to the intent of the donors they submit to the Court, but insist that what they did to the Bells was a real Reparation and Ornament to the church, and conceive they were not by the said Decree obliged to consult the Trustees about employing the Bell founder."

The Lord High Chancellor appears to have given a decision adverse to the action of the churchwardens in this matter of casting the bells, for in the accounts of the latter we find:—

1713 Sep 11 pd Jno. Waylett Bellfounder for new Casting
y^e Bells as per his bill and receipt... ..£44 17 6

Fortunately his bill is preserved amongst the papers belonging to the church; this is a copy:

feb. y^e 6th 1713[4]
Stortford old bells waid 40 cwt. 3 qrs. 19 lbs. Aprill y^e 6 1714
the new bells wt 37. 3. 16 at £20 per T casting 37 18 00
Wast in melting 2. 1. 0
for drilling the old bells 02 03 00
for casting the old brases which waid 0. 2. 15 at 6d. per
pound 01 15 06
for eleven [?] pound of mettle aded to y^e brases 00 11 00
for staing to se y^e bells hanged up and clapered 02 10 00

£44 17 06

Three of these bells still remain.

1730 The tenor bell was recast this year.

1777 The churchwardens charge:—

To ringing the 8 and 4 o'clock Bell for the year 1777 2 0 0
[And the same charge occurs in other years.]

1783	To 8 bell ropes, 82 $\frac{1}{4}$ lb. at 10d	3	8	6
1788	To new cannons puting on the 4th Bell drilling the holes in the Bell and Boreing plates Bolts and Nuts clasps and cramps, etc.	6	6	0

In 1791 the then 1st, 5th and 7th bells were recast, as their inscriptions testify.

1800	The churchwardens charge :—						
	Mar. 8th for makin the Clock to strike on the great bell	1	11	6

In 1802 the then 6th (present 8th) bell was recast by John Briant : the following entries are in his bill :—

1802	May 21 To exchanging the old 6th Bell for a new Bell and fixing p ^r Contract	12	0	0	
	To the extra weight of the new bell weighing more than the old bell 0 cwt. 2 qrs. 0 lb. at £7 per C	3	10	0	
	To a new sett of Bell ropes with worsted sallys	3	3	0	
	To a new top one new bolt and keys to 4th Bell Clapper	0	5	0	
						£18	18 0

In 1805 another “new set of Bell ropes of Eaight salled with the best wosted” were purchased from Mr. John Walker of Cambridge at a cost of £4 4s.

In the year 1819 the eight bells were removed from the bell chamber preparatory to the taking down of the steeple : the following payments were made :—

1819	March 13 [From J. Bangham’s bill] 4 days self 4 days man and 4 days ladd to taken down bells	1	18	0
	March 15 [From J. Fordham’s bill] 1 day to carting the timber of the bells	7	6	0
	May 7 1 days work horse to carting old frames of the bells	7	6	0

The bells were stowed away for a year :—

1820 Rent of a warehouse [to Elizabeth Jones] for the
bells from the 11th March 1819 to 11 March 1820
52 weeks at 1s. 3d. 3 5 0

In the year 1820 John Briant of Hertford was employed to cast two new and additional treble bells and to rehang the whole ring. A peal of Grand-sire Caters of 5039 changes was rung upon them by the Junior Society of College Youths on the 2nd of September in that year. The local ringers were provided with a dinner and beer at the cost of £3 1s., on the 19th July, 1821, and on the following day when the bells were formally opened by them, the Constable, John Sayer, received 5s. for keeping order in the churchyard. Ten bell ropes weighing 55½ lb. cost, with 9s. for salleys, £4 12s. 3d., and John Briant appears to have received at various dates terminating in 1823 £89 for his part of the work.

There have been no changes in the bells since that date, so the churchwardens have little to say in their accounts. In 1828 is the last notice to be found of the Curfew, thus :—

1828 and 50 shillings for ringing the Curfew dew on the
25 of March last.

The chimes continually referred to in the accounts of the churchwardens were constantly out of repair : they are last noticed under the date of 1810 : they, or the remains of them, were probably removed and destroyed when the steeple was taken down in the year 1819. They played several tunes ("Hanover" being one), and sent out their music every three hours, viz., at 3, 6, 9, and 12 o'clock.*

There are several peal-boards in the ringing-chamber.

Mr. Glasscock has kindly furnished the following additional note :—

A bell appears to have been rung at 4 a.m. and at 8 p.m. The former custom obtained as late as 1810, after which no mention occurs of it. The latter—the Curfew or Evening Ave Bell—was certainly rung in 1828, but was probably soon after discontinued.

* For these extracts from the Parish Books of Bishop's Stortford I am much indebted to the courtesy and industry of Mr. J. L. Glasscock, junr., whose excellent *Records of S. Michael's Parish Church, Bishops Stortford*, should be in the hands of all interested in the contents and preservation of such historical documents.

HOLY TRINITY

1 Bell.

This District Church has one very small modern bell.

3. C. & G. MEARS FOUNDERS LONDON 1845

(Diameter 33 in.)

In 1552 there were here "v Belles in the steple w^t a saunce Bell," and also "ij hand belles."*

There is a tradition, which is probably correct, that two bells were removed from hence, about a century ago, to Hemel Hempstead church: Bovingdon being then a hamlet of that town.

BOURNE END.

This Chapel of Ease to Bovingdon is also used as a school, and has merely an ordinary school bell.

BRAMFIELD.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† Not Fig. 18, which as a matter of fact does not occur in this county. Mr. North was misled by an imperfect rubbing, and I accepted his statement that the cross in question was No. 18 without verifying it.—J.C.L.S.

In 1552 there were here "in the steple iij Belles and a sance Bell"; also "ij handbelles."*

These three bells were evidently hanging when Chauncy wrote his *Historical Antiquities* of the county, for he says "three small bells, of which the two greatest are broken."† Those two broken bells have disappeared, in an unexplained way, leaving only the smallest of the three mentioned in the Edwardian Inventory. The proper description of the bells now here would doubtless be "one bell and a Priest's bell," but as the small bell is chimed with the large one for divine service I have said "two bells."

The single bell at Loxwood, Sussex, bears the same inscription as the ancient one here.

On the bell frame is incised the date 1841.

† Page 515.

In 1552 there were here “fyve bellē in the steple and a saunce bell,”* and that continued to be the strength of the ring until the year 1745, when it was augmented by the gift of three trebles by William Freman, Esq.

That gift is thus noted in the Parish Books :—

1744 March 30 William Freman Esqr. of Hammells gave 3 bells to Braughing and made frames and flooring of the Bells new and gave a new flooring for the ringers to stand on by nailing it upon the old one about 7 foot higher. 1745.

1746 October We the minister and Churchwardens of Braughing in the County of Hertford do acknowledge that the addition of three bells and the repairs of the timbers etc. belonging to the bells and bellfry were the free gift of William Freman Esqr. and that he is no ways obliged to repair or uphold the same for the future more than any other parishioner of Braughing. Witness our hands

George Smith, Vicar.

Thomas Poppercome } Church
William Wall } Wardens

The new ring of eight bells was rung for the first time on the 25th September, 1745, and the first Compleat Peal of 50.40 Tripples was rung in three hours and ten minutes September 3^e 30, 1746.†

A much more famous peal was rung on the 10th of May, 1779, which is still commemorated (see p. 88).

The fifth bell is an interesting one, as bearing an inscription from Holy Scripture, and as being the earliest dated bell in the county. This date and the founder's initials IC are on the crown of the bell, close under the headstock, and was thus missed by Mr. North's correspondent.

The inscription (the “riu” in “adiutoriu” being reversed) is no doubt meant for :—

deus in adiutorium meum intende

which is a quotation from Ps. lxx. (Vulg.), lxx. A. V. 1.

O God, make speed to save me

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† Peal Board in Belfry.

These bells are great favourites, being considered very beautiful in tone: Chauncy says, in 1700, "a ring of five excellent bells;" Salmon says, "five good bells," and a recent Guide Book says: "A musical ring of eight bells which are much celebrated," and adds the mistaken report that they "have a considerable admixture of silver in their composition," which would have a contrary effect to the one imagined upon their tone.

William Freman, Esq., the donor of the three treble bells, was the son and heir of Ralph Freman, Esq., M.P. for Hertfordshire, who died on the 12th of June, 1742. William Freman died on the 6th of February, 1749 (see under Aspenden). The Ringers have a set of good rules.

Imprimis ij Belles in the steeple

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

Itm̃ a Saunce Bell

Itm̃ ij handbelles.*

There is a saying very current here, "Worse and worse, like the parson of Bushey," which is said to have arisen in this way: Formerly Bushey had but one bell, which dealt forth a dull "tom-tom-tom," much to the grief of a certain parson of Bushey, who, therefore, added a second bell. But the people declared that the bells were shaming him, for they called out "Tom-fool, tom-fool." Once more he added a bell, but this made matters worse, for the bells now seemed to say "Tom-fool still" and have said so ever since.† Shropshire has also its "worse and worse" story too, but there it is "like Povey's foot." W^m Povey, whose grave is in Broseley churchyard, met, when young, with an accident to his foot, on the strength of which he led a life of idleness. His usual answer to any inquiry as to the state of his foot was that it was "wus and wus," and so the saying "Wus and wus, like Povey's foot" gradually spread throughout the district. The foot, however, says the narrator of the story, seems to have been a long time getting "wusser," for his tombstone records his age as nearly threescore years and ten.

BUSHEY HEATH.

4. MILES GRAYE MADE ME 1651
(Diameter 37 in.)
5. JAMES PULTER MILES GRAYE MADE ME 1650
(Diameter 42 in.)

In 1552 there were here "iij bells in the steple and a saunce bell."*

James Pulter, whose name is on the tenor bell, and who is traditionally believed in the village to have been its donor, was Lord of the Manor. He was descended from Edward Pulter of Wymondley Magna, who purchased the manor in the year 1581. He was born in this parish on the 5th of June 1627, and died, without issue, on the 17th of August, 1659.†

Here are some useful rules (dated 13 Feb. 1865) for the guidance of the ringers.

CROXLEY GREEN.

ALL SAINTS

1 Bell and a Priest's Bell.

These are two modern bells. The larger was supplied to the church in 1872, and weighs 3 cwt. 2 qrs. 17 lb. The smaller bell, which weighs 2 qrs. 8½ lb., was given shortly afterwards, as is shown by the following inscription on the wall of the belfry:—

The Clock and small Bell placed in the tower of this Church were presented in the year 1877 by Caroline Brooke in affectionate memory of her late husband Major-General James Croft Brooke, C.B., who was for many years a resident in this Parish at The Firs, Croxley Green.

DATCHWORTH.

3. }
 4. } ANTHONY CHANDLER MADE ME 1673
 5. }
 6. }

(Diameters 28, 30½, 33, 36½ in.)

In 1552 there were "iiij bellē in the steple."*

Chauncy, writing in 1700, described the ring as consisting of "five small indifferent bells."† It was augmented, as shown above, by the gift of an additional treble in 1875 by Mr. Daniel Pennyfather, an old resident in the parish, who has since died. The whole ring, having been at that time put into good order, was reopened on Easter Tuesday, 1875, by Leonard Proctor, Esq., of Bennington, and his band of ringers, who rang some peals of Kent treble Bob minor and Grandsire Five in masterly style.

Local tradition—doubtless correctly—affirms that the bells by Anthony Chandler were cast on the spot, in the churchyard.

DIGSWELL.

ST. JOHN THE EVANGELIST 3 Bells.

1. T. MEARS OF LONDON FECIT 1829
(Diameter 24 in.)
2. $\begin{array}{c} + \\ \cup \end{array}$ (Figs. 38 and 40.) PRAISE THE LORD 1605
(Diameter 29 in.)
3. $\begin{array}{c} + \\ \cup \end{array}$ (Figs. 38 and 40.) GOD SAVE THE KING 1605
(Diameter 30 in., cracked.)

For stamps see p. 38.

In 1552 there were here "iiij lytell bellē in the steple" and "ij hande bellē."‡

EASTWICK.

ST. BOTOLPH 3 Bells.

1. [□ □ □ □ □ □ □ □ □ □]
(Diameter 27 in.)

* *Aug. Office: Misc.*, vol. 497, P. R. Off. † *Hist. Antiq. Herts*, p. 328.
 ‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.

2. (+ Fig. 19.) *Vox Augustini Senof In Aure Dei*
(U Fig. 20.)
(Diameter 30½ in.)
3. *John Clarke Made This Bell* 1601
(Diameter 32½ in.)

For stamps see p. 20. For No. 1 bell see p. 35.

In 1552 there were "iij bellē in the steple."*

The inscription on the tenor is very indistinct, but the "arke" is (with the date) sufficiently legible for the bell to be decidedly ascribed to John Clarke, an itinerant founder of this period.

There is a tradition current here, and, with an alteration, at Hunsdon, that one of the Eastwick bells fell and was not rehung, but taken to Hunsdon, and is now the treble hanging in the tower there.†

SAM^L WHITBREAD ESQ^R BEDWELL PARK, HERTS. 1765
LESTER & PACK OF LONDON FECIT

(Diameter 22 in., cracked.)

In 1552 “the Parryshe Church of Esengden” possessed :—

Itñi iij belles in the steeple

Itñi ij^o sackeryng belles

Itñi ij^o handbelles

Itñi a saunce bell.†

In 1700 there were five bells,‡ and the number so remained until 1769, when the present treble was given, as its inscription testifies. The minute book of the Hertford College Youths contains the following entry relative to this gift :—

* The church is called “All Saints” on the title-page of a Marriage Register, dated 1754.

† *Aug. Office: Misc.*, vol. 497, P. R. Off.

‡ Chauncy's *Hist. Antiq. of Herts.*, 278.

1769 Aug. 20th 720 changes were rung at Essendon to celebrate the gift of a treble bell by Saml. Whitbread, Esq., of Bedwell Park.

The vestry order book of the parish contains some entries, of no special interest, relating to the bells: a rate was made on the 12th September, 1683, "towards the repaire of the belles;" in the following year another rate was laid for a similar purpose. Under date of

1693 May 22 'The generall consent of the Vestrey whose names are underwritten that the Churchwardens shall give [on] Three ringing dayes the sum of thirteen shillings and the same to be spent at Church Clarkes house and not any whear Else: it is agreed that the Clerk shall have four shillings a year to ring a sermon bell paid by the Churchwardens.

At another vestry, held April 28th, 1788, it was directed that an estimate be obtained from Mr. Bryant for new hanging the bells. An agreement was shortly after entered into with him to new hang the six bells "now in the steeple" for £30. The bell frame was also repaired at a cost of £29.

The following additional orders may be quoted as to the use of the bells:—

1815 March 27 Agreed to allow Moss 6d. per week to Chime the Bells on a Sunday.

1818 March 23 Agreed that the Bells of a Sunday in the morning service that the great Bell shall toll for one quarter of an Hour, than to chime for $\frac{1}{2}$ an Hour than the Little Bell to ring the Parishioners in for $\frac{1}{4}$ of an hour.

The Evening the Bells to Chime for $\frac{1}{4}$ of an Hour and the Little Bell Ting $\frac{1}{4}$ of an Hour.

Wm. Moss to have the care of the Bells and to Chime Ring, etc., as above from $\frac{1}{2}$ past 10 o'clock to 11 o'clock when service is in the morning, and from 2 o'clock to half past when service is in the evening, the above is given to him in writing that the Business may be punctually attended to.*

Samuel Whitbread, Esq. (see treble bell), who purchased Bedwell House and Park, died on the 11th of June, 1796: his son of the same name sold them to Sir Culling Smith, Bart., in 1807.†

* My thanks are due to H. R. Wilton Hall, Esq., for these extracts.

† Clutterbuck's *Hist. of Herts.*, ii. 131, 137.

6. }

(Diameters $32\frac{1}{2}$, 34, $36\frac{3}{4}$, $39\frac{1}{2}$, 44 in.)

In 1552 there were here “*iiij*or Belles and a Sance Bell in the Steple.”*

These were probably re-cast into the above five by Chandler in 1664, for that was the number when Chauncy wrote his History in the year 1700. The present treble, making a ring of six, was a new bell added in 1729.

The Flamstead Society of Bell Ringers, established in October, 1863, have some excellent rules for their guidance.

FLAUNDEN.

ST. MARY MAGDALEN

1 Bell.

+ *gloriu in excelsis deo wk* 1578
(Diameter 18 in.)

In 1552 the ancient church of Flaunden (erected, says Chauncy, by Thomas Flaunden, “in the vale near the river for the ease of himself and the conveniency of his tenants”) possessed “*iiij* Belles in the steple” and “*ij* hand belle *poz viij/i di.*”†

Three bells remained in this ancient church until its demolition on account of its distance from the people, about the year 1838. One bell is said to have been then sold for old metal, and another to a new church near Uxbridge,‡ the proceeds of both being used in aid of the building of the present church, in which hangs the least of the three bells just mentioned. It may be noted in connection with the date of the existing bell that the silver chalice and cover still used at Flaunden bear the date 1577.§

* *Aug. Office: Misc.*, vol. 497, P. R. Off. † *Aug. Office: Misc.*, vol. 497, P. R. Off.

‡ Mr. John Harris tells me the bell hangs at St. John’s Church, Uxbridge Moor, Middlesex, and is inscribed “*Sancte Johannes ora pro nobis 1582.*” He is, however, incorrect as to both inscription and date. See page 35.

† Chauncy says "four bells" in 1700, p. 560.

‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.§ *Hist. Antiq. Herts*, p. 554.

In 1552 the "churche of Gelsone" possessed :—

1² in the steple iij bellē and a handbell.*

Three continued the number until the year 1883, when the treble (cast by C. & G. Mears of London in 1858) was taken down and sold, "as it was of very thin metal and out of tune with the other two." There is no present intention of replacing it with a better, but the tenor is (June, 1883) about being rehung and made ringable, which it has not been for some years.

GOFF'S OAK.

ST. JAMES

1 Bell.

This modern church, consecrated and opened in July, 1862, has a steel bell which is said to have been a specimen shown in the Great International Exhibition held in Hyde Park, London, in 1851.

- Priest's Bell* :— Blank.
(Diameter 10 in.)

In 1548 the churchwardens reported that "Thomas Newes of the said prysh (of Hadam Magna) hathe solde a bell belonginge to the saide churche for the some of xix^{li} v^s, whereof remayneth in thandes of Sir henry Parke' knighte ix^{li} in thandes Aldreede of Dawton vi^{li} and the resydue in the hande of the same Thomas Newes."^{*}

In 1552, notwithstanding this loss, there were still "v bellē in the steple,"[†] and that was the number—"small"—in 1700,[‡] and so, probably, continued, until the gift of the treble in 1738 by Mr. Chase, of whom little is known. The Parish Register records his burial here on the 30th of November, 1741. The Register also records the burial of Sir Richard Chase, Knight, on the 2nd of April, 1788. Whether he was a son of the donor of the bell I cannot say. He is still a prominent figure in the traditions of the place, having, it is said, "kept hounds," and built large stables at the house now called The Lordship, from a close formerly belonging to the manor. By a direction in his will, there was to be no stone to mark the place of his burial, but tradition is unanimous as to its locale, which is in the churchyard at the east end of the chancel, almost touching the wall.

Fox, in his *Acts and Monuments*,[§] gives an amusing account of Bishop Bonner's doings here on the occasion of his visitation, which commenced in September, 1554. On leaving Bishop Stortford, where he had been enter-

tained for some time at the house of Master Parsons, his nephew, Bonner proceeded on his journey to Hadham, attended by a numerous suite. The sound of the church bells of Stortford was gradually lessening in the distance, but the salute of honour was not continued by the bells of Hadham. "What meaneth the knave, the clerk, that he ringeth not? and the parson that he meeteth me not?" angrily exclaimed the prelate. The nearer he approached, writes Fox, the hotter was his fit; and the quieter the bells, the unquieter was his mood. At length he reached the church, but when he saw that the Host was not duly suspended before the altar, and that no "tall well-favoured rood were erected as enjoined, he curtailed his small devotions and fell from all choler and melancholy to flat madness, swearing and raging with a hunting oath or two, that in his own church where he hoped to have seen best order, he found most disorder." The rector attempted to appease him, alleging that he did not expect the visit of his lordship for a couple of hours, and begged him meanwhile to partake of some refreshment. Instead of adopting this sensible advice he rushed at the offending priest to strike him, but the latter adroitly avoided the blow, which Sir Thomas Jocelyn, who was standing by his side, received upon the ear, whereat, says Fox, he was somewhat astonished. After some further altercation the bishop continued his journey to Ware, some of his attendants remaining behind with the rector to enjoy the dinner which he had prepared.

10. PACK & CHAPMAN OF LONDON FECIT JAMES USBORNE
THOS NORTH CH. WARDENS 1771
(Diameter 49 in.)

In 1552 the "churche of Allhallowes in hartford" possessed :—

Itm v bells in the steeple

Itm ij hande bell^e*

The largest of these five bells was the gift of William Wake, gentleman, and was said to have been worth £120 at the time she was cast.† He was probably the William Wake, "lat surveyor with King Henry the sixt," whose tombstone in this church is mentioned by Chauncy.‡ In the year 1674, this great bell was melted down and cast into four, thus making a ring of eight bells with a priest's bell, the first of that number in the county.

So early as 1724, a complete peal (5,040 changes) of triples had been rung on these bells, and in 1767, as we have seen (page 89), the ringers constituted

* *Aug. Office : Misc.*, vol. 497, P. R. Off. † Chauncy's *Hist. Antiq. Herts*, p. 267.

‡ *Ibid.*, p. 260.

themselves a Society under the title of "The Hertford College Youths." To that Society the town is mainly indebted for the present ring. The old bells were probably far from being in good tune, so on the 15th October, 1770, we find an entry in the minute-book of the Ringers' Society to the effect (see page 92) that the parish had agreed, at their request, to have the two treble bells and the saint's bell recast into two treble bells, provided it was done by subscription and not by rate. Certain members of the Society subscribed £16, and there was received from non-members £8 8s. 9d. It was, however, wisely decided to recast the whole ring, and the work was done, as the bells themselves tell us, by the Whitechapel founders. The weights of these bells are :—

Present 3rd	6 cwt.	2 qrs.	22 lb.
4th	6 "	3 "	9 "
5th	7 "	2 "	9 "
6th	9 "	0 "	3 "
7th	10 "	2 "	0 "
8th	11 "	2 "	10 "
9th	15 "	0 "	19 "
Tenor	21 "	3 "	9 "

The note of the tenor is E flat, which, says a competent judge,* is probably the very best key-note that can be selected for a ring of eight or ten bells. These new bells were opened on the 20th of November, 1771.

The ringers soon became anxious to increase the strength of their bells, and on the 8th of January, 1789, showed their enthusiasm was practical by resolving to subscribe one half of the money arising from ringing, until it became the sum of £20, towards the metal, and all expence attending the erection of two additional trebles, so making a ring of ten. Their object was gained, as the present first and second bells testify, and the first peal on the completed ring of ten bells was rung on the 9th of June, 1794.

This good ring of bells which has been fortunate to escape injury for so many years, through the exertions of John Tasker Evans, Esq., M.D., was thoroughly repaired in 1879, and reopened by some good change-ringers on the 13th of November in that year.

8. JOHN BRIANT HARTFORD FECIT 1797
 GLORIA DEO IN EXCELSIS
 (Diameter 44½ in.)

In 1552, there were in the ancient church of St. Andrew “ij bellē,” also “a saunce bell.”* These had increased to “four small bells” before the year 1700,† which, in their turn, gave place to a ring of eight in 1782, upon which 5280 changes Treble Bob were rung on the 20th of May in that year, “being the first peal that was rung on the new bells.”‡

The tower of this church was rebuilt, and the bells rehung, in 1875-6.

Mr. Proctor, of Bennington, the well-known lover of ringing, speaking at a meeting of ringers at Hertford, in December, 1874, said these bells “had been cut and chipped about, were out of tune, and nothing could be done with them except recasting.”

ST. NICOLAS.

This ancient church, which formerly stood in St. Nicolas Street, possessed, in 1552, “a handbell w^t ij other bellē in the steple.”§

For stamps see p. 10.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Chauncy's Hist. Antiq. Herts*, p. 273.

In 1552 there were here "in the steple iiiij^{or} Belles,"* and that was the number in the year 1700.

There is a tradition that about forty years ago there were five bells, and that during some repairs of the church two were sent away to be recast, but were never restored, and are now supposed to be hanging in St. Albans Cathedral. That two bells have been lost is evident, as the pits for treble and tenor still remain, but there is nothing to confirm the St. Albans part of the tradition.

The bell-chamber is somewhat unsafe, except to an experienced hand and head. There is no flooring whatever, and the beams are quite rough and unsquared.

Formerly, on "Hockmonday," the Hockers here gave a portion of the money they collected to the churchwardens for the reparation of the church and bells.†

FECIT 1784

(Diameter 53 in. Note E β .)

In 1552 the "church of Hytchin" possessed the rather unusual number of
"vj great bell ϵ in the steple," which are thus minutely described in the
Inventory of goods then taken :—

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

The greateste Bell cont' in depth iij foot v Inches di in bredthe iiij foot fyve Inches. The second bell cont' in Depth iij foote ij Inches in bredth iiij foote one Inch ρ . The therde bell cont' in depth iij foote ij ynches and bredth iiij foote. The iiijth bell cont' in Depth ij foote ix ynches di in bredth iij foote v ynches Di'. The ffifthe cont' in depthe ij foote vj ynches in bredth iij foote one ynch Di'. The vj bell cont' in depthe ij foote iij Inches in bredth ij foote ix ynches di Itm̄ one Lytell Bell in the steple cont' in depth xvj ynches in bredth xvij ynches.*

The six "great bells" thus described were recast in the year 1689.† Whether the "Lytell" bell disappeared then or at an earlier date is doubtful. It was probably a Sanctus Bell. The number continued the same until 1762, when another recasting took place, and the number was increased to eight.

The Rev. John Pilkington Morgan (see 3rd bell) was instituted as Vicar on the 18th of August, 1755, and died on the 16th of July, 1788, aged 72 years, being buried within this church.‡ The name "Rev. W. T. Morgan" on the tenor bell dated 1784 is consequently either an error, or represents perhaps a curate of that name.

There was a Peal Board in the old ringing loft, which was removed when the church was restored, recording the ringing of "a compleat Peal of 5040 Plain Bob Trippl'es" by eight ringers, whose names were given, on Wednesday 20th February, 1782.

Cussans (vol. ii., p. 40) mentions the seizure by the Parliament, in 1650, of this manor, and quotes a detailed account thereof, which includes an "old decayed small Tenem^t com̄only called the Bell house . . . neare unto the Marquett Place . . . used for ringinge of y^e Bell there for the Marquett." I believe this is now untraceable, as is also the fate of the bell which it once contained.

This new church has two small bells supplied by Messrs. Taylor and Co. of Loughborough. The diameters were 12 inches and 13 inches. They were the gift of the Rev. W. Courthwaite.

HODDESDON.

? Dedication

1 Bell.

This new church—the district was formed in 1843—has one modern bell not easy of access.

CLOCK TOWER

1 Clock Bell and 2 Quarter Bells.

The ancient bell described below formerly belonged to the chapel of St. Catharine, which, becoming ruinous, was demolished, excepting the portion called the Clock House, which was rebuilt, about the year 1730, at the expence of Robert Plomer, of this place, gentleman.

The present Town Hall and Clock House were completed about the year 1870, when a new town clock and two quarter bells were provided. The clock strikes upon the ancient bell.

Clock Bell :

+ (Fig. 19.) *Sancta Anna Ora Pro Nobis* ☩ ∪ (Fig. 31.)

Quarter Bells :

These two bells were cast by Messrs. Gillett and Co., of Croydon, in 1870, and weigh respectively 1 cwt. and 1 cwt. 2 qrs.

The manor of Hormead Magna was purchased, in 1579, by Anthony Cage of London. From him descended Robert Cage, who was, says Chauncy, "very serviceable to his country, well-beloved among his neighbours, and obtained a Ring of six excellent Bells in this church, but dying [in 1655] in the flower of his age, left Thornton his Heir."*

There is a story current in the parish to the effect that when the tenor bell was being cast, "a lady emptied her lap which was full of silver into the mould," hence its beautiful tone.

HORMEAD, LITTLE.

3. THE REV^d W CALVERT RECTOR J BRIANT HARTFORD 1787
(Diameter 35½ in.)
4. PHILIP ELIOT RECTOR JOSEPH CALTON JOHN HUNSDON
CHURCHWARDEN 1668 A O B.
(Diameter 38 in.)
5. I C ANTHONY BARTLET MADE ME 1652
(Diameter 43½ in.)

In 1552 this church possessed :—

Itm̄ v bells in the steple

Itm̄ a saunce bell

Itm̄ a hand bell

Itm̄ a clocke w^t all Implemente thereto belongynge.*

The initials I C on the tenor bell are probably those of John. Clifton who had some connection with the Whitechapel Foundry. See p. 47.

The Rev. Philip Elliott (see 4th bell) was instituted as rector on the 20th July, 1644.

The Rev. Wm. Calvert (see 3rd bell) was instituted on the 10th May, 1777, and died on 10th December, 1831, in the 86th year of his age.†

There is a tradition that the Eastwick bells fell, and not being rehung, the Hunsdon people claimed one, which is said to be the treble at present in this tower. The Edwardian Inventory, which gives five bells in 1552 as now, and the fact of the treble being cast by the same founder, and in the same year as the 2nd bell, appear to disprove the truth of the tradition.

(WEST) HYDE.

ST. THOMAS

1 Bell.

This modern district church has a small bell, said to have been supplied by Messrs. Warner & Sons, of the Crescent Foundry, London.

5. WILLIAM WYANT. CHVRCH. WARDEN THOMAS RVSSELL
OF WOOTTON MADE ME 1726

(Diameter 39 in.)

In 1552 there were here "iij bellē in the steeple."*

Chauncy, writing in the year 1700, says "five bells."† Two of them are traditionally believed to have been removed to Pirton, which parish, with this, was formerly one cure. In 1857 the two memorial bells were given, thus making up the number to what it was before the removal took place.

Frederick Cockayne Dudley Ryder (see 6th bell) was born in October, 1841, and died on the 27th of May, 1853. He was the eldest son of the Hon. Fredeickr Dudley Ryder by Marian Charlotte Emily, only daughter and heiress of Thomas Cockayne, Esq., of Ickleford House. This Thomas Cockayne (see 2nd bell) died on the 26th of May, 1852, being the last heir

* *Aug. Office: Misc.*, vol. 497, P. R. Off.† *Hist. Antiq. Herts.*, p. 401.

male of the branch of Cockayne settled at Cockayne, Hatley, Bedfordshire, an estate now belonging to the Custs, who inherit it under the will of a Samuel Cockayne who died in 1746, and whose mother was a Cust.

ST. VINCENT

1 Bell.

1. + (Fig. 36.) N R W I T Z D O Y ☼ I i h s
(Diameter 34½ in.)

For stamps see p. 36.

In 1552 "the Paryshe Church off Nunam" possessed "iij Belles in the steple";* and that was the number in 1700.† There are frames for that number now: the missing ones were sent away within the memory of the present parish clerk, and, most probably, were sold to pay for repairs.

NORTHAW.

ST. THOMAS OF CANTERBURY

6 Bells.

In 1552 there were here "iij Belles in the steple and a saunce bell," also "a hand bell."‡

* *Aug. Office: Misc.*, vol. 497, P. R. Off. † *Chauncy's Hist. Antiq. Herts.*, p. 521.

‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.

These bells, or two of them, had disappeared before the year 1700, for Chauncy says there was then one bell only.* That single bell apparently passed from the old church, taken down in 1808, into the new one, built by Mr. Wm. Strode in 1810, and was continued in the church at its renovation in 1879. It is described by Mr. Cussans as being "apparently pre-Reformation, but the inscription around it has been filed off."† This single bell, probably one of the three mentioned in the Edwardian Inventory, was melted and lost in the fire which almost entirely destroyed the church on Sunday the 20th February, 1881.

The present church was consecrated on the 28th September, 1882, and has since been furnished with a ring of six bells from Taylor's, of Loughborough, the tenor of which weighs 13 cwt. The peal is in the key of G.

In 1297, according to an interesting Inventory (now preserved in the Library of St. Paul's Cathedral) of the furniture then belonging to this church, there was "a suitable bell tower with two bells furnished with the necessary

* See Cussans' *Hist. of Herts*, i., p. 142. † *Aug. Office: Misc.*, vol. 497, P. R. Off.

ropes." We also find from the same document that there were "Two hand bells" belonging, apparently, to "Four altars," then in the nave of the church, and other "Two small hand bells," belonging, apparently, to "a suitable High Altar."*

In 1552 the two bells of 1297 had increased to "iiij belles in the steple;"† they, again, had given place to "a small ring of five indifferent bells," as Chauncy describes them, prior to the year 1700,‡ which ring was augmented to six in 1875, through the instrumentality of the Rev. Woolmer Wigram, a great lover of bells and their music, who was at that time rector of this parish. In the ringing chamber are a series of tablets, with appropriate verses on each: the first may be quoted:—

Ever the same yet ever new,
 Changed and yet true,
 Like the pure heaven's unfailling blue
 Which varies on from hour to hour,
 Yet of the same high love and power
 Tells alway: such may seem
 Through life, or waking or in dream,
 The echoing bells.

§ Not 18, as stated on p. 19.

¶ *Aug. Office: Misc.*, vol. 497, P. R. Off

and injured by lightning, two bells were sold to provide funds for the necessary repairs. Three bells were here in the year 1700,* but they had disappeared long before the restoration of the church in the year 1864.

The curious inscription on the single remaining bell implies that it had been recast, and so had obtained anew the power, according to mediæval belief, to drive away evil spirits, etc.

On a board in the ringing chamber are the following lines :—

All that intend to take these ropes in hand
 To ring, mark well these lines and understand,
 Which, if with care you read, will plainly see
 What fines and forfeits are the sexton's fee.
 He that doth break a stay or turn a bell,
 The forfeit is a groat, it's known full well :
 And carelessly to ring with spur or hat
 The forfeit is a groat, beware of that.
 And they that fight or quarrell, swear or curse,
 Must pay two pots, turn out, or else do worse.
 And for unlocking the steeple door,
 And for the sweeping of the bellfry floor,
 And to buy oil, you know it's very dear,
 And for my attendance here,
 If you will observe such rules as these
 You're welcome for to ring here when you please.

Pray remember the Sexton,

Jos. Brown, May, 1764.

There are also recent rules for the governance of the ringers.

In this village there was in pre-Reformation times a cell of a prior and a few Benedictine monks from St. Albans, dedicated to St. Amphibalus : it is related of Abbot Thomas (A.D. 1349-96) that at the time when he was staying here he frequently—almost daily—was accustomed to rise before matins, waking no one, disturbing no one until it was time for ringing to matins, spending sometimes two or three hours in devotion. When the time to ring for matins arrived, if there was no one present who could ring, he used himself to ring the bell with his own hand. So he did at vespers : when he had meditated on the Psalter as much as seemed good, he rang the bell, or caused it to be rung.*

WOOD THO. SORRILL CH WARDENS
(Diameter 40½ in.)

In 1552 there were "iij bellē in the steple,"* which in 1700 were represented by "a small ring of five bells;"† these gave way to a ring of six, with a tenor weighing 12 cwt. in 1739.

Hale Wortham (see 1st bell), a member of a family long established here, died on the 18th of July, 1755, aged 72 years.‡

There was formerly a board in the belfry on which were written, says one of the present ringers, the following lines:—

All you that do intend to ring
Mark well these lines
Behold you undertake a dangerous thing
Therefore be not too bold.
For if a bell you chance to turn as very like you may
Then three pence to the clerk I'll tell
And needs you must it pay.
But if pulled back then four pence is the sum
Serve God and honour the King
Here these lines are writ and done
Therefore I am your humble servant
Thomas Lawman of Royston.

5. ADOLPHUS MEETKIRK ESQ^R BENEFACTOR. J. MALES
CHURCHWARDEN J. BRIANT HARTFORD FECIT 1787.

(Diameter $33\frac{1}{2}$ in.)

In 1552 there were "iiij bellē in the steple."* That continued the number until 1787, when they were recast, and an additional bell was given by Mr. Meetkirk. He (a descendant of Sir Adolphus Meetkirk, who was born at Bruges in 1528) was born in 1753, and died in 1841. Mr. Cussans gives a pedigree and an account of the family in his *History of Herts*, vol. i., p. 167.

The tenor bell weighs, according to the founder's list, 7 cwt.

There is a tradition current here that these bells and those of Ardeley, being cast at the same time by the same founder, an exchange was accidentally made by him, he sending the Ardeley bells here, and those belonging to this parish to Ardeley. The present bells at Ardeley, however, prove such was not the case.

In 1552 the church of "Saint Peters in the towne of Saynt Albones" possessed :—

Imprimis iiij^{or} Belles and a sance Bell in the Steple.*

In 1700, there were, according to Chauncy, six bells,† five of which being broken in 1728, they were recast, and two additional ones added in the following year (1729). On the 27th of December in that year, "a compleat Peal of 5040 changes in the method of Bob Major" was rung on the new bells

* *Aug. Office : Misc.*, vol. 497, P. R. Off.

† *Hist. Antiq. Herts*, p. 472.

by members of the Society of College Youths from London, that being, it was said, the "first whole Peal that hath been rung in the County of Hertford."

In 1787 the present 1st and 2nd bells were added, making a ring of ten; and in 1868 (to quote an inscription from a board in the belfry) "John Lewis of this Parish, Nonconformist, added two Bells to complete the peal of twelve," for which number cages were prepared by John Briant when the tower was rebuilt in 1805. The augmented ring was opened on the 19th of May, 1868, by a joint company of College, Cumberland, St. Albans and Bennington ringers. The donor of these two treble bells died a few days after that date, namely, on the 27th of the same month.

On the evening of the 12th October, 1881, the eleventh bell of the ring of twelve was accidentally cracked, and immediately afterwards the then tenth was found to be in a similar condition. They were both removed to the Loughborough foundry to be recast, and the two trebles given by Mr. Lewis in 1868 were also removed, and handed over to the founders in part payment for the recasting of the two cracked bells. Although those two small bells were said to be of no use in the ring, it was perhaps a pity to reduce the number of bells; the addition of a new treble and a new tenor would have made a very fair ring of twelve.

The two bells given by Mr. Lewis, and now lost, were inscribed:—

Cast by John Warner & Sons London 1868

Royal ∪ *Arms*

Patent

(Diameters 26, 27½ in.)

The 10th and 11th of the ring of twelve, now represented by the 8th and 9th of the present ring of ten, were inscribed:—

R. Phelps fecit 1729

(Diameters 39½, 44 in.)

The present ring was, after the alterations just noted, opened on the 22nd of June, 1883, by Leonard Proctor, Esq., and a band of ringers.

The Rev. Robert Rumney (see 3rd bell) was instituted as vicar on the 17th of May, 1715; he died on the 10th December, 1743, aged 58 years.

The Rev. A. W. Roberts (see 7th bell) was instituted on the 24th of April, 1801.

Here are several peal-boards, dating from 1729 to 1870.

In 1552 "the Paryshe Church of Saint Stevynns" possessed "iiij^{or} Belles in the steeple."^{*}

It appears from the Parish Books that these four bells remained until 1803, when they were cast into six as above: the following entries are quoted:—

1742	Nov. 6	Pd for 4 new bell Ropes 30 lb. 8 oz.	... 01 10 00
	Mar. 13	Pd for 3 Ringing days	... 01 00 00
1747	April 7	Pd for a sett of Bell ropes 30 pound w ^t	... 01 10 00
1749	April 14	for beer w ⁿ getting the Bell up	... 00 01 06

[Payments annually for "Ringing-days."]

On the 6th of June, 1803, a vestry was held to take into consideration the state of the Bells and of the tower, when an adjournment took place until the following Monday, in order that Mr. Mears, the bell-founder, might be present "to answer such questions as may be thought necessary to propose to him."

"June 13, 1803. At a vestry held this day . . . It was the unanimous opinion of this vestry that the metal of the bells computed to weigh 39 cwt. should be cast into six Bells, the Tenor to weigh 10 cwt., according to an estimate delivered by Mr. Mears, Bellfounder in White-chapel, London, the expence of which, with the framework to be compleat, will amount to £139 2s., according to the said estimate exclusive of carriage. The carpenters work for repairing the floor and other parts of the Tower, and some other necessary repairs to the church, according to an estimate delivered by Benjn. Anderson, will amount to £40 4s. 5d., the whole of which was agreed to unanimously, and that, on a future day, notice shall be given to make a Rate to defray the afore-said expences. And Mr. Mears is hereby ordered to proceed in the business forthwith."

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

In accordance with this Resolution the repairs were carried out, and the four old bells, which were found to weigh 40 cwt. 3 qr. 11 lb., were recast into the present six, which weigh 40 cwt. 2 qr. 15 lb.

[Many charges for ringing on joyous occasions.]

The ringing of the bells of this church was the cause of a serious contention during the rule of John III. (v. p. 103), Abbot of St. Albans (A.D. 1290-1301): the chronicler relates that Robert de Wynchilse, Archbishop of Canterbury, sent word that he wished to lodge in the Abbey. The abbot, fearing prejudice in future (no Archbishop or Bishop was to claim lodging in the abbey without the special invitation of the abbot) sent two monks with a letter, drawn out in a certain form, for the Archbishop to sign, which he declining to do, lodgings were taken for him by his marshall in the town. Upon the approach of the Archbishop he, because the sacrist of St. Stephen's did not ring for him, placed this church *de facto*, though not, says the chronicler, of ecclesiastical right—it being in the jurisdiction of the abbot and convent—under interdict. Notwithstanding this “they rang, celebrated, and did all things which they ought.” On the morrow, the Archbishop, thus set at defiance, uttering threats, indignantly went away.*

CLOCK TOWER

2 Bells.

1. + (Fig. 34.) **M**issi **D**e **C**elis **H**abeo **D**omen **G**abrielis +
(Diameter 47 in.)

* *Gesta Abb. Mon. S. Albani* (Rolls Series) ii. 47.

2. THOS ROBINS MAYOR OF ST. ALBANS 1729
(Diameter $14\frac{3}{4}$ in.)

For stamps see p. 28.

It appears from original deeds preserved among the archives of the Corporation that this clock tower—called in the Corporation records “le clockhouse”—was erected and appropriated to its present use between the years 1402 and 1427. It stands as a detached campanile in the market-place, and has no connection with any ecclesiastical building. In a deed, dated the 29th of June, in the 4th year of King Henry IV., A.D. 1402, Alicia, the relict of Ralph atte Ley conveys to Geoffrey Fyllynder and others all her right in *unâ vacuâ placeâ terre jacente in villa de Sancto Albano in vico francorum aliter dicto Cordwaneres rowe, que continet in latitudine octo decem pedes, in longitudine triginta et octo pedes*; and in a subsequent deed dated in the fifth year of Henry VI., A.D. 1427, Thomas Woldeye conveys to Henry Fouchere and others *unum tenementum vocatum le Clockhouse cum unâ vacuâ placeâ adjacente situatâ in villa predicta in vico vocato Cordwaneres rowe, et predictum tenementum et vacua placea continent in latitudine octo decem pedes in longitudine triginta et duo pedes*.*

There are two other deeds from which Mr. R. R. Lloyd has kindly made extracts for me; they give the “use” of the bell at that date. The first is a lease of the clock-house, dated 1490, to John Newberry and others, by which the tenant covenants to “kepe and rewle the clock being in the said tenement and to smyte and kepe his reasonable hours and daily and nightly to ryng or do ryng the bell of the same clock by the space of half a myle wey betwene the hours of viij and ix of the same clock at afterþnoone And immediatly as he can or may after† the houre of iiij of the same clock be fore noone.” The tenant further covenanted to keep all in repair except the bell and clapper, stonework and lead work and not to erect a smith’s forge.

It is evident from these provisions that the bell was to be rung at four o’clock in the morning and between eight and nine o’clock in the evening; and it was to be rung for the time occupied in walking half a mile. This curious mode of measuring time occurs in the Statutes, dated 29th September, 1839, which Bishop Grandison settled for the government of his collegiate establishment at Ottery St. Mary. It, however, there being in mediæval Latin—“ . . . et facto bono intervallo quasi dimidii miliarii pulsetur cum

* Clutterbuck’s *Herts*, i., p. 56, note.

† This word is misread by Clutterbuck.

eadem campana per dimidium miliarii et cessetur et iterum," etc.—has puzzled many scholars.* The use of it here in English 150 years subsequently gives the required explanation.

The second document, describing the former "use" of this bell, is an Indenture of Lease, dated in the 1st year of Edward VI., in which it is provided "and also the said bell to be Tolloed when any casualtie of ffyer or ffray made wthin the said Towne yf he [the lessee] be thereunto required."

There was another lease granted on the 18th Novr., 1594, to Robert Wolley, for twenty-one years, at the yearly rent of £20, he bearing the charge of ringing the town bell and keeping the clock in repair: several other leases have, of course, subsequently been granted subject to the like conditions, which have, however, of late years been omitted, the bell being never rung now.†

The smaller bell, cast during the mayoralty of Mr. Thomas Robins, hung in the old Market House, in the Market Place, until the year 1865, and was known as the Market Bell. There is no remembrance, even by an old inhabitant, aged 90 years, of its being used in any way, but it is supposed to have been used rather as an alarm than a market bell. In the year 1865 it was removed to its present position in the clock-tower, then recently repaired, and there hung to be used as a fire-bell, should occasion arise.

* Mr. Ellacombe's *Bells of the Church*, p. 362.

† The bell known as "Old Gabriel" in the Market Tower at Lewes has an inscription intended for the same as that on the bell here: in both cases the use of the bell for the *Angelus* is clearly indicated.

In 1552 the "churche of Hipollett" possessed "iij bellē in the steple."*

The sexton here says there is no one in the village who can raise the bells; he cannot do so himself, nor could his predecessor who used to go up into the bell-chamber and strike the largest bell with a hammer; it was probably owing to this usage that a piece has been broken off.

SANDON.

ALL SAINTS

5 Bells.

1. JOHN WAYLETT
(Diameter 26 in.)
2. JOHN WAYLETT FECIT 1721
(Diameter 29½ in.)
3. JOHN WAYLETT LONDON FECIT 1728
(Diameter 31½ in.)
4. JOHN WAYLETT MADE ME 1709
(Diameter 33 in.)
5. MILES GRAYE MADE ME 1624
(Diameter 37 in.)

In 1552 there were here:—

It̃m̃ in the Steple iij^{or} bellē

It̃m̃ a saunce bell

It̃m̃ ij^o hande bellē.†

Four appears to have remained the number until early in the eighteenth century, when it was increased to five as at present, or, according to a local tradition, to six.

SANDRIDGE.

ST. LEONARD

2 Bells.

1. THOMAS MEARS FOUNDER LONDON 1837.
(Diameter 23 in.)
2. THOMAS MEARS FOUNDER LONDON 1837. THOMAS
OAKLEY, GEORGE YOUNG CHURCHWARDENS 1837
(Diameters 24 in.)

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Ibid.*

In 1552 the church of "Sandrudge alias Sandrydge" had "iij Belles in the steple," and "a handbell weinge iijli."*

About the year 1688 the tower fell and lay in ruin for many years. Tradition says that when this occurred the bells were placed outside the church-yard in Petticoat Lane, and that the Hatfield folk carried off one or more. Another rumour is that one bell was sold to Wheathampstead. In any case one bell was lost to the church, for in the memory of a man now living there were two bells only, one large bell being hung in a closed space at the west end of the north aisle, and another in a canopy near the west end of the ridge of the roof. This last mentioned bell fell about fifty years ago when its crown was much broken: it was, however, rivetted and replaced. These two bells remained, as stated, until the year 1837 when they were recast into the existing pair.

SARRATT.

HOLY CROSS

3 Bells.

1. MEARS & STAINBANK FOUNDERS LONDON 1865
(Diameter 27 in.)
2. + Henry Knight Made Me in 1606
(Diameter 29 in.)
3. CHANDLER MADE ME 1719
(Diameter 31 in.)

In 1552 there were here "iij Belles in the steple" and "ij handbell^c one Sacringe Bell and a crismatory of lattine."†

Some years ago, before the institution of the present rector, one of the three bells then hanging here was taken down as cracked and broken up. When the church was restored in 1865-6, the rector added the present treble to make up the ancient number.

SAWBRIDGEWORTH.

ST. MARY

8 Bells and a Clock Bell.

1. J. TAYLOR & CO. FOUNDERS LOUGHBOROUGH 1871. S. P. FIELD, VICAR.

(Diameter 46 in.)
8. STATUTEM EST OMNIBUS SEMEL MORI. THE REV^d JOHN
LANE VICAR RICH^d ALGER & SAM. GORROD C: W.
JOHN BRIANT HERTFORD FECIT 1795
(Diameter 52 in.)
- Clock Bell*:— 1664
(Diameter 15 in.)

In 1552 there were here:—

Itm̄ v belles in the steple

Itm̄ a saunce bell and ij^o hand belles.

This church also then possessed:—

A pyx of syl^ū and gylt w^t a glasse in yt and ij lytle bell^e of
syl^ū hangynge thereat wayes all togythers xxxij ownc^e dī.*

This “deep ring of five bells,” as Chauncy describes it in the year 1700, was increased to six in the eighteenth century, when several of the ancient bells were recast. In 1869 they were inscribed:—

1. (The present 3rd).

2. R Phelps fecit 1728. The Revd. E. Dubourdiou Vicar: Saml
Petchey: Richard King Churchwardens.

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

3. Stella Maria socurre piisima nobis.
4. Richard Phelps of London made me 1733 George Holmden,
Nathaniel Norris Churchwardens.
5. In multis annis resonet campana Johannis Johannes Tonne me
fecit
6. (The present 8th.)

In 1870 the 2nd, 3rd, 4th and 5th of these bells were recast, and two trebles were shortly afterwards added by Messrs. Taylor & Sons of Loughborough. The whole being new hung by that firm, the complete ring of eight was opened by Leonard Proctor, Esq., of Bennington, and his company of ringers on the 11th of April, 1871 [N.B. The date 1872 on the 2nd bell is an error for 1871], when several "Touches" were rung by them.

The following letter from Richard Phelps, the founder, together with the statement of account and receipt, are preserved in the church chest:—

(1.)

London, 7ber 24th, 1728.

Messrs. Saml. Petchey and Richd. King,
Gentlemen,

I have herewith sent y^e two bells w^{ch} I hope will be agreeable to y^e others I desire that they may not be hung to short and that the old Clapper may be fitted to strike y^e 2^d bell on the place I have marked wth a small stroke wth a Chisell I mean that it do not strike higher or lower on y^e bell and pray when they are rung give me or Line or 2 to know if they are Liked.

I am y^r most oblidged humble s^{vt}

RICH^d PHELPS.

(2.)

full payment of all Demands

Richd Phelp.*

The Revd. John Lane (see 8th bell) was instituted as Vicar on the 3rd
October, 1787, and died in 1817.

The Rev. S. Pryer Field (see treble bell), the present Vicar, was instituted
on the 20th of January, 1864.

Mr. Cussans tells us (*Hist. Herts*, i. p. 84) there was formerly some land
called "Bell Mead" belonging to the parish, which may have been for the
benefit of the bells, but it is now lost.

The Sawbridgeworth Company of Ringers have some excellent rules for
their guidance and for the care of the bells.

SHENLEY.

ST. BOTOLPH

3 Bells.

1. THE REV^D: PHILIP FALL D: D: RECTOR DANIEL MELBURN
MOSES WOODYER CH: W: 1730
R: P: FECIT
(Diameter 27 in.)
2. GOD BE MY GOODE SPEED 1616
[T B]
(Diameter 29 in.)
3. PRAISE THE LORD 1633 ∩ (Fig. 38.)
(Diameter 32 in.)

For stamps see p. 38.

In 1552 there were here "iij Belles in the steple."†

The Rev. Philip Falle (see 1st bell) was instituted as rector on the 5th of
January, 1698-9, and died here, aged 86, in 1742.‡

Nos. 1 and 2 are both from the Whitechapel Foundry. "R P" stands for
Richard Phelps; "T B" on the 2nd stands for Thomas Bartlett, probably at
the time foreman to William Carter, who had the foundry in 1616. See p. 45.

* For these extracts I am indebted to the Vicar and the Rev. W. J. Webber Jones.

† *Aug. Office: Misc.*, vol. 497, P. R. Off.

6. ANTHONY NATT VICAR. WILLIAM BIGG & WILLIAM KNIGHT
CHURCHWARDENS 1778 PACK & CHAPMAN OF LONDON
FECIT
(Diameter 45 in.)

In 1552 there were “in the steple fyve bells and a saunce bell,”† and that continued the number until the year 1843, when the ring was augmented to six.

The previous bell to the 3rd cast in 1868 is said to have borne an inscription showing it to have been from the foundry of Newman of Cambridge.

Ralph Sadler (see 2nd and 4th bells) was descended from Sir Ralph Sadleir or Sadler, to whom Henry VIII. granted this manor and the advowson of the church. He died in 1660, without issue, when the estates passed to Walter Lord Aston, who had married Gertrude, the sister of the donor of the bells.‡

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Ibid.*

‡ For pedigree see Clutterbuck's *Hist. Herts.*, iii., 229; see also Chauncy's *Hist. Antiq. Herts.*, pp. 218-223; and Cussans' *Hist. Herts.*, i., pp. 169-171.

The vicar mentioned on the tenor bell was instituted on the 3rd April, 1747, and died in 1782.

There is a Ringing Society—which is guided by some useful rules—established here in 1868.

STANSTEAD ABBOTS.

5. C. W. N. A. CHURCHWARDENS A. C. 1673.
(Diameter 37½ in.)

In 1552 "the paryshe church of Teweng" possessed:—

Itm̄ iij bells hangeng in the steple

Itm̄ a Saunctus belle and ij hand bell^e.*

These were undoubtedly recast into five bells in 1673, as Chauncy states there were that number in the year 1700.

THERFIELD.

ST. MARY

6 Bells.

1. WILLIAM AND PHILIP WIGHTMAN MADE ME 1689 DOMIN.
GUL. HOLDER DD
2. MILES GRAYE MADE ME 1626
3. MILES GRAIE 1656
4. JOHN DIER MADE ME 1597
5. PRAISES THE LORD 1608
6. J. WAYLETT FECIT 1707 RALPH FORDHAM; ED: PEPPERCORN
C.W.

In 1552 there were here "iiij bell^e and a saunce bell."† Some time prior to 1689 another bell had been added, making a ring of five. In that year much work was done to the bells; they were rehung and augmented to a ring of six, with a new saints' bell. All this is well told in the following entry in the parish register. It should be borne in mind that the advowson belonged then, as now, to the Dean and Chapter of St. Paul's, London:—

Dr. Turner, then L^d. Bishop of Ely, did in the year 1689 give the new hanging of one bell at his charge of six pounds. Dr. Edward Stillingfleet, then Dean of Paul's and now Lord Bishop of Worcester, and Dr. John Tillotson, then Residentiary of St. Paul's, now L^d. Archbishop of Canterbury, did each give the new hanging of a Bell at

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Ibid.*

the like expence. Dr. William Holder, Rector of this church, at the same time gave the new Hanging of two Bells which remained of the five old ones. Dr. Holder also gave a Treble Bell to compleat the Ring and hanged it at his own charge and likewise a new St's Bell and hung it.

Chauncy, describing the church in the year 1700, says the saint's bell then hung in "a turret upon the Tower:"* when it disappeared is not known; old people say it was there about seventy years ago.

The Revd. Wm. Holder, the donor mentioned above, was instituted on the 25th of May, 1687, and died in 1697.†

The ancient church was taken down in 1873, and a new one, without a tower, built; the bells (when my friend Mr. Webber Jones inspected them for me) in 1881 were, with one exception, on the floor of a temporary shed: hence their imperfect description.

The treble bell is cracked.

February, 1885.—Bells in same condition, so the rector kindly intimates.

THORLEY.

ST. JAMES

(Diameter 46 in.)

8. CHANDLER MADE ME 1695

(Diameter 51 in.)

In 1552 there were here "v belles in the Steple wth a Saunce Bell."‡ These had been increased to "a good ring of six," prior to the year 1700.§ In 1881, the bell frame being considered unsafe, and the bells having only been chimed for some time, it was determined to have them rehung. Accordingly on the 24th of October in that year, they, as they then hung, were

* *Aug. Office: Misc.*, vol. 497, P. R. Off.

† *Chauncy's Hist. Antiq. Herts.*, p. 305.

‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.

§ *Chauncy's Hist. Antiq. Herts.*, p. 595.

chimed for the last time, and on the following day the ropes were removed and preparations made for lowering the bells into the ringing chamber, where they remained until new frames were prepared, and their two new companions (the present 1st and 2nd) were cast by Messrs. Gillett and Bland, of Croydon. The augmented ring of eight was opened on the 1st of April, 1882.

There is a note in the ringing chamber that "the big bell was cast at Drayton Paslow, 1695."

The inscription on the 3rd bell most probably means that its predecessor was recast with additional metal; which "on part" was paid for by the donations of "many men." These last words have, more than once, been read and printed as "manx men," to the great bewilderment of the parishioners.

WADESMILL.

4 Bells.

1. + (Fig. 19.) **Johannes Est Nomen Eius** □ (Fig. 21.)
 ∪ (Fig. 20a).
 (Diameter 27½ in.)
2. +
 ∪ (Figs. 38 and 39.) **JESVS BE OVR SPEDE** 1623
 (Diameter 29 in.)
3. +
 ∪ (Figs. 38 and 39.) **PRAISE THE LORD** 1631
 (Diameter 32 in.)
4. **John & dier & made & me** 1580
 (Diameter 34½ in.)

This modern church was built in the year 1853 to supersede the church of Thundridge, which is inconveniently placed for the parishioners: the above four bells were then brought from the old church to this new one.

WALDEN ST. PAUL'S.

ALL SAINTS

5 Bells.

REV^D HENRY CODDINGTON M.A. VICAR

JOSHUA PAGE JUNIOR

EDWARD HALE

JOHN NATHANIEL HUMFREY

} CHURCH
 WARDENS

(Diameter 50½ in.)

In 1552 there were here :—

It fyve great belles

It one lytle belle to calle for ye priste Clarke or sexten when they
 arre absent.*

These five bells, apparently, survived until some of them, if not all, were recast by R. Phelps in 1731; for Chauncy, describing the church in 1700, says it then possessed "a deep ring of five bells."†

There are chimes, first placed in 1777, which play every three hours. They were repaired and the bells rehung in 1877.

A close of charity land, measuring about four acres, is known as "Bell close": probably originally given for the benefit of the bells.

The Rev. Henry Coddington (see tenor bell) was instituted on the 21st of December, 1832; he died in 1845.‡

Priest's Bell :—

1705

In 1552 there were here “v Belles in the steeple and one m'ket bell.”*

In 1700 Chauncy said “six bells”†—perhaps the Edwardian ones—which were soon after recast into a ring of eight, all of which, with one exception, remain.

In the reign of James I. a water corn-mill with lands which produced about £30 a year were given for a sermon to be preached in this church every

* *Aug. Office : Misc.*, vol. 497, P. R. Off.

† *Hist. Antiq. Herts.*, p. 486.

Tuesday morning before the market-bell rang.* There is now no market-bell and the weekly lecture has been recently discontinued.

There are a set of chimes: upon a brass plate connected with them is inscribed:—

G Harman
High Wycombe fecit
John Dummer } Ch. Wardens
John Shackell } 1786
Wm. Hartey Senr. }

They play at 3, 6, 9 and 12 o'clock: the four tunes are:—

The scolding woman
The Hymn of Eve
113th Psalm
The Woodlands.

The tune is changed twice a week: on each occasion it is played through four times.

There are several Peal Boards showing that change-ringing was well practised by "The Society of Watford Youths." The dates are 30th April, 1780; 11th December, 1805; 10th November, 1814; 5th December, 1819; 6th January, 1824. There is also a record of the ringing of "a compleat Peal of 5280 Oxford Treble Bob" by the Society of College Youths on Sunday, the 24th of April, 1790.

1 Bell and a Priest's Bell.

1. PROSPERITY TO THE ESTABLISHED CHURCH OF ENGLAND.
NO ENCOURAGEMENT TO ENTUSIASM. ROB^T MUNDAY
C. W. 1760. JOS. EAYRE S^T. NEOTS FECIT

(Diameter 32½ in.)

Priest's Bell:—

Blank.

(Diameter 13 in.)

In 1552 there were here "iiij bells in the steple" and "a sanse bell."‡

In 1700 the tower, in which was a ring of five bells, had recently fallen.§

* *Aug. Office: Misc.*, vol. 497, P. R. Off.† *Hist. Antiq. Herts*, p. 334.‡ *Aug. Office: Misc.*, vol. 497, P. R. Off.§ *Hist. Antiq. Herts*, p. 319.

Whether the bells themselves were then disabled, or whether, as tradition says, they were shortly after sought to be got rid of because the ringing disturbed the occupants of the neighbouring houses, is uncertain, but the following entry in the Parish Book relates to their sale :—

July 17th 1746.

Ordered that the Bells be sold to the best bidder, in Order to Raise Money to Erect a Turret or some other conveniency for the hanging up of a Large Bell and the Sance Bell.

That this order was carried out is apparent from another entry :—

October 7th 1747.

Ordered that the Churchwardens pay Five Pounds towards the finishing the Turret over and above the Money that is in Mr. Peirseys hands, and that the Turret be finished without any further expense to the Parish.*

- The Turret alluded to in these entries was replaced in the year 1834 by the present brick tower.

A bell with a similar inscription (only properly spelled) to that on the bell here hangs at Little Wymondley.

* Kindly supplied by the Rev. C. L. Wingfield, rector of the parish

In 1552 there were here :—

Itm̄ iiij^{or} belles in the steeple

Itm̄ a saunce bell.*

There were still “four bells” when Chauncy described the church at the close of the seventeenth century;† shortly after which the number was increased to eight “by the bounty and procurement” says Salmon,‡ “of Mr. Auncell of this parish, who “is a great lover of Ringing.” Of that gentleman little is now known; he is supposed to have been the resident owner of a small estate now absorbed in the property of Coles Park, of which the proprietor is Robert Phillips Greg, Esq. The frames for the eight bells still remain: there is a discrepancy in the traditions about the loss of three of these bells; the truth, however, appears to be that they were sold by the churchwardens for the repairs of the church about fifty years ago, the treble being recast at the same time.

THE END.

In 4to., cloth, profusely Illustrated, to Subscribers, price 12s. 6d.

THE
Church Bells of Bedfordshire:

THEIR FOUNDERS, INSCRIPTIONS, TRADITIONS, AND
PECULIAR USES.

By the late THOMAS NORTH, F.S.A.

"He did his work with characteristic enthusiasm."—*Athenæum*.

"A thorough piece of work."—*Notes and Queries*.

*Tastefully printed in fcap. 4to., price 21s., with numerous Plates and Woodcut
Illustrations, and handsomely bound in cloth.*

Surrey Bells and London
Bell-founders.

A Contribution to the Comparative Study of Bell Inscriptions.

By J. C. L. STAHLSCHMIDT,

PAST MASTER OF THE WORSHIPFUL COMPANY OF FOUNDERS, MEMBER OF
THE ROYAL ARCHÆOLOGICAL INSTITUTE, AND OF THE SURREY
ARCHÆOLOGICAL SOCIETY.

"Much that is original, interesting, and curious. Hardly a dull page in the book."

Saturday Review.

"The sequence of metropolitan bell-founders is an amazing 'find.'"—*Athenæum*.

"Bears upon almost every page evidence of deep research."—*City Press*.

"Campanists will be delighted with Mr. Stahl Schmidt's laborious and scholarly work."

Surrey Comet.

"In substance and accuracy and in the delicacy of its illustrations, it deserves high praise."

Literary World.

"Its recognition among those whom antiquarian subjects attract cannot fail to be hearty."

Notes and Queries.

"An interesting contribution to the science of 'bells.'"—*Spectator*.

"For what he has given us we are extremely thankful. His work is honest and thorough."

Academy.

"Useful and well written."—*British Archaeological Journal*.
